Graduate Attributes & Learning Outcomes

Introduction

As per the NHEQF, each student on completion of a programme of study must possess and demonstrate the expected **Graduate Attributes** acquired through one or more modes of learning, including direct in-person or face-to-face instruction, online learning, and hybrid/blended modes. The graduate attributes indicate the quality and features or characteristics of the graduate of a programme of study, including learning outcomes relating to the disciplinary area(s) relating to the chosen field(s) of learning and generic learning outcomes that are expected to be acquired by a graduate on completion of the programme(s) of study.

The graduate profile/attributes must include,

- capabilities that help widen the current knowledge base and skills,
- gain and apply new knowledge and skills,
- undertake future studies independently, perform well in a chosen career, and
- play a constructive role as a responsible citizen in society.

The graduate profile/attributes are acquired incrementally through development of cognitive levels and describe a set of competencies that are transferable beyond the study of a particular subject/disciplinary area and programme contexts in which they have been developed.

Graduate attributes include,

- **learning outcomes that are specific to disciplinary areas** relating to the chosen field(s) of learning within broad multidisciplinary/interdisciplinary/transdisciplinary contexts.
- **generic learning outcomes** that graduate of all programmes of study should acquire and demonstrate.

Graduate Attributes:

Table:7: The Learning Outcomes Descriptors and Graduate Attributes

Sl.no.	Graduate Attribute	The Learning Outcomes Descriptors (The graduates should be able to demonstrate the capability to:)
GA1	Disciplinary Knowledge	Acquire knowledge and coherent understanding Of the chosen disciplinary/interdisciplinary areas of study.

Sl. no.	Graduate Attribute	The Learning Outcomes Descriptors <i>(The graduates should be able to demonstrate the capability to:)</i>
GA2	Complex problem solving	Solve different kinds of problems in familiar and non-familiar contexts and apply the learning to real-life situations.
GA3	Analytical & Critical thinking	apply analytical thought including the analysis and evaluation of policies, and practices. Able to identify relevant assumptions or implications. Identify logical flaws and holes in the arguments of others. Analyse and synthesize data from a variety of sources and draw valid conclusions and support them with evidence and examples.
GA4	Creativity	create, perform, or think in different and diverse ways about the same objects or scenarios and deal with problems and situations that do not have simple solutions. Think ‘out of the box’ and generate solutions to complex problems in unfamiliar contexts by adopting innovative, imaginative, lateral thinking, inter personal skills, and emotional intelligence.
GA5	Communication Skills	listen carefully, read texts and research papers analytically, and present complex information in a clear and concise manner to different groups/audiences. Express thoughts and ideas effectively in writing and orally and communicate with others using appropriate media.
GA6	Research-related skills	Develop a keen sense of observation, inquiry, and capability for asking relevant/ appropriate questions. Should acquire the ability to problematize, synthesize and articulate issues and design research proposals, define problems, formulate appropriate and relevant research questions, formulate hypotheses, test hypotheses using quantitative and qualitative data, establish hypotheses, make inferences based on the analysis and interpretation of data, and predict cause-and-effect relationships. Should develop the ability to acquire the understanding of basic research ethics and skills in practicing/doing ethics in the field/ in personal research work.
GA7	Collaboration	work effectively and respectfully with diverse teams in the interests of a common cause and work efficiently as a member of a team.
GA8	Leadership readiness/qualities	plan the tasks of a team or an organization and setting direction by formulating an inspiring vision and building a team that can help achieve the vision.

GA9	Digital and technological skills	Use ICT in a variety of learning and work situations. Access, evaluate, and use a variety of relevant information sources and use appropriate software for analysis of data.
GA 10	Environmental awareness and action	mitigate the effects of environmental degradation, climate change, and pollution. Should develop the technique of effective waste management, conservation of biological diversity, management of biological resources and biodiversity, forest and wildlife conservation, and sustainable development and living.

Programme Learning Outcomes in B.Sc. Operation Theatre Technology

Program Learning Outcomes (PLO)

PLO1: Knowledge of Operation Theatre Technology

Possess an acquired scientific knowledge to become a healthcare professional.

PLO2: Develop complex problem solving skills

Demonstrate and solve technical complexities and to implement the preventive, assessment and management plans for quality health care services.

PLO3: Develop analytical & Critical thinking skills

Ability to think and act in stressful situation and apply the knowledge in emergency real life circumstances.

PLO4: Develop the ability to create

Possess creative skills to deal with difficult scenarios by adopting ingenious ways of achieving the goals without compromising the desired outcome.

PLO5: Develop effective Communication Skills

Practice soft skill and good communicating skills to effectively and appropriately communicate with the patients, clients, co workers and other health professionals with the OT, hospital and the community.

PLO6: Develop research-related skills

A sense of inquiry and investigation for raising relevant and contemporary questions, synthesizing and articulating.

PLO7: Develop the capability of team building

Ability to work effectively and respectfully with interdisciplinary team members to achieve coordinated, high quality health care.

PLO8: Develop leadership readiness/qualities

Ability to employ reflective thinking along with the ability to create the sense of awareness of one self and society.

PLO9: Develop digital and technological skills

Ability to use ICT in variety of situations and possess learning and applying digitally.

PLO10: - Develop environmental awareness and action

Possess knowledge and technicality to raise awareness for the benefit of the society.

Programme Specific Outcomes (PSO):

PSO 1: Students will be competent to work in various Operation Theatres. Students will understand the importance of the various departments of the hospital and their contribution to the well being of a patient.

PSO 2: Students will acquire in-depth knowledge of Anesthesia

PSO 3: This Program will create a great source of manpower which can, Surgery, Critical care and pain Management. Students will be skilled in problem solving, critical thinking and will be able to assist the Surgeon or Anesthetist. aid in our health sector especially in Operation Theatres. Students will be able to act on real life emergencies and apply their knowledge of assessment and management on various diseases and conditions.

PSO 4: Students will be able to explore new areas of research in both Anesthesia & Surgery and can also advance for research as well. Students will be able to explore their integrate knowledge of various types of Surgical Procedures & Anesthetic procedures.

The Qualification Specifications:

Table:8:NHEQF Qualification specifications

Qualification ype	Purpose of the qualification
Undergraduate Certificate	The students will be able to apply technical and theoretical concepts and specialized knowledge and skills in a broad range of contexts to undertake skilled or paraprofessional work and/or to pursue further study/learning at higher levels.
Undergraduate Diploma	The students will be able to apply specialized knowledge in arrange of contexts to undertake advanced skilled or Paraprofessional work and/or to pursue further learning/study at higher levels.
Bachelor's degree	The students will be able to apply a broad and coherent body of Knowledge and skills in arange of contexts to undertake professional work and/or for further learning.
Bachelor's degree (Honours/ Honours with Research)	The students will be able to apply the knowledge in a specific context to undertake professional work and for research and further learning.
	The students will be able to apply an advanced body of knowledge in a range of contexts to undertake professional work and apply specialized knowledge and skills for research and scholarship, and/or for further learning relating to the chosen field(s) of learning, work/vocation, or professional practice.
Master's degree (1 year/2 semesters of study)	The students will be able to apply an advanced body of knowledge in a range of contexts for professional practice, research, and scholarship and as a pathway for further learning. Graduates at this level are expected to possess and demonstrate specialized knowledge and skills for research, and/or professional practice and/or for further learning.

Master's degree (2 years /4 semesters of study)	The students will be able to apply an advanced body of knowledge in a range of contexts for professional practice, research, and scholarship and as a pathway for further learning. Graduates at this level are expected to possess and demonstrate specialized knowledge and skills for research, and/or professional practice and/or for further learning. Master's degree holders are expected to demonstrate the ability to apply the established principles and theories to a body of knowledge or an area of professional practice.
Doctoral degree	The Doctoral degree qualifies students who can ask relevant and new questions and develop appropriate methodologies and tools for collecting information in pursuit of generating new knowledge and new data sets; and apply a substantial body of knowledge to undertake research and investigations to generate new knowledge, in one or more fields of inquiry, scholarship or professional practice. Graduates at this level is expected to have a systematic and critical understanding of a complex field of learning and specialized research skills for the advancement of knowledge and/or professional practice and making a significant and original contribution to the creation of new knowledge relating to a field of learning or in the context of an area of professional practice.

Teaching Learning Process

Teaching and learning in this programme involves classroom lectures as well as tutorial and remedial classes.

Tutorial classes: Tutorials allow closer interaction between students and teacher as each student gets individual attention. The tutorials are conducted for students who are unable to achieve average grades in their weekly assessments. Tutorials are divided into three categories, viz. discussion-based tutorials (focusing on deeper exploration of course content through discussions and debates), problem-solving tutorials (focusing on problem solving processes and quantitative reasoning), and Q&A tutorials (students ask questions about course content and assignments and consolidate their learning in the guiding presence of the tutor).

Remedial classes: The remedial classes are conducted for students who achieve average and above average grades in their weekly assessments. The focus is laid to equip the students to perform better in the exams/assessments. The students are divided into small groups to provide dedicated learning support. Tutors are assigned to provide extra time and resources to help them understand concepts with advanced nuances. Small groups allow tutors to address their specific needs and monitor them. Following methods are adopted for tutorial and remedial classes:

- Written assignments and projects submitted by students
- Project-based learning
- Group discussions
- Home assignments
- Class tests, quizzes, debates organised in the department
- Seminars and conferences
- Extra-curricular activities like cultural activities, community outreach programmes etc.
- Field trip, excursions, study tour, interacting with eminent authors, etc.

Assessment Method

- 8.1 The Programme structures and examinations shall normally be based on Semester System. However, the Academic Council may approve Trimester/Annual System for specified programmes.
- 8.2 In addition to end term examinations, student shall be evaluated for his/her academic performance in a Programme through, presentations, analysis, homework assignments, term papers, projects, field work, seminars, quizzes, class tests or any other mode as may be prescribed in the syllabi. The basic structure of each Programme shall be prescribed by the Board of Studies and approved by the Academic Council.
- 8.3 Each Programme shall have a number of credits assigned to it depending upon the academic load of the Programme which shall be assessed on the basis of weekly contact hours of lecture, tutorial and laboratory classes, self-study. The credits for the project and the dissertation shall be based on the quantum of work expected.
- 8.4 Depending upon the nature of the programme, the components of internal assessment may vary. However, the following suggestive table indicates the distribution of marks for various components in a semester: -

	Component of Evaluation	Marks	Frequency	Code	Weightage (%)
A	Continuous Evaluation				
i	Analysis/Class test	Combination of any three from (i) to (v) with 5 marks each	1-3	C	25%
ii	Home Assignment		1-3	H	
iii	Project		1	P	
iv	Seminar		1-2	S	
v	Viva-Voce/Presentation		1-2	V	
vi	MSE	MSE shall be of 20 marks	1-3	Q/CT	
vii	Attendance	Attendance shall be of 5 marks	100%	A	5%
B	Semester End Examination		1	SEE	70%
	Project				100%

Bachelor of Operation Theater Technology
1st Semester

Subject Name: Anatomy-I (THEORY& PRACTICAL)

Course type: Major

Course Code: OTT242M101/ OTT242M111

Course Level: 100

L-T-P-C – 2-0-2-3

Scheme of Evaluation: (T+P)

Objective: This course will provide students in-depth instruction in the organization, structures, and functions of the human body. Students will learn the anatomic terminology of each body system and how they interrelate to maintain homeostasis.

On successful completion of the course the students will be able to:

CO	Course Outcome	Blooms Taxonomy Level
CO1	Understand the gross structures of the systems and organs of the human body.	BT 1
CO2	Communicate information related to these systems through written and verbal format in order to assess current knowledge, answer investigative questions, and explore new questions for additional research.	BT 2
CO3	Apply concepts and knowledge of the general terminology, cell structure and function, histology, gross anatomy of several organs to clinical	BT 3
CO4	Analyze the correct location of bones of the human skeleton and the human organs which is necessary for describing and assessing their status.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	<p>Introduction:</p> <ul style="list-style-type: none"> • Definition of anatomy and its divisions, Terms of location, positions and planes. • Cell and its organelles, Tissues & its classification, Glands. 	10hours
II.	<p>Musculoskeletal System:</p> <ul style="list-style-type: none"> • Structure of Bone & its types. • Joints- Classification of joints with examples; details of synovial joint. • Axial skeleton & appendicular skeleton • Bones of appendicular skeleton • Bones of axial skeleton • Locomotor system - bone , cartilage, ligaments and tendons • Skull, spine & its movements, intervertebral disc. <p>Muscles & its types.</p>	10 hours

Credit Distribution		
Theory/ Tutorial	Practicum	Experiential Learning
44 hours	30 hours	16 hours (Hospital visits, Demonstration, Case study)
III.	Gastro-Intestinal System: <ul style="list-style-type: none"> • Parts of the GIT - mouth, pharynx, oesophagus, stomach • Abdominal cavity - divisions and regions • Liver • Pancreas • Spleen • Gall Bladder • Intestine (small and large) 	12hours
IV.	Cardiovascular System: <ul style="list-style-type: none"> • Arteries & veins, Capillaries & arterioles. • Heart- size, location, chambers, blood supply of heart, pericardium. • Systemic & pulmonary circulation. • Major blood vessels of Heart. Lymphatic System: <ul style="list-style-type: none"> • Lymph and Lymph vessels. • Structure of lymph node, names of regional lymphatics, axillary and inguinal lymph nodes. 	12hours
TOTAL		44hours

ANATOMY-I Practical

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	<ul style="list-style-type: none"> • Introduction of the human body. • Organisation of tissues of the body. • Planes of the human body. 	7.5 hours
II.	<ul style="list-style-type: none"> • Demonstration of all bones of the human body. • Cavities of the human body. • Body Movement terminology. 	7.5 hours
III.	<ul style="list-style-type: none"> • Identification of the quadrants and regions of the body. • Arteries and Veins • Bone, muscles (Skeletal, smooth, cardiac) 	7.5 hours
IV.	<ul style="list-style-type: none"> • Heart • Kidney • Liver • Stomach 	7.5 hours
TOTAL		30 hours

Subject Name: Physiology-I (Theory&Practical)

Course type: Major

Course Code: OTT242M102/ OTT242M112

Course Level: 100

L-T-P-C – 2-0-2-3

Scheme of Evaluation: (T+P)

Objective: The objective of this course is to provide exposure to the students on cells, structural and functional units of living organisms, and their intricate organization. Moreover, they will learn the functions and vital processes of an organism/an organ /system of organs.

On successful completion of the course the students will be able to:

CO	Course Outcome	Blooms Taxonomy Level
CO1	Relate and understand deep insight into homeostatic mechanisms and the functions of the various organs and organ systems in humans. They will also be able to understand how physiological parameters are measured in humans and animal preparations including blood parameters.	BT 1
CO2	Compare the physiological aspects of normal growth and development.	BT 2
CO3	Apply physiologic knowledge to narrate the contribution of each organ system to the maintenance of homeostasis.	BT 3
CO4	Utilize scientific laboratory equipment in order to gather and analyze data on human anatomy and physiology.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	Blood <ul style="list-style-type: none">• Red Blood Cells- functions, count, physiological and pathological variations. Erythropoiesis-stages.• Hemoglobin-Functions, Physiological variations.• White Blood cells-Functions, count, morphology.• Platelets-count, morphology, functions.• Hemostasis-Definition, Mechanism, clotting factors.• Blood groups-ABO system, Rh system, Blood transfusion-Indication, transfusion reactions.• Anaemia-classification, effects of anaemia on body.	10 hours
II.	Gastro- Intestinal System <ul style="list-style-type: none">• Physiological Anatomy, functions of GIT.• Salivary Gland-functions of saliva.• Stomach-structure and functions, Gastric secretions-composition, functions, Mechanism• Pancreas-structure, functions, composition of Pancreatic juice.• Liver-Functions of liver.• Bile-Composition, functions.	14 hours

	<ul style="list-style-type: none"> • Jaundice-Types and its causes. • Gall Bladder- Functions • Intestine-Movements of small and large intestine. • Digestion and Absorption of Carbohydrates, Proteins, Fats. • Hormones of GIT-Functions of Gastrin, Secretin. 	
III.	Cardiovascular System <ul style="list-style-type: none"> • Heart-Physiological Anatomy, Nerve supply, Properties of cardiac muscle. • Cardiac Cycle-Events—systole, diastole. • Cardiac Output-Definition and factors affecting it. 	10hours
IV.	Excretory System <ul style="list-style-type: none"> • Kidneys-structure of nephron, functions of kidney. • Glomerular filtration Rate(GFR) and factors affecting it. • Urine formation. • Renal function test. 	10hours
TOTAL		44hours

**PHYSIOLOGY-I Practical

Subject Name: Hospital Duty and Patient Care (THEORY)

Course type: MINOR

Course Code: OTT242N101

Course Level: 100

L-T-P-C – 3-0-0-3

Scheme of Evaluation: (T)

Objective: This syllabus has been formulated to impart knowledge on assessment, identification and management of patients suffering from common conditions and the drugs commonly administered. It also emphasized on the sterilization techniques and its importance.

On successful completion of the course the students will be able to:		
CO	Course Outcome	Blooms Taxonomy Level
CO1	List and identify, assess, manage life threatening conditions in or out hospital.	BT 1
CO2	Outline the different most common life threatening conditions perceived during pre- operative assessment and assemble a management plan.	BT 2
CO3	Apply knowledge of sterilization and its essentials in the Operation Theatre and the hospital.	BT 3
CO4	Categorize certain drugs and their uses for medical purposes.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	<p>Hospitals:</p> <ul style="list-style-type: none"> • Introduction, Functions of Hospitals. • Classification of Hospitals. • Organization of Hospitals. • Department of Hospitals. • Management of Hospitals. • Different services in a Hospital. <p>Records and Reports:</p> <ul style="list-style-type: none"> • Definition, Different types of records. • Values & Objectives. • Maintenance of records. • Principle of good record writing. • Difference of records & reports. 	16 hours
II.	<p>First Aid:</p> <ul style="list-style-type: none"> • Introduction, Aims & objectives of first aid. • Priorities of first aid. • Golden rules of first aid. • Qualities & responsibilities of first aider. • Simple first aid measures in selected conditions like – Food poisoning, Snake bite, Scorpion bite, Dog bite, Foreign bodies in various organs, • Burns & scalds. <p>Hygiene:</p>	18 hours

	<ul style="list-style-type: none"> • Personal Hygiene. • Maintenance of Hygiene. • Maintaining therapeutic environment. <p>Vital Signs of Patients:</p> <ul style="list-style-type: none"> • Blood Pressure • Temperature • Pulse • Respiration 	
III.	<p>Hyperglycemia:</p> <ul style="list-style-type: none"> • Definition, Clinical features, Diabetes laboratory tests for diabetes. <p>Hypoglycemia:</p> <ul style="list-style-type: none"> • Definition, Etiology & Clinical Features, Investigations for hypoglycemia. <p>Hemorrhage:</p> <ul style="list-style-type: none"> • Internal haemorrhage. • External haemorrhage. <p>Shock:</p> <ul style="list-style-type: none"> • Definition. • Types of shock. • Management of shock. <p>Poisoning:</p> <ul style="list-style-type: none"> • Definition, Causes of poisoning, Sources of Poisoning, Symptoms of poisoning, First aid & Management, Antidotes, Common drugs poisoning, Carbon monoxide poisoning. 	14 hours
IV.	<p>Drugs:</p> <ul style="list-style-type: none"> • Definition, Names & classification of drugs, Different preparations of drugs, Effects of drugs, Adverse effects of drugs, Tolerance, Abuse, addiction of drugs, Different routes of drug administration, Storing of medicine, Units of standard measurement. <p>Sterilization techniques:</p> <ul style="list-style-type: none"> • Definition, types, methods, CSSD, Nosocomial infection, Infection control in the Operation Theatre. <p>Safety in the laboratory:</p> <p>Common laboratory accidents, physical injuries, electrical shock, chemical injury, bleeding, burn, eye accidents, biological hazards.</p>	12 hours

Paper I/Subject Name: Introduction to Indian Knowledge System - I
Subject Code: IKS992I101
L-T-P-C – 2-1-0-3
Credit Units: 3
Course Level: 100
Scheme of Evaluation: Theory (70%) + Continuous Evaluation (30%)

Course objectives:

This Foundation course is designed to present an overall introduction to all the streams of IKS relevant to the UG program. It would enable students to explore the most fundamental ideas that have shaped Indian Knowledge Traditions over the centuries.

Course Outcomes:

On completion of this course students will be able to –

CO	Contents	BT Level
CO1	Recall the rich heritage of Indian knowledge systems	BT level 1
CO2	Describe the contribution of Indian knowledge systems to the world	BT level 2
CO3	Demonstrate knowledge of sociocultural and ethnolinguistic diversity that constitutes the soul of Bharatvarsha	BT level 2
CO4	Apply traditional knowledge and techniques in day-to-day life	BT level 3
CO5	Distinguish knowledge traditions that originated in the Indian subcontinent	BT level 3

Module	Course Contents	Periods
I	<p>Introduction to Indian Knowledge Systems (IKS): -What is the Indian Knowledge System? -Definition of Indigenous/ Traditional Knowledge -Scope, and Importance of Traditional Knowledge.</p> <p>Ancient India- Bharat Varsha: -People of Ancient Bharat Varsha -Our great natural heritage: The great Himalayas and the rivers. - The civilizations of the Sindhu-Ganga valley, and the Brahmaputra valley. -Our coastal plains. -Our Nature: Forests and Minerals -Ancient Indian Traditional Knowledge and Wisdom about nature and climate.</p>	15
II	<p>Indian Heritage of Knowledge: -Ancient Indian Knowledge: The <i>Vedas</i> and its components-the <i>Vedangas</i> -Ancient Indian books and treaties: The <i>Sastras</i>. -The Great Indian Epics: The Ramayana and The Mahabharata, -Epics and religious treaties of ancient Assam: Introduction to Madhav Kandali's <i>Ramayana</i> and Srimanta Sankardev's <i>Dasam Skandha Bhagavat</i> of the Puranas. -Ancient Traditional Knowledge-The <i>Agamas</i></p>	15

	<p>-The ancient Buddhist knowledge: <i>Tripitaka: Vinaya, Sutta</i> and <i>Abhidhamma Pitaka</i></p> <p>Languages and language studies in India:</p> <p>-What is linguistics?</p> <p>-Script and Language</p> <p>-Alphabet of the Indian languages <i>Varnamala</i>: Origin, Evolution, and phonetic features.</p> <p>-Languages of India</p> <p>-Important texts of Indian languages: Skills <i>Siksha</i>, Expression/Pronunciation-<i>Nirukta</i>, Grammar-<i>Vyakarana</i>, Poetic rhythm-<i>Chandas</i>.</p> <p>-Paninian Grammar: A Brief Introduction</p> <p>Introduction to Fine Arts and Performing Arts of India:</p> <p>-Ancient Indian classical music and dance forms: The Science of Dramas-<i>Natyasastra</i> and the Science of Music-<i>Gandharva-Veda</i>.</p> <p>-<i>Aesthetics in Indian Art and Culture</i>.</p> <p>-Folk music and traditional dance forms of the Northeast.</p>	
III	<p>Indian Science & Technology</p> <p>-Ancient India's contribution to Mathematics- Number System. Algebra and Arithmetic, Geometry and Trigonometry.</p> <p>-Origin of Decimal system in India; nomenclature of numbers in the Vedas. Zero and Infinity. Sulba-sutras. Contribution of Brahmagupta and Sridhar Acharya to Mathematics. Important texts of Indian mathematics.</p> <p>□ Indian Astronomy: Planetary System. Motion of the Planets. Velocity of Light. Eclipse. Astronomy. Navagrahas. Important works in Indian Astronomy. Aryabhata and Nilakantha: Contribution to Astronomical Studies</p> <p>□ Indian Metal Works: Mining Techniques. Types of Metals. Tools & Techniques for Metal Smelting with examples. Metalworks in pre-modern India: Special reference to NE India.</p>	15
IV	<p>Contribution of Ancient India to Health Sciences:</p> <p>-Traditional Indigenous systems of medicines in India:</p> <p>- <i>Ayurveda</i> and <i>Yoga</i>: Elements of <i>Ayurveda: Gunas</i> and <i>Doshas, Pancha Mahabhuta</i> and <i>Sapta-dhatu</i>.</p> <p>-Concept of disease in Ayurveda</p> <p>-Ayurvedic lifestyle practices: <i>Dinacharya</i> and <i>Ritucharya</i>.</p> <p>-Important Ayurvedic Texts</p> <p>-Hospitals in Ancient India</p> <p>□-<i>Ayurveda</i>: Gift of India to the modern world.</p>	15
EL	<p>The experiential learning sessions may include:</p> <p>□ Field Visits: Organizing visits to historical sites, museums, traditional craft centers, and other places relevant to Indian knowledge systems.</p> <p>□ Interactive Sessions: Engaging students in discussions with experts and practitioners in various fields of Indian knowledge systems to gain insights and practical knowledge.</p> <p>□ Online Lecture Series: Providing the students with online lectures by distinguished experts in the field of the Indian Knowledge System.</p> <p>□ Hands-on Activities: Providing opportunities for students to participate in activities related to traditional arts, crafts, music, dance, agriculture, etc., to understand the practical aspects of Indian knowledge systems.</p>	30

	<input type="checkbox"/> Practical Demonstrations: Conducting workshops or sessions to demonstrate traditional practices, such as yoga, Ayurveda, Vastu Shastra, etc., for the students.

Semester: 1st

Type of Course: AEC (w.e.f.2023-24) UG Programme

Course Code: CEN982A101

Course Title: CENI: Introduction to Effective Communication

Total credits: 1 **Course level:** 100; **L-T-P** 1-0-0

Scheme of Evaluation: Theory and Practical

Course Objective: To understand the four major aspects of communication by closely examining the processes and outlining the most effective ways to communicate with interactive activities.

Course Outcomes: On successful completion of the course the students will be able to

CO Level	Course Outcome	Blooms Taxonomy Level
CO1	List the elements and processes that make for successful communication and recognize everyday activities that deserve closer attention in order to improve communication skills	BT1
CO2	Contrast situations that create barriers to effective communication And relate them to methods that are consciously devised to overcome such hindrance	BT2
CO3	Apply language, gestures, and paralanguage effectively to avoid miscommunication and articulate one's thoughts and build arguments more effectively	BT3

Detailed Syllabus		
Units	Course Contents	Periods
I	Introduction to Effective Communication <ul style="list-style-type: none"> • Listening Skills <ul style="list-style-type: none"> ○ The Art of Listening ○ Factors that affect Listening ○ Characteristics of Effective Listening ○ Guidelines for improving Listening skills 	5
II	<ul style="list-style-type: none"> • Speaking Skills <ul style="list-style-type: none"> ○ The Art of Speaking ○ Styles of Speaking ○ Guidelines for improving Speaking skills ○ Oral Communication: importance, guidelines, and barriers 	5

III	<ul style="list-style-type: none"> • Reading Skills <ul style="list-style-type: none"> ○ The Art of Reading ○ Styles of Reading: skimming, surveying, scanning ○ Guidelines for developing Reading skills 	5
IV	<ul style="list-style-type: none"> • Writing Skills <ul style="list-style-type: none"> ○ The Art of Writing ○ Purpose and Clarity in Writing ○ Principles of Effective Writing 	5

Subject Name: Behavioural Sciences -1 UG 1st semester

Course code:BHS982A104

Course level: 100

Credit: 1

L-T-P: 1-0-0

Course objectives: To increase one's ability to draw conclusions and develop inferences about attitudes and behaviour, when confronted with different situations that are common in modern organizations.

Course Outcomes: On completion of the course the students will be able to :

CO1: Understand self & process of self exploration

CO2: Learn about strategies for development of a healthy self esteem

CO3: Apply the concepts to build emotional competencies.

Detailed Syllabus:

Modules	Course Contents	Periods
I	Introduction to Behavioral Science Definition and need of Behavioral Science, Self: Definition components, Importance of knowing self, Identity Crisis, Gender and Identity, Peer Pressure, Self image: Self Esteem, Johari Window ,Erikson's model.	4
II	Foundations of individual behavior Personality- structure, determinants, types of personalities. Perception: Attribution, Errors in perception. Learning- Theories of learning: Classical, Operant and Social	4
III	Behaviour and communication. Defining Communication, types of communication, barriers to communication, ways to overcome barriers to Communication, Importance of Non-Verbal Communication/Kinesics, Understanding Kinesics, Relation between behaviour and communication.	4
IV	Time and Stress Management Time management: Introduction-the 80:20, sense of time management, Secrets of time management, Effective scheduling. Stress management: effects of stress, kinds of stress-sources of stress, Coping Mechanisms.	4

	Relation between Time and Stress.

Subject Name: Biochemistry
Course type: SEC
Course Code: OTT242S101/ OTT242S111
Course Level: 100

L-T-P-C – 2-0-2-3

Scheme of Evaluation: (T+P)

Objective: This course is designed to introduce the organic structure of living systems mainly dealing with biomolecules like carbohydrates, proteins, lipids, and nucleic acids laying the foundation for other advanced courses like physiology, cell biology, molecular biology, and immunology. The scope of the subject is providing biochemical facts and the principles to understand metabolism of nutrient molecules in physiological and pathological conditions.

On successful completion of the course the students will be able to:		
CO	Course Outcome	Blooms Taxonomy Level
CO1	Define the role of biomolecules and their functions.	BT 1
CO2	Understand the integration of the various aspects of metabolism, and their regulatory pathways.	BT 2
CO3	Identify the synthesis of proteins, lipids, nucleic acids, and carbohydrates and their role in metabolic pathways along with their regulation at the epigenetic, transcriptional, translational, and post-translational levels including RNA and protein folding, modification, and degradation.	BT 3
CO4	Analyze structural-functional relationships of genes and proteins.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	Carbohydrates: <ul style="list-style-type: none"> • Definition and classification of carbohydrates. • Common carbohydrates (Glucose, Fructose, Starch, Glycogen, Starch) and their sources. • Biological significance of Carbohydrate. • Properties of carbohydrates. 	6 hours
II.	Lipids: <ul style="list-style-type: none"> • Definition and classification of lipids. • Classification of Fatty Acids • Examples and functions of some common lipids (Phospholipids, Glycolipids, Steroid). 	6 hours

III.	Nucleic Acids: <ul style="list-style-type: none"> • Basic idea of the structure of DNA and RNA • Function of DNA and RNA. • Types of RNA and DNA. • Chargaff's Rule. 	6 hours
IV.	Proteins: <ul style="list-style-type: none"> • Definition of Proteins along with the Biological significance. • Amino acids and its classification. • Essential and Non-essential amino acids. Acid-Base Buffers: <ul style="list-style-type: none"> • Basic idea of acids, bases, pH, buffer, Acid base balance. Enzymes : <ul style="list-style-type: none"> • Definition and classification of enzyme. • Basic idea of co-enzyme, iso- enzyme. • Mechanism of enzyme Action, Factors affecting enzyme action. 	12 hours
Total		44hours

BIOCHEMISTRY PRACTICAL
Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	Identifications of instruments and Glasswares.	7.5hrs
II.	Qualitative analysis of Carbohydrates –Molisch's test, Benedict's test, Barfoed's test, Fehling's test, Seliwanoff's test, Bial's test, Iodine test.	7.5hrs
III.	Qualitative analysis of Proteins - Precipitation Reaction, Heller's Test, Heat and Acidic Test.	7.5hrs
IV	Qualitative analysis of Lipids – Solubility test.	7.5hrs
		30 hr

Bachelor of Operation Theater Technology
2nd Semester

Subject Name: Anatomy- II (THEORY+ PRACTICAL)

Course type: Major

Course Code: OTT242M201/ OTT242M211

Course Level: 100

L-T-P-C – 2-0-2-3

Scheme of Evaluation: (T+P)

Objective: This course will provide students in-depth instruction in the organization, structures, and functions of the human body. Students will learn the anatomic terminology of each body system and how they interrelate to maintain homeostasis.

On successful completion of the course the students will be able to:		
CO	Course Outcome	Blooms Taxonomy Level
CO1	Recall the gross structures of the systems and organs of the human body.	BT 1
CO2	Illustrate the information related to these systems through written and verbal format in order to assess current knowledge, answer investigative questions, and explore new questions for additional research.	BT 2
CO3	Apply concepts and knowledge of the general terminology, cell structure and function, histology, gross anatomy of several organs to clinical scenarios.	BT 3
CO4	Analyze and identify the correct location of bones of the human skeleton and the human organs which is necessary for describing and assessing their status.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	Respiratory System: <ul style="list-style-type: none"> • Parts of Respiratory system • Structure of nose, nasal cavity, larynx, trachea, lungs, pleural, broncho pulmonary segments. Urinary System: <ul style="list-style-type: none"> • Parts of Urinary system, location and gross structure of kidney, ureter, urinary bladder, urethra. 	11hours

II.	<p>Endocrine glands:</p> <ul style="list-style-type: none"> Name of all endocrine glands, gross structure & functions of pituitary gland, adrenal gland, thyroid gland and parathyroid gland. <p>Reproductive System:</p> <ul style="list-style-type: none"> Parts of male reproductive system, gross structure of testis, vas deferens, epididymis, prostate. Parts of female reproductive system, gross structure of uterus, ovary, fallopian tube, mammary gland. 	11 hours
III.	<p>Nervous System:</p> <ul style="list-style-type: none"> Neuron, classification of NS. Meninges, ventricles, CSF. Gross features of cerebrum, midbrain, pons, medulla oblongata, cerebellum, name of basal nuclei. Blood supply of brain, cranial nerves. Spinal cord and spinal nerves. Autonomic nervous system. Visual & auditory pathways 	11hours
IV.	<p>Sensory Organs:</p> <ul style="list-style-type: none"> Skin & its appendages. Structure of eye & lacrimal apparatus, name of extra ocular muscles. Structure of ear: external, middle & inner ear. 	11 hours
TOTAL		44hours

Semester: 2nd Type of Course: AEC (w.e.f.2023-24) UG Programme Course Code: CEN982A201 Course Title: CENII: Approaches to Verbal and Non-Verbal Communication Course level:100, Credits: 1, L-T-P:1-0-0, Scheme of Evaluation: Theory and Practical
--

Course Objectives

To introduce the students to the various forms of technical communication and enhance their knowledge in the application of both verbal and non-verbal skills in communicative processes.

Course Outcomes

On successful completion of the course the students will be able to:		
CO Level	Course Outcome	Blooms TaxonomyLevel
CO1	List the different types of technical communication, their characteristics, their advantages and disadvantages.	BT1
CO2	Explain the barriers to communication and ways to overcome them.	BT2
CO3	Identify the means to enhance conversation skills.	BT3
CO4	Determine the different types of non-verbal communication and their significance.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I	Technology Enabled Communication Communicating about technical or specialized topics, Different forms of technology-enabled communication tools used in organizations Telephone, Teleconferencing, Fax, Email, Instant messaging, Blog, Podcast, Videos, videoconferencing, social media	4
II	Communication Barriers Types of barriers: Semantic, Psychological, Organisational, Cultural, Physical, Physiological, Methods to overcome barriers to communication.	4
III	Conversation skills/Verbal Communication Conversation – Types of Conversation, Strategies for Effectiveness, Conversation Practice, Persuasive Functions in Conversation, Telephonic Conversation and Etiquette Dialogue Writing,Conversation Control.	4
IV	Non-verbalCommunication Body language-Personal Appearance, Postures, Gestures, Eye Contact, Facial expressions Paralinguistic Features-Rate, Pause, Volume, Pitch/Intonation/ Voice/Modulation, Proxemics, Haptics, Artifacts, Chronemics,	4

Subject Name: Behavioural Sciences II UG 2nd semester

Course code: BHS982A204

Course level: 100

Credit: 1

L-T-P: 1-0-0

Course objectives: To increase one's ability to draw conclusions and develop inferences about attitudes and behaviour, when confronted with different situations that are common in modern organizations.

Course outcomes: On completion of the course the students will be able to:

CO 1: Develop an elementary level of understanding of culture and its implications on personality of people.

CO2: Understand the concept of leadership spirit and to know its impact on performance of employees.

CO3: Understand and apply the concept of Motivation in real life.

Detailed Syllabus:

	Course Contents	Periods
I	<p>Culture and Personality</p> <p>Culture: Definition, Effect, relation with Personality, Cultural Iceberg, Overview of Hofstede's Framework, Discussion of the four dimensions of Hofstede's Framework.</p>	4
II	<p>Attitudes and Values</p> <p>Attitude's definition: changing our own attitudes, Process of cognitive dissonance Types of Values, Value conflicts, Merging personal and Organisational values</p>	4

III	<p>Motivation</p> <p>Definition of motivation with example, Theories of Motivation (Maslow, McClelland's theory & Theory X and Y)</p>	4
IV	<p>Leadership</p> <p>Definition of leadership, Leadership continuum, types of leadership, Importance Leaders as role models.</p>	4

Course type: Major

Course Code: OTT242M303

Course Level: 200

L-T-P-C – 3-1-0-4

Scheme of Evaluation: (T)

Objective:The learning objectives are designed to provide a thorough grasp of the significance of preoperative assessment and patient preparation in assessing Anaesthesia risks and planning appropriate care. The design, components, and performance of the anaesthesia machine, safety systems, fluid management strategies, emergency drugs, anaesthetic induction and airway management procedures, and airway devices are all covered in this course.

It also discusses the principles of balanced anaesthesia, the administration of inhalation and intravenous anaesthetics, vital sign monitoring techniques, depth of anaesthesia, and oxygenation.

On successful completion of the course the students will be able to:		
CO	Course Outcome	Blooms Taxonomy Level
CO1	List the different equipments use for patient assessment in anaesthesia.	BT 1
CO2	Compare normal and abnormal rhythm of the hear.	BT 2
CO3	Identify any underlying conditions that can abrupt the surgery.	BT 3
CO4	Examine the different equipments before aanesthesia administration and surgery.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	<ul style="list-style-type: none"> Preoperative assessment and patient preparation: Understanding the importance of preoperative evaluations, patient history, and physical examinations to assess Anaesthesia risks and plan appropriate care. 4th semester

Subject Name: CSSD and Surgical Procedures (THEORY+PRACTICAL) Course Code: OTT242M401/OTT242M411 Course Type: Major L-T-P-C – 3-0-2-4	Scheme of Evaluation: (T+P)
--	------------------------------------

Objective: The aim of this course is to equip students with the knowledge and skills required for the proper sterilization, storage, and distribution of surgical instruments through CSSD practices, and to assist in and perform safe, efficient surgical procedures while adhering to aseptic techniques and infection control protocols.

On successful completion of the course the students will be able to:		
CO	Course Outcome	Blooms Taxonomy Level
CO1	Define the basic concepts of sterilization, disinfection, and the role of CSSD in maintaining surgical asepsis.	BT 1
CO2	Illustrate the workflow of a typical surgical procedure, including preoperative, intraoperative, and postoperative protocols.	BT 2
CO3	Demonstrate the preparation of the operating room, patient draping, and assisting surgeons during surgical procedures.	BT 3
CO4	Evaluate the effectiveness of aseptic practices and identify potential risks in surgical procedures to mitigate infection and ensure patient safety.	BT 4

Detailed syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	Sterilization and Disinfection <ul style="list-style-type: none"> • Principles of sterilization and disinfection • Role of CSSD in Healthcare • Central Pipeline System Methods of sterilization: <ul style="list-style-type: none"> • Dry Sterilization. • Moist sterilization. • Gaseous sterilization. • Chemical sterilization. • Sterilization by radiation (Gamma rays, ultraviolet rays) • New methods of Sterilization 	11 hours
II.	Pre-Operative Phase <ul style="list-style-type: none"> • Preoperative Patient preparation • Preoperative fasting guidelines • Premedication • Preoperative Investigations • Surgical Safety Checklist 	11 hours

	<p>Intraoperative Phase</p> <ul style="list-style-type: none"> • Principles of asepsis • Handling and Passing instruments • Classification of Surgical Instruments <p>Postoperative Phase</p> <ul style="list-style-type: none"> • PACU • Wound care and Management • Pain Management • Discharge criteria • Documentation 	
III.	<ul style="list-style-type: none"> • Instruments used for making Incision. • Excision of subcutaneous lipoma, I and D, Muscle Biopsy. • Cholecystectomy • Pancreaticoduodenectomy (Whipple Procedure) • Hepatic Resection • Gastrectomy • Appendectomy 	11 hours
IV.	<ul style="list-style-type: none"> • Transurethral Resection of Prostate (TURP) • Anal Fistulotomy and Fissurectomy • Open Reduction and Internal Fixation • Total knee Replacement • Total Hip Replacement • Craniotomy • Laminectomy 	11 hours
TOTAL		44 hours

CSSD and Surgical Procedures (Practical)

Subject Name: Microbiology and Pathology (THEORY+PRACTICAL)

Course type: Major

Course Code: OTT242M402/ OTT242M412

Course Level: 100

L-T-P-C – 3-0-2-4

Scheme of Evaluation: (T+P)

Objective: The objective of this course is to provide exposure to the students on cells, structural and functional units of living organisms, and their intricate organization. Moreover, they will learn the functions and vital processes of an organism/an organ /system of organs.

On successful completion of the course the students will be able to:

CO	Course Outcome	Blooms Taxonomy Level
CO1	Relate and understand deep insight into homeostatic mechanisms and the functions of the various organs and organ systems in humans. They will also be able to understand how physiological parameters are measured in humans and animal preparations including blood parameters.	BT 1
CO2	Compare the physiological aspects of normal growth and development.	BT 2
CO3	Apply physiologic knowledge to narrate the contribution of each organ system to the maintenance of homeostasis.	BT 3
CO4	Utilize scientific laboratory equipment in order to gather and analyze data on human anatomy and physiology.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	<ul style="list-style-type: none">Bacteria: Cell structure, elementary idea about classification and morphological basis. Staining reactions: Gramstaining, spore staining, acid fast staining. Bacterial growth: nutritional requirements, physical factor affecting, culture media, and growth curve. Elementary idea about bactericidal agents: Phenol, alcohol.Sterilization (principles, types & methods). Pasteurization. Antibiotics: Bacteriostatic and bactericidal effects.Virus: elementary knowledge of viral-morphology, viral genome and classification, viral replication. Herpesviruses, hepatitis viruses, miscellaneous viruses, human immunodeficiency viruses.	10 hours
II.	<ul style="list-style-type: none">Microbial growth & death, Laboratory culture, host pathogen interactions, antimicrobial chemotherapy, pathogenic mechanisms common to external ocular infections process – clinical pathology.Physiology, pathology, treatment & epidemiology of infectious diseases caused by bacteria, virus, fungi & parasitic organisms in hot climate as in India.	12 hours

III.	<p>General Pathology</p> <ul style="list-style-type: none"> • Structure & function of immune system – Structure and function of thymus, spleen & red bone marrow- Immunity& its types , plasma proteins & immune reaction, cells involved in immune system. Humoral immunity theories of antibodies formation. • Structure & function of lymph nodes. Structure & function of thymus, spleen & red bone marrow. • Non specific immunity, Antibody mediated immunity, specific immunity, cell mediated immunity, Active immunity, Passive immunity. • The acute inflammatory reaction – changes in acute inflammation, changes in the calibre of the blood vessels, changes in blood flow, changes associated with exudation. 	12 hours
IV.	<p>Inflammation & Repair:</p> <ul style="list-style-type: none"> • Inflammation. Role of the mast cell in inflammation. Role of the platelets in inflammation. Chronic inflammation– cause, classification, general features. • Source of infection. Transmission of organisms to the body. wound infections. Wound healing. • Immuno-pathogenesis – type I, II, III & IV hypersensitivity. Mechanism of autoimmunity. Organ specific & nonorgan specific auto immune disease. The HLA system – histocompatibility complex. Pyogenic & bacterial infection. • Disorder of growth – metaplasia, dysplasia, neoplasia. Circulatory disturbances – thrombosis, infarction, ischemia, embolism. Degeneration (calcification). 	10 hours
TOTAL		44hours

Course type: Major

Course Code: OTT242M403

Course Level: 200

L-T-P-C – 4-0-0-4

Scheme of Evaluation: (T)

Objective: To provide students with comprehensive knowledge and skills in managing women's health, including reproductive, maternal, and neonatal care. It emphasizes diagnosing and treating gynecological conditions and conducting surgical procedures like cesarean sections, hysterectomies, and laparoscopies. The focus is on delivering patient-centered care through evidence-based practices and surgical expertise.

On successful completion of the course the students will be able to:		
CO	Course Outcome	Blooms Taxonomy Level
CO1	Recall the anatomy and physiology of the female reproductive system and the stages of normal pregnancy, labor, and postpartum.	BT 1
CO2	Explain the etiology, clinical features, and management of common gynecological disorders and complications of pregnancy and childbirth.	BT 2
CO3	Demonstrate the ability to assist in basic obstetric and gynecological procedures, including normal deliveries and minor	BT 3
CO4	Analyze patient histories, diagnostic findings, and treatment options to plan and prioritize care in obstetric and gynecological emergencies.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	Amenorrhea, Physiology of Pregnancy Normal delivery, Forceps delivery Twin pregnancy, Fetal Presentations, Ectopic pregnancy Complications related to pregnant women: Supine hypotension syndrome of pregnancy, Mendelson syndrome of pregnancy, Eclampsia/Pre-eclampsia, PPH.	14 hours
II.	Birth control methods & Procedures Medical termination of pregnancy Instruments & Techniques of MTP	

	<p>GYNECOLOGY: Clinical methods in gynecological examination Common diseases of vulva, vagina Disorders of menstruation Various operative positions</p> <p>Disorders of the female reproductive system: Endometriosis Myoma formation Tubal blockage Cyst formation Abnormal menstruation STD's</p>	16 hours
III.	<p>Normal Labor: Normal labor and delivery, Intrapartum fetal monitoring, Induction of labor, Obstetric Analgesia and Anesthesia.</p> <p>Abnormal Labor: Abnormal uterine action in labor Abnormal labor patterns Prolonged labor Obstructed labor Dystocia Complications of the third stage of labor Injuries to the birth canal</p>	14 hours
IV.	<p>Diagnostic procedures in gynecology and obstetrics: Culdoscopy Hysteroscopy Endometrial tissue biopsy</p> <p>Surgical procedures: Incisions given in gynecology procedure Episiotomy, D&C, D&E, MTP Caesarean section, Tubal ligation Abdominal and vaginal hysterectomy Myomectomy, Oophorectomy Lap. Assisted vaginal hysterectomy, Tubectomy.</p>	16 hours

Fifth Semester

Subject Name: Specialized anesthesia and surgery (Theory+ Practical)

Course Code: OTT242M501/OTT242M511

Course Type: Major

Course Level: 300

L-T-P-C – 3-0-2-4

Scheme of Evaluation: (T+P)

Objective: The objective of **Specialized Anesthesia and Surgery** is to provide in-depth knowledge of advanced anesthesia techniques and their applications in complex surgical procedures. It aims to develop critical skills in patient assessment, anesthesia administration, and perioperative management for specialized surgeries. The course also emphasizes safety protocols, complication management, and evidence-based practices to enhance patient outcomes.

On successful completion of the course the students will be able to:		
CO	Course Outcome	Blooms Taxonomy Level
CO1	<i>Recall</i> the classification, indications, and contraindications of different anesthesia techniques.	BT 1
CO2	<i>Describe</i> the perioperative roles and responsibilities of the anesthesia and surgical team.	BT 2
CO3	<i>Demonstrate</i> the correct airway management techniques and anesthesia equipment usage.	BT 3
CO4	<i>Analyze</i> patient conditions and choose appropriate anesthesia techniques for specialized surgeries.	BT 4

1. Basic Life Support (BLS) Provider Manual, 2020 Guidelines by M. Masterbbjork (MD) and S. Meloni (MD), Medical Creations.
2. Basic Life Support- An Atlas Based Approach by Dr. Rakesh Kumar and Dr. Shakti Datt Sharma, Arya Publications.

Subject Name: Medical Emergencies (Theory) Course Code: OTT242M503 Course Type: Major Course Level: 300 L-T-P-C – 3-1-0-4	Scheme of Evaluation: (T)
--	----------------------------------

Objective: The student demonstrates the ability to conduct a focused medical history and targeted physical examination appropriate to the patient’s chief complaints and the history of the present illness and apply appropriate clinical pharmacological principles in the selection of drugs to treat common problems.

On successful completion of the course the students will be able to:		
CO	Course Outcome	Blooms Taxonomy Level
CO1	Recall the fundamental concepts of medical emergencies, including emergency response protocols, triage, and basic life support (BLS & ALS).	BT 1
CO2	Explain the pathophysiology and clinical presentation of cardiovascular, respiratory, neurological, and trauma-related emergencies.	BT 2
CO3	Demonstrate the ability to perform airway management, CPR, administration of emergency medications, and wound care in various emergency scenarios..	BT 3
CO4	Differentiate between different types of shock, poisoning, and endocrine emergencies to determine appropriate diagnostic and treatment approaches.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	General Principles of Medical Emergencies <ul style="list-style-type: none"> • Introduction to Medical Emergencies • Emergency Response Systems (BLS & ALS) • Triage and Initial Assessment (ABCDE Approach) • Airway Management and Oxygen Therapy • Shock: Types, Recognition, and Management • Legal and Ethical Aspects in Emergency Care • Medical Documentation in Emergencies 	11 hours

	<ul style="list-style-type: none"> • Communication in Emergency Situations • Infection Control and Safety Precautions 	
II.	<p>Cardiovascular & Respiratory Emergencies</p> <ul style="list-style-type: none"> • Cardiac Arrest and CPR Guidelines • Acute Coronary Syndromes (MI, Angina) • Hypertensive Crisis and Arrhythmias • Pulmonary Embolism and Deep Vein Thrombosis • Stroke and Transient Ischemic Attacks (TIA) • Congestive Heart Failure (CHF) Exacerbation • Respiratory Distress and Acute Respiratory Failure • Asthma and Chronic Obstructive Pulmonary Disease (COPD) Exacerbation • Pneumothorax and Pleural Effusion • Anaphylaxis and Severe Allergic Reactions 	11 hours
III.	<p>Neurological & Trauma Emergencies</p> <ul style="list-style-type: none"> • Seizures and Status Epilepticus • Traumatic Brain Injury (TBI) and Spinal Cord Injuries • Heat Stroke and Hypothermia • Drowning and Near-Drowning Emergencies • Fractures, Dislocations, and Soft Tissue Injuries • Burns: Classification and Emergency Management • Poisoning and Drug Overdose • Pain Management in Trauma Patients 	11 hours
IV.	<p>Endocrine, Toxicological & Special Emergencies</p> <ul style="list-style-type: none"> • Diabetic Emergencies (DKA, Hypoglycemia, HHS) • Adrenal Crisis and Thyroid Emergencies • Renal Emergencies (Acute Kidney Injury, Electrolyte Imbalances) • Obstetric Emergencies (Eclampsia, Postpartum Hemorrhage) • Psychiatric Emergencies (Suicidal Attempts, Psychosis) • Infectious Disease Emergencies (Sepsis, Meningitis) • Toxicological Emergencies (Organophosphate Poisoning, Alcohol Poisoning) • Disaster and Mass Casualty Management 	11 hours

Subject Name: Post Anesthesia Care (Theory)

Course Code: OTT242M504

Course Type: Major

Course Level: 300

L-T-P-C – 4-0-0-4

Scheme of Evaluation: (T)

Objective: The objective of **Post-Anaesthesia Care** is to ensure safe recovery by managing pain, monitoring complications, promoting wound healing, and supporting early mobilization. It also focuses on patient education, nutritional management, and effective communication for comprehensive post-surgical care.

On successful completion of the course the students will be able to:		
CO	Course Outcome	Blooms Taxonomy Level
CO1	Recall the fundamental principles of post-operative care, including pain management, wound care, and monitoring for complications.	BT 1
CO2	Explain the importance of early mobilization, fluid and nutritional management, and infection control in post-surgical recovery.	BT 2
CO3	Demonstrate proper techniques for wound dressing, patient positioning, pain assessment, and post-operative monitoring.	BT 3
CO4	Analyze patient recovery progress, identify potential complications, and make informed decisions for appropriate post-operative interventions.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	<i>Setting up of PACU:</i> <ul style="list-style-type: none">• Definition of PACU• Set up• Staff/patient ratio• Monitoring in PACU• Criteria for Shifting patient out of PACU• Aldrete score / Modified Aldrete score• Discharge criteria	11 hours
II.	<i>Post-Operative Monitoring and Complications</i> <ul style="list-style-type: none">• Vital signs monitoring and early detection of complications• Pain management: pharmacological and non-pharmacological approaches• Post-operative complications:<ul style="list-style-type: none">• Respiratory (atelectasis, pneumonia)• Cardiovascular (DVT, shock)• Gastrointestinal (paralytic ileus, nausea, vomiting)	11 hours

	<ul style="list-style-type: none"> Wound healing issues (infection, dehiscence, evisceration) Fluid and electrolyte balance management 	
III.	<p><i>Wound Care and Rehabilitation</i></p> <ul style="list-style-type: none"> Types of surgical wounds and classification Wound dressing techniques and drainage systems (e.g., JP drain, chest tube) Early mobilization and physiotherapy for post-surgical recovery Nutrition and diet in post-operative care Psychological support and patient education 	11 hours
IV.	<p><i>Post operative pain relief</i></p> <ul style="list-style-type: none"> Management of postoperative pain- narcotics, NSAID (IM/IV), local anaesthetics through catheters, transdermal patches <p>Causes of mortality in PACU</p> <ul style="list-style-type: none"> Mortality -myocardial infarction, arrhythmias, hypoxia, electrolyte imbalance, respiratory depression. Massive haemorrhage, embolism. Components of Emergency tray / Trolley in PACU <p><input type="checkbox"/> Discharge planning and home-based post-operative care</p> <p><input type="checkbox"/> Legal and ethical considerations in post-operative care</p>	11 hours

44 hours		16 hours (Hospital visits, Demonstration, Case study)

Text Book:

1. Nancy Caroline's Emergency Care in the Streets, AAOS.
2. Morgan & Mikhail's Anesthesiology Cases.

Reference books:

1. The Anesthesia Technician and Technologist's Manual by Syed Arslan.
2. Manual of Anesthesia for Undergraduates by Satish G. Deshpande

Subject Name: Internship VI
Course Code: OTT242M624
Course Level: 300

Objective: The objective of the course is to educate the students and prepare them for future real-life situations and to enhance the delivery of health care in the Operation Theatre setting.

1. Students will observe the basic operations of the operation theatre while interacting with the multidisciplinary team members involved in providing optimal care to the patients. The student will be introduced to terminologies, equipment, and techniques used for preparation and management of the OT.
2. Students will gain additional skills in clinical preparation, interaction with patients and professional personnel. Students apply knowledge from previous clinical learning experience under the supervision of a senior technical officer
3. Students will improve their skills in clinical procedures. Progressive interaction with patients and professional personnel are monitored as students practice in a supervised setting. Additional areas include problem solving, identifying machine components and basic side effect management. Students will demonstrate competence in beginning, intermediate, and advanced procedures.
4. The course provides students the opportunity to continue to develop confidence and increased skill in simulation and treatment delivery. Students will demonstrate competence in beginning, intermediate, and advanced procedures in both areas. Students will participate in advanced and specialized treatment procedures.

Seventh Semester

Subject Name: General Surgery Techniques and Procedures (Practical)

Course Code: OTT242M711

Course Type: Major

Course Level: 400

L-T-P-C – 0-0-10-5

Scheme of Evaluation: (P)

Objective: The objective of **General Surgery Techniques and Procedures** is to equip students with fundamental surgical skills, aseptic techniques, minor and emergency procedures, and an introduction to laparoscopic and advanced surgical practices.

On successful completion of the course the students will be able to:

CO	Course Outcome	Blooms Taxonomy Level
CO1	Recall fundamental surgical principles, aseptic techniques, and the use of surgical instruments.	BT 1
CO2	Explain the steps involved in minor surgical procedures, wound management, and infection control practices.	BT 2
CO3	Demonstrate proper suturing techniques, local anesthesia administration, and basic emergency surgical interventions.	BT 3
CO4	Examine surgical cases, identify complications, and propose appropriate surgical techniques and management strategies.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	<ul style="list-style-type: none"> • Fundamentals of General Surgery • Layout and equipment in the operating room (OR) • Aseptic Techniques & Infection Control • Handling and maintenance of surgical instruments • Suturing & Knot-Tying Techniques 	12 hours
II.	<ul style="list-style-type: none"> • Minor Surgical Procedures & Wound Management • Local Anesthesia Techniques • Dressing types and techniques • Biopsy Techniques • Skills in minor surgical interventions and postoperative care. 	12 hours

III.	<ul style="list-style-type: none"> • Major Surgical Techniques & Emergency Procedures • advanced surgical interventions and critical care management. • Surgical Incisions & Hemostasis • Laparotomy & Abdominal Procedures • Emergency Surgery Procedures 	12 hours
IV.	<ul style="list-style-type: none"> • Laparoscopic Surgery & Advanced Techniques • Basic Laparoscopic Procedures • Robotic-Assisted Surgery • Use of electrocautery, harmonic scalpel, and LigaSure • Management of Surgical Complications 	12 hours

Course Type: Major
Course Level: 400
L-T-P-C – 0-0-8-4

Scheme of Evaluation: (P)

Objective: To equip students with in-depth knowledge and hands-on skills in diagnosing and managing complex gastrointestinal disorders, mastering advanced laparoscopic techniques, and understanding minimally invasive surgical interventions for improved patient outcomes.

On successful completion of the course the students will be able to:

CO	Course Outcome	Blooms Taxonomy Level
CO1	Recall the anatomy, physiology, and common pathologies of the gastrointestinal (GI) system along with principles of laparoscopic surgery.	BT 1
CO2	Explain the indications, contraindications, and procedural steps of advanced GI surgeries and minimally invasive techniques.	BT 2
CO3	Demonstrate proficiency in handling laparoscopic instruments, trocar placement, pneumoperitoneum creation, and assisting in GI surgical procedures.	BT 3
CO4	Evaluate complex GI surgical cases, identify complications, and assess the advantages of laparoscopic versus open surgical approaches.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	<ul style="list-style-type: none"> • Principles of laparoscopic surgery • Laparoscopic Instruments & OT Setup • Basic Laparoscopic Skills & Camera Handling • Diagnostic Laparoscopy & Port Placement Techniques • Identification and handling of laparoscopic instruments 	12 hours
II.	<ul style="list-style-type: none"> • Laparoscopic Cholecystectomy • Laparoscopic Appendectomy • Laparoscopic Hernia Repair (TEP & TAPP Approaches) • Upper GI Endoscopy & Laparoscopic Fundoplication • Laparoscopic Tubal Ligation 	12 hours

III.	<ul style="list-style-type: none"> • Laparoscopic Management of Perforation Peritonitis • Laparoscopic Bowel Resection & Anastomosis • Laparoscopic Splenectomy & Adrenalectomy • Emergency GI Bleeding Management (Endoscopic & Laparoscopic Approaches) 	12 hours
IV.	<ul style="list-style-type: none"> • Postoperative Monitoring & Pain Management • Complications in Laparoscopic Surgery & Their Management • Enteral vs. parenteral nutrition in post-GI surgery patients • Nutritional Support & Stoma Care 	12 hours
TOTAL		48 hours

Text Book:

1. *Recent Advances in Gastrointestinal and Hepatopancreatobiliary Surgery*, Haribhakti Sanjiv, Jaypee Brothers Medical Publishers
2. *IAGES Manual of Minimal Access Surgery*, Multiple, under Indian Association of Gastrointestinal Endo Surgeons (IAGES), Jaypee Brothers Medical Publishers

Reference books:

1. *Mastery of Endoscopic and Laparoscopic Surgery*, Lee L. Swanstrom, Nathaniel J. Soper, Wolters Kluwer (Lippincott Williams & Wilkins)
2. *Schwartz's Principles of Surgery* (especially GI and MIS chapters), F. Charles Brunicaardi et al., McGraw Hill Education

Subject Name: Applied Trauma and Emergency Surgery (Practical)
Course Code: OTT242M714
Course Type: Major
Course Level: 400
L-T-P-C – 0-0-8-4

Scheme of Evaluation: (P)

Objective: To equip students with essential knowledge and practical skills in the rapid assessment, stabilization, and surgical management of trauma and emergency surgical conditions, ensuring prompt and effective patient care in critical situations.

On successful completion of the course the students will be able to:

CO	Course Outcome	Blooms Taxonomy Level
CO1	Recall the fundamental principles of trauma assessment, resuscitation protocols, and emergency surgical procedures.	BT 1
CO2	Explain the pathophysiology of traumatic injuries, principles of hemorrhage control, and emergency surgical interventions.	BT 2
CO3	Demonstrate proficiency in performing primary and secondary trauma assessments, airway management, and emergency surgical procedures such as chest tube insertion and damage control surgery.	BT 3
CO4	Evaluate trauma cases, identify life-threatening conditions, and determine appropriate surgical and non-surgical management strategies.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	<ul style="list-style-type: none"> • Introduction to Trauma Surgery & Triage System • Primary & Secondary Trauma Assessment (ATLS Guidelines) • Airway Management & Resuscitation Techniques • Hemorrhage Control & Vascular Access • Fluid resuscitation and blood transfusion protocols 	12 hours
II.	<ul style="list-style-type: none"> • Chest Trauma & Thoracic Surgical Interventions • Abdominal Trauma & Emergency Laparotomy • Pelvic Fractures & Limb Trauma Management • Head and Spine Trauma • Cervical spine stabilization techniques 	12 hours
III.	<ul style="list-style-type: none"> • Principles of Damage Control Surgery (DCS) • Management of Septic Shock & Multi-Organ Dysfunction Syndrome (MODS) • Burns & Thermal Injury Management • Emergency Vascular Surgery • Amputation procedures in severe trauma cases 	12 hours

IV.	<ul style="list-style-type: none"> • ICU care for post-surgical trauma patients • Complications of Trauma Surgery & Their Management • Rehabilitation & Physiotherapy for Trauma Patients • Simulation-based hands-on training for emergency surgical procedures 	12 hours
TOTAL		48 hours

Text Book:

1. Nancy Caroline's Emergency Care in the Streets, AAOS.
2. Morgan & Mikhail's Anesthesiology Cases.

Reference books:

1. SRB manual of surgery by Sriram Bhat M, JAYPEE Brothers
2. Manipal Manual of Surgery by K. Rajgopal Shenoy, CBS Publishers & Distributors

Subject Name: Disaster Management and Ambulance Operations (Theory)

Course Code: OTT242N715

Course Type: Major

Course Level: 400

L-T-P-C – 0-0-8-4

Scheme of Evaluation: (P)

Objective: The objective of this course is to prepare the students to identify, minimize the hazard and patient care management during a disaster.

On successful completion of the course the students will be able to:		
CO	Course Outcome	Blooms Taxonomy Level
CO1	List the different natural and manmade disaster and its management.	BT 1
CO2	Outline the paramedic response to disasters.	BT 2
CO3	Build and initiate management plan for disaster affected patients.	BT 3
CO4	Examine and foresee any scene and initiate proper entry and exit plan.	BT 4

Detailed Syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	Ambulance operations, Medical incident command <ul style="list-style-type: none">• Understanding your ambulance• Ambulance staffing and development• Emergency vehicle operation• Air medical transport• The incident command• Standard operating procedures• Medical incident command• Triage	12 hours
II.	Terrorism and weapons of mass destruction, Rescue awareness and operations <ul style="list-style-type: none">• Terrorism• Weapons of mass destruction• Paramedic Response to terrorism• Chemical agents• Biological agents• Radiological/nuclear devices• Guide lines for operations• Steps of special rescue• General rescue scene procedure• Assisting rescue crews• Patient care	12 hours

III.	<p>Hazardous material incidents</p> <ul style="list-style-type: none"> • Identification of hazardous materials • Hazardous scene management • Contamination and toxicology • Decontamination and treatment 	12 hours
IV.	<p>Crime scene awareness</p> <ul style="list-style-type: none"> • Awareness • Highway incidents • Residential incidents • Violence on the streets • Hostage situations • Contact and cover • Self defence • Preserving crime scene evidence <p>Disaster management</p> <ul style="list-style-type: none"> • Understanding natural and manmade disasters • Understanding effects of disasters • Prevention, preparation, response • Medical response to disasters • Mock drills 	12 hours
TOTAL		48 hours

Text Book:

1. Nancy Caroline's Emergency Care in the Streets, AAOS.
2. An introduction to Disaster Management: Natural Disasters and Man Made Hazards by S. Vaidhyathan.

Reference Book:

1. Emergency Medicine, trauma and Disaster Management: Prehospital to hospital care and beyond by Emmanouil Pikoulis and Jay Doucet.

8th Semester

Subject Name: Surgical Critical Care and Post Operative Management(Practical) Course Code: OTT242M811 Course Type: Major Course Level: 400 L-T-P-C – 0-0-16-8	Scheme of Evaluation: (P)
--	----------------------------------

Objective: To equip students with essential knowledge and practical skills in the critical care management of surgical patients, focusing on perioperative monitoring, complication prevention, pain management, and evidence-based postoperative care to optimize patient recovery and outcomes.

On successful completion of the course the students will be able to:		
CO	Course Outcome	Blooms Taxonomy Level
CO1	Recall the fundamental principles of surgical critical care, perioperative monitoring, and postoperative management protocols.	BT 1
CO2	Explain the pathophysiology of postoperative complications, fluid and electrolyte balance, and pain management strategies.	BT 2
CO3	Demonstrate proficiency in ICU monitoring, ventilator management, wound care, and early mobilization techniques for postoperative patients.	BT 3
CO4	Evaluate postoperative cases, identify complications, and formulate appropriate management plans to improve surgical patient outcomes.	BT 4

Detailed syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	<ul style="list-style-type: none"> • Preoperative Risk Assessment & Optimization • Hemodynamic Monitoring in Surgical Patients • Surgical Stress Response & Its Management • Pain Management in the Perioperative Period (Multimodal analgesia, PCA pumps, epidural analgesia) • Ethical & Legal Considerations in Surgical Critical Care 	10 hours
II.	<ul style="list-style-type: none"> • Ventilator Management & Weaning Protocols • Acid-Base & Blood Gas Interpretation • Wound Care & Postoperative Infection Management • Sepsis & Septic Shock Management in Surgical Patients • Management of Postoperative Delirium & ICU Psychosis 	13 hours

III.	<ul style="list-style-type: none"> • Early vs. Late Postoperative Complications • Surgical Site Infections (SSI) & Its Prevention • Postoperative Bleeding & Hematoma Formation (Causes, resuscitation, surgical intervention) • Deep Vein Thrombosis (DVT) & Pulmonary Embolism (PE) (Risk factors, prevention, treatment) • Cardiac Complications in Surgical Patients 	13 hours
IV.	<ul style="list-style-type: none"> • Postoperative Nutritional Support & Long-Term Dietary Plans • Management of Stomas & Surgical Drains • Psychosocial Support & Mental Health in Postoperative Patients • Long-Term Pain Management & Opioid Stewardship • Rehabilitation in Major Surgeries (Orthopedic, Neurological, GI) 	12 hours
TOTAL		48 hours

Text Books:

1. *Textbook of Surgical Critical Care*, Sandeep Guleria, Jaypee Brothers Medical Publishers
2. *Postoperative Care Manual*, Shirish Yande, Jaypee Brothers Medical Publishers

Reference Book:

1. Emergency Medicine, trauma and Disaster Management: Prehospital to hospital care and beyond by Emmanouil Pikoulis and Jay Doucet.
2. *Cameron's Current Surgical Therapy*, John L. Cameron, Andrew M. Cameron, Elsevier

Subject Name: Medicine Relevant To Operation Theatre (Theory)

Course Code: OTT242N812

Course Type: Major

Course Level: 300

L-T-P-C 0-0-14-7

Scheme of Evaluation: (P)

Objective: To provide students with theoretical and practical knowledge about the life saving procedures in case of an airway and respiratory emergency that can they can analyze and apply in the OT.

On successful completion of the course the students will be able to:		
CO	Course Outcome	Blooms Taxonomy Level
CO1	Remember the various medical conditions encounter in the OT.	BT 1
CO2	Understand basic management of various medical conditions in the OT.	BT 2
CO3	Apply knowledge of pathophysiology of different medical conditions relevant to OT patients.	BT 3
CO4	Analyzethe conditions and plan the management of the patient accordingly.	BT 4

Detailed syllabus

Modules	Topics (if applicable) & Course Contents	Periods
I.	Diabetes Mellitus (DM) <ul style="list-style-type: none">• Signs and symptoms Diabetes Mellitus• Diabetic complications,• Drugs used in diabetes mellitus• Anaesthetic implications of DM• Causes of DM- Type- 1, Type -2 - Gestational diabetes• Prevention• Management -Lifestyle, Medications Anaemia <ul style="list-style-type: none">• Signs and symptoms• Anaesthetic implications• Causes• Diagnosis• Treatments• Epidemiology	10 hours
II.	Hypertension <ul style="list-style-type: none">• Signs and symptoms• Management• Causes• Pathophysiology• Diagnosis –Prevention	13 hours

	<p>Chronic renal failure</p> <ul style="list-style-type: none"> • Signs and symptoms • Causes • Diagnosis • Treatment • Adjustment of drugs and doses 	
III.	<p>Pregnancy shock</p> <ul style="list-style-type: none"> • Managements of various types of shocks during pregnancy • Types and Causes of pregnancy shocks • Clinical Picture of various Shocks <p>Chronic liver disease/failure</p> <ul style="list-style-type: none"> • Causes of chronic liver disease • Physical signs, Recognition, Treatment • Risk factors for various liver diseases • Adjustment of drugs and doses 	13 hours
IV.	<p>Obesity</p> <ul style="list-style-type: none"> • Diseases associated with obesity • Anaesthetic problems in obese patients • Ideal body weight, adjusted body weight in obese of obesity • Effects on health • Causes • Management <p>Epilepsy</p> <ul style="list-style-type: none"> • Signs and symptoms • Management • Causes • Pathophysiology • Diagnosis • Prevention 	12 hours
TOTAL		48 hours

Text Books:

1. *Clinical Medicine for Students in Operation Theatre Technology*, Dr. Jaya K. Tyagi, CBS Publishers & Distributors
2. *Essentials of Medicine for Allied Health Sciences*, Dr. M.S. Bhatia, CBS Publishers & Distributors

Reference books:

1. *Oxford Handbook of Clinical Medicine*, Ian B. Wilkinson, Tim Raine, et al., Oxford University Press

Subject Name: Major Project/ Dissertation
Course Code: OTT242M822
Course Level: 400

Objective: The objective of the Major Research/Project in Operation Theatre Technology is to develop students' research skills, critical thinking, and technical expertise in perioperative care, fostering evidence-based practices, innovation, and ethical professionalism to improve surgical outcomes and patient safety.

Students will observe the basic operations of the operation theatre while interacting with the multidisciplinary team members involved in providing optimal care to the patients. Students must choose a topic related to Operation Theatre Technology, Surgical Techniques, Sterilization & Infection Control, Anesthesia Technology, **or** Perioperative Care.

At the end of Research Project Students will be able:

- 1) To develop research skills specific to perioperative care and operation theatre technology.
- 2) To enhance students' ability to analyze, interpret, and apply evidence-based practices.
- 3) To promote critical thinking and problem-solving in surgical technology.
- 4) To encourage innovation and improvement in surgical procedures and patient safety.
- 5) To prepare students for real-world challenges in OT management and infection control.

Suggested Research Areas:

1. Surgical Safety & Patient Care
2. Infection Control & Sterilization
3. Anesthesia & Airway Management
4. Minimally Invasive Surgery & Technology
5. Postoperative Recovery & Pain Management
6. Advancements in Anesthesia Techniques & Their Outcomes
7. OT Management & Human Factors
