## Course Structure and Syllabus of the Framework

### Course Structure of B. Tech (AI)

1 <sup>st</sup> Semester							
S. No.	Subject Code	Names of subjects	L	T	P	C	TCP
<b>Basic Science Course (BSC)</b>							
1	PHY022C101	Physics	3	0	2	4	5
2	MAT022C102	Mathematics – I	3	1	0	4	4
<b>Engineering Science Course (ESC)</b>							
3	CSE022C103	Basic Electrical Engineering	3	0	2	4	5
4	CEE022C104	Engineering Graphics & Design	2	0	4	4	6
<b>Humanities/Social Science including Management Course (HSMC)</b>							
5	BHS022A101	Universal Human Values: Understanding Harmony and Ethical Human Conduct	2	0	0	2	2
<b>Mandatory Courses (MC)/ Skill Enhancement Courses</b>							
6	COD022S116	Design Thinking	0	0	2	1	2
7	CSE022S117	Ideation Lab	0	0	2	1	2
		<b>TOTAL</b>	<b>13</b>	<b>1</b>	<b>12</b>	<b>20</b>	<b>26</b>
8		<b>Honors/Minor (Optional) [To be obtained through MOOCS/ SWAYAM]</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>0</b>
2 <sup>nd</sup> Semester							
S. No.	Subject Code	Names of subjects	L	T	P	C	TCP
<b>Basic Science Course (BSC)</b>							
1	CHY022C201	Chemistry	3	0	2	4	5
2	MAT022C202	Mathematics – II	3	1	0	4	4
3	CSE022C203	Biology for Engineers	3	0	0	3	3
<b>Engineering Science Course (ESC)</b>							
4	CSE022C204	Programming for Problem Solving	3	0	2	4	5
5	MEE022C215	Manufacturing Practices Workshop	0	0	4	2	4
<b>Humanities/Social Science including Management Course (HSMC)</b>							
6	CEN022A201	English for Technical Writing	2	0	0	2	2
<b>Mandatory Courses (MC)/ Skill Enhancement Courses</b>							
7	CSE022S217	Sports and Yoga	0	0	2	1	2
		<b>TOTAL</b>	<b>14</b>	<b>1</b>	<b>10</b>	<b>20</b>	<b>25</b>

Artificial Intelligence	PEC 1: Advanced Deep Learning (ARI022D601)
	PEC 2: Natural Language Processing (ARI022D601)
	PEC 3: Computer Vision (ARI022D701)
	PEC 4: Reinforcement Learning (ARI022D702)
	PEC 5: AI for Robotics (ARI022D801)

<b>List of Open Electives to be offered by Department of CSE</b>	
<b>Open Elective-I</b>	Programming with Python (ARI022G306)
<b>Open Elective-II</b>	Fundamentals of Web Design (ARI022G406)
<b>Open Elective-III</b>	Introduction to AI (ARI022G506)
<b>Open Elective-IV</b>	Fundamentals of IOT (ARI022G606)

## Detailed Syllabus of 1<sup>st</sup> Semester

<b>Paper I/Subject Name: Physics</b>	<b>Subject Code: PHY022C101</b>
<b>L-T-P-C - 3-0-2-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

### Objective:

The objectives of the course are to make the students enhance the fundamental knowledge in Physics and its applications relevant to various streams of Engineering and Technology

**Prerequisites:** Concepts of Physics of +2 level

### Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define the basic terminologies of physics	BT 1
CO 2	Understand the basic concepts of Physics	BT 2
CO 3	Solve problems in wave mechanics.	BT 3
CO 4	Analyze knowledge in calculating red and blue shift and also in acoustics.	BT 4

### Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I.	<b>Electromagnetic Theory</b>	Electrostatics in vacuum, Electrostatics in a linear dielectric medium, Magneto statics, Magneto statics in a linear magnetic medium, Faraday's law, Displacement current, Magnetic field due to time-dependent electric field and Maxwell's equations, Electromagnetic waves	13
II.	<b>Introduction to Mechanics</b>	Transformation of scalars and vectors under Rotation transformation; Potential energy function; Non-inertial frames of reference; Harmonic oscillator; Definition and motion of a rigid body in the plane; Rotation in the plane; Kinematics in a coordinate system rotating and translating in the plane; Angular momentum, Introduction to three-dimensional rigid body motion	25
III.	<b>Quantum Mechanics for Engineers</b>	Wave nature of particles and the Schrodinger equation, Mathematical Preliminaries for quantum mechanics, Applying the Schrodinger equation, molecular bonding, Solids	10
IV	<b>Oscillations, Waves and Optics</b>	Simple harmonic motion, damped and forced simple harmonic oscillator, Non-dispersive transverse and longitudinal waves in one dimension and introduction to dispersion, The propagation of light and geometric optics, Wave optics, Lasers	18
<b>TOTAL</b>			<b>66</b>

## Physics Lab Syllabus

### Detailed Syllabus:

Experiment	Experiment Title	Lab Hours
I	Determination of Moment of Inertia of a given solid about its own axis by using M.I. Table	2
II	Determination of Young's Modulus using Searle's Apparatus	2
III	Determination of Rigidity of Modulus of the material of the given rod by Stastical method	2
IV	Determination of Powers of Given lenses using an Optical Bench i. Concave Lens, ii Convex Lens	2
V	Determination of Resistance of a Galvanometer using Post Office Box.	2
VI	To determine the mechanical equivalent of heat by Joule's calorimeter	2
VII	Determination of ratio of E.M.F of two cells using Potentiometer.	2
VIII	To determination of the focal length of a convex mirror with the help of an auxiliary lens.	2
IX	Determination of Horizontal Components of Earth's Magnetic field using Magnetometer	2
X	Determination of coefficient of Viscosity of water by Capillary Flow Method	2

Credit Distribution

2. [https://mrcet.com/downloads/digital\\_notes/HS/R20/Engineering%20Physics.pdf](https://mrcet.com/downloads/digital_notes/HS/R20/Engineering%20Physics.pdf)
3. NPTEL Course on Introduction To Electromagnetic Theory by Prof. Manoj Harbola, IIT Kanpur

<b>Paper II/Subject Name: Mathematics-I</b>	<b>Subject Code: MAT022C102</b>
<b>L-T-P-C – 3-0-2-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

### Objective:

The objectives of the course are to enable students to achieve conceptual understanding and to retain the best traditions of traditional calculus

**Prerequisites:** Concepts of Mathematics of +2 level

### Course Outcomes

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Define</b> basic terminologies of calculus	<b>BT 1</b>
<b>CO 2</b>	<b>Understand</b> the applications of differential and integral calculus in different fields of Engineering.	<b>BT 2</b>
<b>CO 3</b>	<b>Apply</b> the single and multivariable differential and Integral calculus in engineering problems.	<b>BT 3</b>
<b>CO 4</b>	<b>Analyze</b> and <b>assess</b> the patterns in series	<b>BT 4 &amp; 5</b>

### Detailed Syllabus:

<b>Modules</b>	<b>Topics</b>	<b>Course Contents</b>	<b>Hours</b>
<b>I.</b>	<b>Basic &amp; Single Variable Calculus</b>	Curvature, evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions. Rolle's Theorem, Mean value theorems and applications; Extreme values of functions; Linear approximation; Indeterminate forms and L' Hospital's rule.	<b>15</b>
<b>II.</b>	<b>Multi Variable Calculus I</b>	Limit, continuity and partial derivatives, directional derivatives, gradient, total derivative; Tangent plane and normal line; Maxima, minima and saddle points; Method of Lagrange multipliers.	<b>15</b>
<b>III.</b>	<b>Multi Variable Calculus II</b>	Multiple Integration: Double integrals (Cartesian), change of order of integration in double integrals, Change of variables (Cartesian to polar), Applications: areas and volumes, Center of mass and Gravity (constant and variable densities); Triple integrals (Cartesian), orthogonal curvilinear coordinates, Simple applications involving	<b>15</b>

		cubes, sphere and rectangular parallelepipeds; Scalar line integrals, vector line integrals, scalar surface integrals, vector surface integrals, Gradient, curl and divergence, Theorems of Green, Gauss and Stokes.	
<b>IV</b>	<b>Sequence and Series</b>	Limits of sequence of numbers, Calculation of limits, Infinite series; Tests for convergence; Power series, Taylor and Maclaurin series; Taylor theorem, convergence of Taylor series, error estimates.	<b>15</b>
<b>TOTAL</b>			<b>60</b>

<b>Credit Distribution</b>		
<b>Lecture/ Tutorial</b>	<b>Practicum</b>	<b>Experiential Learning</b>
4*15 NCH = 60 NCH	1*30 NCH = 30 NCH	30 NCH (Problem Solving, Internship, Seminar, Case Study, Discussion)

**Text Books:**

1. *A text book of Engineering Mathematics*, Bali N. P. and Narayan Iyenger N., 9<sup>th</sup> Edition, 2016, Laxmi Publication.
2. *Mathematical Methods for Physics and Engineering: A Comprehensive Guide*, K. F. Riley, M. P. Hobson, 3<sup>rd</sup> Edition, 2006, Cambridge University Press

**Reference Books:**

1. Grewal B. S., *Higher Engineering Mathematics*, 43<sup>rd</sup> Edition, 2014, Khanna Publishers.
2. Das B. C. & Mukherjee B. N., *Differential Calculus*, 55<sup>th</sup> Edition, U. N. Dhur & Sons Pvt. Ltd.
3. Das B. C. & Mukherjee B. N., *Integral Calculus*, 57<sup>th</sup> Edition, U. N. Dhur & Sons Pvt. Ltd

**Additional Readings:**

1. [https://mrcet.com/downloads/digital\\_notes/HS/Mathematics-I](https://mrcet.com/downloads/digital_notes/HS/Mathematics-I).
2. <https://www.vidyalankar.org/gate/assets/docs/notes/maths.pdf>

<b>Paper III/Subject Basic Electrical Engineering</b>	<b>Subject Code: CSE022C103</b>
<b>L-T-P-C – 3-0-2-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

**Objective:**

The objectives of the course are to make students understand the basic electrical terminologies and familiarize them with the basic concepts of D.C., single-phase and three-phase A.C. networks.

**Prerequisites:** Basic concepts of D.C. networks of Class XII, Electromagnetic Induction and A.C. Fundamentals etc.

## Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Recall the basic concepts of electrical engineering	BT 1
CO 2	Understand the concept behind basic electric and magnetic circuits.	BT 2
CO 3	Apply the working principles of electrical machines in real-life.	BT 3
CO 4	Analyze DC & AC circuits using different laws and theorems.	BT 4

## Detailed Syllabus:

Modules	Topic	Course Content	Hours
I.	DC Circuits	Electrical Circuit Elements - The resistance element, the inductance element, the capacitance element. Voltage & Current source, practical & ideal voltage and current sources, source transformation. Kirchhoff's Laws, Analysis of simple circuits with DC excitation - series circuit, parallel circuit, voltage and current divider rule, star -delta conversion, Maxwells mesh current method, nodal voltage analysis , Network Theorems - Thevenin's Theorem, Nortons Theorem, Superposition theorem	12
II.	AC Circuits	AC fundamentals - generation of alternating voltage, representation of sinusoidal waveform, concept of frequency, cycle, time period, instantaneous value, average value, peak value, RMS value, phasor representation. Single phase AC Circuits - analysis of single-phase AC circuits consisting of R-L-C parameters, apparent power, real power, reactive power, power factor and its significance. Analysis of R-C series circuit, R-L-C series circuit, analysis of AC parallel	20
III.	Electrical Machines:	Principle of operation and construction of single-phase transformers. EMF equation, losses, efficiency and voltage regulation. DC Machines - Constructional details of a DC Machine; EMF Equation of a DC machine, Types of DC Machines, Applications of DC Generators, operation of a DC machine as a motor, Torque equation, importance of back emf, speed equation, speed regulation, starting a DC motor, types of DC Motor, applications of DC motors	20

Modules	Topic	Course Content	Hours
IV.	<b>Electrical Installations:</b>	Electrical Power Supply System. Three phase four wire distribution system. Protection of electrical installations against overload, short circuit and earth fault. Protective devices for overload, short circuit, earth fault and electric shock – SFU, MCB, ELCB. Earthing – difference between neutral wire & earth wire, methods of earthing of domestic fittings and appliances. Types of wires, cables and wiring used in electrical installations.	14
<b>TOTAL</b>			<b>66</b>

### Basic Electrical Engineering Lab Syllabus

**Total Lab Hours for the semester = 30 (2 hours per week)**

**Minimum 10 Laboratory experiments based on the following-**

Lab	Experiments	Hours
I	To verify Thevenin's Theorem for DC network	2
II	To verify Maximum Power Transfer Theorem for DC network	2
III	Study of R-L-C Series circuit and determine R,L,C, $\cos \Phi$ , P and Q and draw the phasor diagram	2
IV	Study of R-L-C Parallel circuit and determine R,L,C, $\cos \Phi$ , P and Q and draw the phasor diagram	2
V	Calibration of a milli-ammeter as a voltmeter.	2
VI	To determine the ohmic and effective resistance (armature winding)	2
VII	To study the characteristics of a filament lamp	2
VIII	To measure the power in a single-phase load using one wattmeter	2
IX	To measure the insulation resistance using Megger	2
X	Demonstration of house wiring	2
<b>TOTAL</b>		<b>20</b>

### Credit Distribution

Lecture/ Tutorial	Practicum	Experiential Learning
3 * 22 NCH = 66 NCH	2 * 15 NCH = 30 NCH	8 * 3 NCH = 24 NCH (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)

**Text Books:**

1. *A Text Book of Electrical Technology*, Thereja, B.L., 1<sup>st</sup> Edition revised, 2008, S Chand & Company Ltd. Ram Nagar; New Delhi.
2. *Basic Electrical Engineering*, D. P. Kothari, I. J.Nagrath, 3rd Edition, 2009, Tata McGraw-Hill

**Reference Books:**

1. D. C. Kulshreshtha, *Basic Electrical Engineering*, 1<sup>st</sup> Edition, 2009, McGraw-Hill

3. NPTEL Course on Basic Electrical Circuits by Prof. Nagendra Krishnapura, IITM
4. NPTEL Course on Fundamentals of Electrical Engineering by Prof. Debapriya Das, IIT, Kharagpur

<b>Paper IV/Subject Name: Engineering Graphics &amp; Design</b>	<b>Subject Code: CEE022C104</b>
<b>L-T-P-C – 3-0-2-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

**Objective:**

The objectives of the course are to make students understand the process of drawing projections and sections and basic engineering drawing formats and to convert sketches to engineered drawings.

**Prerequisites:** None

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Relate</b> with the concepts of drawings and projections	<b>BT 1</b>
<b>CO 2</b>	<b>Understand</b> the dimension and figures using the drawing instruments and acquire visualization skills, projection of points, etc.	<b>BT 2</b>
<b>CO 3</b>	<b>Utilize</b> engineering curves in tracing the paths of simple machine components.	<b>BT 3</b>
<b>CO 4</b>	<b>Analyze</b> and assess sketches to convert them to engineered drawings.	<b>BT 4</b>

**Detailed Syllabus:**

<b>Modules</b>	<b>Topics</b>	<b>Course Contents</b>	<b>Hours</b>
<b>I.</b>	<b>Introduction and Projections</b>	Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Conic sections including the Rectangular Hyperbola (General method only); Cycloid, Epicycloid, Hypocycloid and Involute; Scales – Plain, Diagonal and Vernier Scales; Principles of Orthographic Projections- Conventions - Projections of Points and lines inclined to both planes; Projections of planes inclined Planes - Auxiliary Planes;	<b>11</b>

		Covering those inclined to both the Planes- Auxiliary Views; Draw simple annotation, dimensioning and scale. Floor plans that include: windows, doors, and fixtures such as WC, bath, sink, shower, etc	
II.	<b>Angular Solids and Isometric Projections</b>	Prism, Cylinder, Pyramid, Cone – Auxiliary Views; Development of surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone; Draw the sectional orthographic views of geometrical solids, objects from industry and dwellings (foundation to slab only). Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions;	<b>11</b>
III.	<b>Overview of Computer Graphics</b>	Listing the computer technologies that impact on graphical communication, Demonstrating knowledge of the theory of CAD software [such as: The Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom as used in CAD, Select and erase objects.; Isometric Views of lines, Planes, Simple and compound Solids]. Consisting of set up of the drawing page and the printer, including scale settings, setting up of Modules and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerancing; Orthographic constraints, Snap to objects manually and automatically; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles;	<b>11</b>
IV	<b>Customisation and CAD drawing</b>	Covering applying dimensions to objects, applying annotations to drawings; Setting up and use of Layers, layers to create drawings, Create, edit and use customized layers; Changing line lengths through modifying existing lines (extend/lengthen); Printing documents to paper using the print command; orthographic projection techniques; Drawing sectional views of composite right regular geometric solids and project the true shape of the sectioned surface; Drawing annotation, Computeraided design (CAD) software modeling of parts and assemblies. Parametric and non-parametric solid, surface, and wireframe models. Part editing and two-dimensional documentation of models. Planar projection theory, including sketching of perspective, isometric, multiview, auxiliary, and section views. Spatial visualization exercises. Dimensioning guidelines, tolerancing techniques; dimensioning and scale multi views of dwelling;	<b>11</b>
<b>TOTAL</b>			<b>44</b>

<b>Credit Distribution</b>		
<b>Lecture/ Tutorial</b>	<b>Practicum</b>	<b>Experiential Learning</b>
2 * 22 NCH = 44 NCH	4 * 15 NCH = 60 NCH	8 * 2 NCH = 16 NCH (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)

4. NPTEL Course on Engineering Graphics by Prof. Nihar Ranjan Patra, IIT, Kanpur

<b>Paper V/Subject Name: Universal Human Values</b>	<b>Subject Code: BHS022A101</b>
<b>L-T-P-C – 2-0-0-2</b>	<b>Credit Units: 02</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to help the students appreciate the essential complementarity between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity which are the core aspirations of all human beings.

**Prerequisites:** None

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Define</b> the basic need of human values in real life	<b>BT 1</b>
<b>CO 2</b>	<b>Understand</b> the importance of following the basic universal human values	<b>BT 2</b>
<b>CO 3</b>	<b>Apply</b> the holistic understanding in one's day-today life so as to keep oneself happy and to socialize with nature, society, etc	<b>BT 3</b>
<b>CO 4</b>	<b>Analyze</b> the harmony within human beings by distinguishing the needs of the self and the body.	<b>BT 4</b>

**Detailed Syllabus:**

<b>Modules</b>	<b>Topics</b>	<b>Course content</b>	<b>Periods</b>
<b>I</b>	<b>Value Education</b>	Right Understanding, Relationship and Physical Facility (Holistic Development and the Role of Education), Understanding Value Education, Sharing about Oneself, Self-exploration as the Process for Value Education, Continuous Happiness and Prosperity – the Basic Human Aspirations, Exploring Human Consciousness, Happiness and Prosperity – Current Scenario, Lectured,	<b>11</b>

		Method to fulfil the Basic Human Aspirations, Exploring Natural Acceptance	
II	<b>Harmony in Human Being</b>	Understanding Human being as the Co-existence of the Self and the Body, distinguishing between the Needs of the Self and the Body, Exploring the difference of Needs of Self and Body, The Body as an Instrument of the Self Understanding Harmony in the Self, Exploring Sources of Imagination in the Self, Harmony of the Self with the Body, Programme to ensure self-regulation and Health, Exploring Harmony of Self with the Body	11
III	<b>Harmony in the Family &amp; Society</b>	Harmony in the Family – the Basic Unit of Human Interaction, 'Trust' – the Foundational Value in Relationship”, Exploring the Feeling of Trust, 'Respect' – as the Right Evaluation, Exploring the Feeling of Respect, Other Feelings, Justice in Human-to-Human Relationship Understanding Harmony in the Society, Vision for the Universal Human Order, Exploring Systems to fulfil Human Goal	11
IV	<b>Harmony in Nature &amp; Implications of Holistic Understanding</b>	Understanding Harmony in the Nature, Interconnectedness, self-regulation and Mutual Fulfilment among the Four Orders of Nature, Exploring the Four Orders of Nature, Realizing Existence as Co-existence at All Levels, The Holistic Perception of Harmony in Existence, Exploring Co-existence in Existence  Natural Acceptance of Human Values, Definitiveness of (Ethical) Human Conduct, Exploring Ethical Human Conduct, A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order, Competence in Professional Ethics, Exploring Humanistic Models in Education, Holistic Technologies, Production Systems and Management Models-Typical Case Studies, Strategies for Transition towards Value-based Life and Profession Exploring Steps of Transition towards Universal Human Order	11
<b>TOTAL</b>			<b>44</b>

<b>Credit Distribution</b>

<b>Paper VI/Subject Name: Design Thinking</b>	<b>Subject Code: COD022S116</b>
<b>L-T-P-C – 0-0-2-1</b>	<b>Credit Units: 01</b>
	<b>Scheme of Evaluation: P</b>

**Objective:**

The objectives of the course are to provide the students with new ways of creative thinking and learn the innovation cycle of Design Thinking process for developing innovative products which useful for a student in preparing for an engineering career.

**Prerequisites:** None

**Course Outcomes:**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Tell</b> the utility of design thinking	<b>BT 1</b>
<b>CO 2</b>	<b>Compare</b> and <b>classify</b> the various learning styles and memory techniques	<b>BT 2</b>
<b>CO 3</b>	<b>Develop</b> new ways of creative thinking and learn the innovation cycle of Design Thinking process for developing innovative products	<b>BT 3</b>
<b>CO 4</b>	<b>Analyze</b> emotional experience and inspect emotional expressions to better understand users while designing innovative products	<b>BT 4</b>
<b>CO 5</b>	<b>Perceive</b> individual differences and its impact on everyday decisions and further Create a better customer experience	<b>BT 5</b>

**Detailed Syllabus:**

<b>Modules</b>	<b>Topics</b>	<b>Course Contents</b>	<b>Hours</b>
<b>I.</b>	<b>Insight to Learning, Remembering Memory and Emotions</b>	Understanding the Learning Process, Kolb's Learning Styles, Assessing and Interpreting. Understanding the Memory process, Problems in retention, Memory enhancement techniques. Understanding Emotions: Experience & Expression, Assessing Empathy, Application with Peers	<b>05</b>
<b>II.</b>	<b>Basis of Design Thinking</b>	Definition of Design Thinking, Need for Design Thinking, Objective of Design Thinking, Concepts & Brainstorming, Stages of Design Thinking Process (explain with examples) – Empathize, Define, Ideate, Prototype, Test. Understanding Creative thinking process, Understanding Problem Solving, Testing Creative Problem Solving	<b>05</b>

<b>III.</b>	<b>Process of Prototype Design &amp; Testing</b>	Process of Engineering Product Design, Design Thinking Approach, Stages of Product Design, Examples of best product designs and functions, Assignment – Engineering Product Design. What is Prototype? Why Prototype? Rapid Prototype Development process, Testing, Sample Example, Test Group Marketing. Understanding Individual differences & Uniqueness, Group Discussion and Activities to encourage the understanding, acceptance and appreciation of Individual differences	<b>06</b>
<b>IV</b>	<b>Customer-Centric Design, Feedback, Re-Design &amp; Re-Create</b>	Practical Examples of Customer Challenges, Use of Design Thinking to Enhance Customer Experience, Parameters of Product experience, Alignment of Customer Expectations with Product Design. Feedback loop, Focus on User Experience, Address “ergonomic challenges, User focused design, rapid prototyping & testing, final product, Final Presentation – “Solving Practical Engineering Problem through Innovative Product Design & Creative Solution”	<b>06</b>
<b>TOTAL</b>			<b>22</b>

**Additional Reading:**

1. [https://www.tutorialspoint.com/hi/design\\_thinking/design\\_thinking\\_tutorial.pdf](https://www.tutorialspoint.com/hi/design_thinking/design_thinking_tutorial.pdf)

**Objective:**

The objectives of the course are to spread the culture of innovation among students, & other stakeholders, to motivate students to ideate and pursue creativity and to train students to become imaginative, creative, and capable of converting their ideas into prototypes.

**Prerequisites:** None

**Course Outcomes**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Label</b> the basic technologies used for innovate	<b>BT 1</b>
CO 2	<b>Understand</b> and use tools for designing electronic systems, including schematic design, PCB layout, and documentation.	<b>BT 2</b>
CO 3	<b>Apply</b> advanced prototyping technologies, including Arduino and Raspberry Pi programming, power supply design, and 3D printing	<b>BT 3</b>
CO 4	<b>Analyze</b> the tools taught	<b>BT 4</b>

**Detailed Syllabus:**

The theory component will include the following:

- Electronic component familiarization, Understanding electronic system design flow. Schematic design and PCB layout and Gerber creation using EagleCAD. Documentation using Doxygen, Google Docs, Overleaf. Version control tools - GIT and GitHub.
- Basic 2D and 3D designing using CAD tools such as FreeCAD, Sketchup, Prusa Slicer, FlatCAM, Inkspace, OpenBSP and VeriCUT.
- Introduction to basic hand tools - Tape measure, combination square, Vernier calliper, hammers, fasteners, wrenches, pliers, saws, tube cutter, chisels, vice and clamps, tapping and threading. Adhesives
- Introduction to Power tools: Power saws, band saw, jigsaw, angle grinder, belt sander, bench grinder, rotary tools. Various types of drill bits
- Familiarization and use of basic measurement instruments - DSO including various triggering modes, DSO probes, DMM, LCR bridge, Signal and function generator. Logic analyzer and MSO. Bench power supply (with 4-wire output)
- Circuit prototyping using (a) breadboard, (b) Zero PCB (c) 'Manhattan' style and (d) custom PCB. Single, double and multilayer PCBs. Single and double-sided PCB prototype fabrication in the lab. Soldering using soldering iron/station. Soldering using a temperature controlled reflow oven. Automated circuit assembly and soldering using pick and place machines.
- Mechanical cutting processes - 3-axis CNC routing, basic turning, milling, drilling and grinding operations, Laser cutting, Laser engraving etc. Basic welding and brazing and other joining techniques for assembly. Concept of Lab aboard a Box.
- Electronic circuit building blocks including common sensors. Arduino and Raspberry Pi programming and use. Digital Input and output. Measuring time and events. PWM. Serial communication. Analog input. Interrupts programming. Power Supply design (Linear and Switching types), Wireless power supply, USB PD, Solar panels, Battery types and charging.
- 3D printing and prototyping technology – 3D printing using FDM, SLS and SLA. Basics of 3D scanning, point cloud data generation for reverse engineering. Prototyping using subtractive

cutting processes. 2D and 3D Structures for prototype building using Laser cutter and CNC routers. Basics of IPR and patents; Accessing and utilizing patent information in IDEA Lab

**Total Lab Hours for the semester = 22 (2 hours per week)**

**Minimum 08 Laboratory experiments based on the following-**

1. Schematic and PCB layout design of a suitable circuit, fabrication and testing of the circuit.
2. Machining of 3D geometry on soft material such as soft wood or modelling wax.
3. 3D scanning of computer mouse geometry surface. 3D printing of scanned geometry using FDM or SLA printer.
4. 2D profile cutting of press fit box/casing in acrylic (3 or 6mm thickness)/cardboard, MDF (2 mm) board using laser cutter & engraver.
5. 2D profile cutting on plywood /MDF (6-12 mm) for press fit designs.
6. Familiarity and use of welding equipment.
7. Familiarity and use of normal and wood lathe.
8. Embedded programming using Arduino and/or Raspberry Pi.
9. Design and implementation of a capstone project involving embedded hardware, software and machined or 3D printed enclosure.

### 6.3 Detailed Syllabus of 2<sup>nd</sup> Semester

<b>Paper I/Subject Name: Chemistry</b>	<b>Subject Code: CHY022C201</b>
<b>L-T-P-C – 3-0-2-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

#### Objective:

The objectives of the course are to s to acquaint the students with the basic phenomenon/concepts of chemistry, the student faces during course of their study in the industry and Engineering field and to understand the new developments and breakthroughs efficiently in engineering and technology

**Prerequisites:** Concepts of +2 level Chemistry

#### Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define the basic properties of chemical reactions	BT 1
CO 2	Interpret periodic properties such as ionization potential, electronegativity, oxidation states, electronegativity and bulk	BT 2
CO 3	Experiment with major chemical reactions that are used in the synthesis of molecules.	BT 3
CO 4	Analyze microscopic chemistry in terms of atomic and molecular orbitals and intermolecular	BT 4

#### Detailed Syllabus:

Module	Topics	Course Content	Periods
I.	Atomic and Molecular Structure	Schrodinger equation. Particle in a box solution and their applications for conjugated molecules and nanoparticles. Forms of the hydrogen atom wave functions and the plots of these functions to explore their spatial variations. Molecular orbitals of diatomic molecules and plots of the multicenter orbitals. Equations for atomic and molecular orbitals. Energy level diagrams of diatomic. Pi-molecular orbitals of butadiene and benzene and aromaticity. Crystal field theory and the energy level diagrams for transition metal ions and their magnetic properties. Band structure of solids and the role of doping on band structures.	16
II.	Spectroscopic Techniques and Applications, Intermolecular Forces and Potential Energy Surfaces	Principles of spectroscopy and selection rules. Electronic spectroscopy. Fluorescence and its applications in medicine. Vibrational and rotational spectroscopy of diatomic molecules. Applications. Nuclear magnetic resonance and magnetic resonance imaging, surface characterization techniques. Diffraction and scattering.  Ionic, dipolar and van Der Waals interactions. Equations of state of real gases and critical phenomena. Potential energy surfaces of H <sub>3</sub> , H <sub>2</sub> F and HCN and trajectories on these surfaces.	17
III.		Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and EMF. Cell potentials, the Nernst equation and applications. Acid base, oxidation	16

	<b>Use of free Energy in Chemical Equilibria and Periodic Properties</b>	reduction and solubility equilibria. Water chemistry. Corrosion. Use of free energy considerations in metallurgy through Ellingham diagrams.  Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular geometries	
<b>IV.</b>	<b>Stereochemistry, Organic Reactions and Synthesis of a Drug Molecule</b>	Representations of 3 dimensional structures, structural isomers and stereoisomers, configurations and symmetry and chirality, enantiomers, diastereomers, optical activity, absolute configurations and conformational analysis. Isomerism in transitional metal compounds  Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings. Synthesis of a commonly used drug molecule	<b>17</b>
<b>TOTAL</b>			<b>66</b>

#### Chemistry Lab Syllabus

**Total Lab Hours for the semester = 30 (2 hours per week)**

#### Minimum 10 Laboratory experiments based on the following-

1. Determination of surface tension and viscosity.
2. Thin layer chromatography.
3. Ion exchange column for removal of hardness of water.
4. Determination of chloride content of water.
5. Colligative properties using freezing point depression.
6. Determination of the rate constant of a reaction.
7. Determination of cell constant and conductance of solutions.
8. Potentiometry - determination of redox potentials and EMFs.
9. Synthesis of a polymer/drug.
10. Saponification/acid value of an oil.
11. Chemical analysis of a salt.
12. Lattice structures and packing of spheres.
13. Models of potential energy surfaces.
14. Chemical oscillations- Iodine clock reaction.
15. Determination of the partition coefficient of a substance between two immiscible liquids.
16. Adsorption of acetic acid by charcoal.
17. Use of the capillary viscosimeters to demonstrate the isoelectric point as the pH of minimum viscosity for gelatin sols and/or coagulation of the white part of egg

<b>Credit Distribution</b>		
<b>Lecture/ Tutorial</b>	<b>Practicum</b>	<b>Experiential Learning</b>
3 * 22 NCH = 66 NCH	2 * 15 NCH = 30 NCH	8 * 3 NCH = 24 NCH (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)

### Text Books

2. Huheey, J.E. Keiter, E.A. Keiter, R.L Medhi, O.K., *Inorganic Chemistry Principles of Structure and Reactivity*, 4<sup>th</sup> Edition, 2006, Pearson Education

### Additional Readings:

1. Organic Chemistry: Structure and Function by K. P. C. Vollhardt and N. E. Schore, 5th Edition, <http://bcs.whfreeman.com/vollhardtschore5e/default.asp>
2. NPTEL Course on Chemistry - I by Prof. Mangala Sunder Krishnan, IITM

<b>Paper II/Subject Name: Mathematics-II</b>	<b>Subject Code: MAT022C202</b>
<b>L-T-P-C - 3-0-1-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

### Objective:

The objectives of the course are to teach the students Mathematics fundamentals necessary to formulate, solve and analyze engineering problems

**Prerequisites:** Concepts of Mathematics I

### Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	List the methodologies used for solving various equations	BT 1
CO 2	Understand essential tool of matrices and linear algebra in a comprehensive manner	BT 2
CO 3	Utilize the essential tools in the field of applied sciences and related fields.	BT 3
CO 4	Analyze and evaluate the qualitative behavior of solutions of systems of differential equations and interpret in the context of an underlying model.	BT 4 & 5

### Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I	Matrices	Linear Systems of Equations; Linear Independence; Rank of a Matrix; Determinant, Inverse of a matrix, rank-nullity theorem; System of linear equations; Symmetric, skew-symmetric and orthogonal matrices; Determinants; Eigenvalues and eigenvectors; Orthogonal transformation; Diagonalization of matrices; Cayley-Hamilton Theorem.	15

<b>II</b>	<b>Differential Equations</b>	Exact, linear and Bernoulli's equations. Equations not of first degree: equations solvable for p, equations solvable for y, equations solvable for x and Clairaut's type. Second order linear differential equations with variable coefficients: Euler-Cauchy equations, solution by variation of parameters; Power series solutions: Legendre's equations and Legendre polynomials, Frobenius method, Bessel's equation and Bessel's functions of the first kind and their properties.	<b>20</b>
<b>III</b>	<b>Complex Variable Differentiation</b>	Differentiation, Cauchy-Riemann equations, analytic functions, harmonic functions, finding harmonic conjugate; elementary analytic functions (exponential, trigonometric, logarithm) and their properties; Conformal mappings, Mobius transformations and their properties.	<b>15</b>
<b>IV</b>	<b>Complex Variable Integration</b>	Contour integrals, Cauchy-Goursat theorem (without proof), Cauchy Integral formula (without proof), Liouville's theorem and Maximum-Modulus theorem (without proof); Taylor's series, zeros of analytic functions, singularities, Laurent's series; Residues, Cauchy Residue theorem (without proof), Evaluation of definite integral involving sine and cosine, Evaluation of certain improper integrals using the Bromwich contour	<b>16</b>
<b>TOTAL</b>			<b>16</b>

Paper III/Subject Name: Biology for Engineers

Subject Code: CSE022C203

L-T-P-C – 3-0-0-3

Credit Units: 03

Scheme of Evaluation: T

**Objective:**

This course focuses on understanding various bio-potentials and their propagation, exploring different types of electrodes and their optimal placement for diverse recordings. It includes the design of bio-amplifiers for physiological recordings and examines measurement techniques for non-physiological parameters. Additionally, it aims to provide familiarity with biochemical measurement methods.

**Prerequisites:** None

**Course Outcomes**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Understand</b> the different physiological processes of human body.	<b>BT 1</b>
CO 2	<b>Explain</b> the different electrode placement for various physiological recording	<b>BT 2</b>
CO 3	<b>Apply</b> bio amplifier for various physiological recording	<b>BT 3</b>
CO 4	<b>Analyze</b> various technique nonelectrical, physiological & biochemical measurements	<b>BT 4</b>

**Detailed Syllabus:**

Modules	Topics	Course content	Hours
I	<b>Fundamentals of Human Physiology: Cellular, Blood, Cardiovascular, and Nervous Systems</b>	Structure and function of Cell & cellular components, Membrane Potential, Action Potential, Generation and Conduction. Blood Cell, Composition, Fluid and electrolytic balance, Blood Groups, Estimation of RBC, WBC and platelet.  Cardiovascular system, Heart and vascular system, ECG, Blood Pressure, Homeostasis, Cardiac output, Coronary and Peripheral Circulation, Heart Sounds Nervous System, Structure and functions of Neurons, Synapse, Reflex action and Receptors, Velocity of Conduction of Nerve Impulses, Nervous control of Heart.	15
II	<b>Transducers</b>	Classification, selecting of transducers, circuit based on transduction. Temperature transducers, Displacement transducer, Pressure transducer, catheter tip transducers. Photoelectric transducers, Flow transducers, Piezoelectric transducers and their applications	10

Modules	Topics	Course content	Hours
III	<b>Biomedical Signal Acquisition: Principles and Applications of Bioelectrical Recordings</b>	Electrocardiogram (ECG), Electroencephalogram (EEG), Electromyogram (EMG), Electrooculogram (EOG), Electroretinogram (ERG), Recording Electrodes – Electrode-tissue interface, polarization, skin contact impedance, motion artifacts, Silver-Silver Chloride electrodes, Electrodes for ECG, Electrodes for EEG, Electrodes of EMG, Electrical conductivity of electrode jellies and creams, microelectrodes, Needle electrodes	15
IV	<b>Advances in Biosensing, Bioprinting, and Biomedical Innovations</b>	Biosensors Chemoreceptors, hot and cold receptors, baro receptors, sensors for smell, sound, vision, osmolality and taste. Transducers for the measurement of ions and dissolved gases. Ion exchange membrane electrodes, Measurement of pH, Glass pH electrodes, Measurement of pO <sub>2</sub> , Measurement of pCO <sub>2</sub> . ISFET for glucose, urea.  Bioprinting techniques and materials, 3D printing of ear, bone and skin, Artificial intelligence for disease diagnosis, Biocomputing, Bioimaging.	20
<b>TOTAL</b>			<b>60</b>

**Paper IV/Subject Name: Programming for Problem Solving**

**Subject Code: CSE022C204**

**L-T-P-C – 3-0-2-4**

**Credit Units: 04**

**Scheme of Evaluation: TP**

**Objective:**

The objectives of the course are to make the students capable of using C programming to solve basic as well as advanced computing problems.

**Prerequisites:** None

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>List</b> the various constructs used in programming	<b>BT 1</b>
<b>CO 2</b>	<b>Demonstrate</b> the working of C programming language.	<b>BT 2</b>
<b>CO 3</b>	<b>Apply</b> the programming concepts to solve various problems.	<b>BT 3</b>
<b>CO 4</b>	<b>Analyze</b> and debug the errors while writing the programs.	<b>BT 4</b>
<b>CO 5</b>	<b>Assess</b> and design a new algorithm to solve a new real-life problem.	<b>BT 5</b>

**Detailed Syllabus:**

<b>Modules</b>	<b>Topics</b>	<b>Course content</b>	<b>Hours</b>
<b>I</b>	<b>Fundamentals of Programming</b>	Introduction to Programming; Introduction to components of a computer system (disks, memory, processor, where a program is stored and executed, operating system, compilers etc.) Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart/Pseudocode with examples. From algorithms to programs; source code, variables (with data types) variables and memory locations, Syntax and Logical Errors in compilation, object and executable code.	<b>15</b>
<b>II</b>	<b>Expressions, Conditional Operators and Loops</b>	Arithmetic expressions and precedence. Conditional Branching and Loops. Writing and evaluation of conditionals and consequent branching. Iteration and loops. Arrays, Arrays (1-D, 2-D), Character arrays and Strings	<b>15</b>
<b>III</b>	<b>Functions, Recursion, Sorting</b>	Basic Algorithms, Searching, Basic Sorting Algorithms (Bubble, Insertion and Selection), Finding roots of equations, notion of order of complexity through example programs (no formal definition required). Function, Functions (including using built in libraries), Parameter passing in functions, call by value, Passing arrays to functions: idea of call by reference. Recursion, Recursion as a different way of solving problems. Example programs, such as Finding Factorial, Fibonacci series, Ackerman function etc. Quick sort or Merge sort	<b>15</b>

Modules	Topics	Course content	Hours
IV	Advanced Programming Concepts using C	Structures, Defining structures and Array of Structures, Pointers, Idea of pointers, Defining pointers, Use of Pointers in self-referential structures, notion of linked list (no implementation), File handling.	15
<b>TOTAL</b>			<b>60</b>

### Programming for Problem Solving Lab Syllabus

#### Detailed Syllabus:

**Total Lab Hours for the semester = 30 (2 hours per week)**

#### Minimum 20 Laboratory experiments based on the following-

1. Character set, Tokens, Keywords and Identifiers, Constants, variables, data types, statements, comments, declaration of storage class, assigning values to variables.
2. Managing I/O, reading and writing characters, formatted Input/output.
3. Arithmetic operators, relational operators, logical operators, assignment operators, increment & decrement operators, conditional operators, bitwise operators, special operators.
4. Importance of decision making, decision making with if statement, if-else statement, nested if-else statements, switch-case statement.
5. Importance of iterative statements, the while statement, do-while statement, for statement, nested for looping.
6. Significance of Arrays, creation and use of one & two-dimensional arrays
7. Declaration and use of string variables, reading and writing strings.
8. Benefits of user-defined functions, creation and use of user-defined functions, parameter passing, return types.
9. Use of Pointers, declaration & initialization of pointer variables, accessing a variable through its pointer.
10. Defining, opening & closing files in C.

2. NPTEL course on Introduction to Programming in C by Prof. Satyadev Nandakumar, IIT, Kanpur

**Paper V/Subject Name: Workshop Practices**

**Subject Code: MEE022C215**

**L-T-P-C – 0-0-4-2**

**Credit Units: 02**

**Scheme of Evaluation: P**

**Objective:**

The objectives of the course are to provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering.

**Prerequisites:** None

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Label</b> the various techniques used under mechanical engineering	<b>BT 1</b>
<b>CO 2</b>	<b>Understand</b> the different manufacturing processes which are commonly employed in the industry	<b>BT 2</b>
<b>CO 3</b>	<b>Utilize</b> tools, instruments and techniques learnt to perform basic household chores in terms of house wiring, carpentry etc.	<b>BT 3</b>
<b>CO 4</b>	<b>Experiment</b> using the tools and techniques learnt for various purposes and decide on the best prospect.	<b>BT 4</b>

**Detailed Syllabus:**

**Total Lab Hours for the semester = 40 (4 hours per week)**

**Minimum 10 Laboratory experiments based on the following-**

The lecture sessions will be on the following topics:

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods.
- CNC machining, Additive manufacturing.
- Fitting operations & power tools.
- Electrical & Electronics.
- Carpentry.
- Plastic moulding, glass cutting.
- Metal casting.
- Welding (arc welding & gas welding), brazing g topics:

And the lab sessions will on the topics:

- Machine shop
- Fitting shop
- Carpentry
- Electrical & Electronics
- Welding shop (Arc welding + Gas welding)
- Casting
- Smithy
- Plastic moulding & Glass Cutting

<b>Paper VI/Subject Name: English for Technical Writing</b>	<b>Subject Code: CEN022A201</b>
<b>L-T-P-C – 2-0-0-2</b>	<b>Credit Units: 02</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to provide learning environment to practice listening, speaking, reading and writing skills, to assist the students to carry on the tasks and activities through guided instructions and materials and to effectively integrate English language learning with employability skills and training.

**Prerequisites:** None

**Course Outcomes**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define the various forms of communication	BT 1
CO 2	Understand basic proficiency in English.	BT 2
CO 3	Develop reading and listening comprehension, writing and speaking skills.	BT 3
CO 4	Analyze the type of communication	BT 4

**Detailed Syllabus:**

Modules	Topics	Course content	Hours
I	<b>Vocabulary Building</b>	The concept of Word Formation, Root words from foreign languages and their use in English, Acquaintance with prefixes and suffixes from foreign languages in English to form derivatives, Synonyms, antonyms, and standard abbreviations.	<b>10</b>
II	<b>Basic Writing Skills</b>	Sentence Structures, Use of phrases and clauses in sentences, Importance of proper punctuation, creating coherence, organizing principles of paragraphs in documents, Techniques for writing precisely, Subject-verb agreement, Noun-pronoun agreement, Misplaced modifiers, Articles, Prepositions, Redundancies, Clichés	<b>10</b>
III	<b>Writing Practices</b>	Nature and Style of sensible Writing, Describing, Defining 1.3. Classifying, providing examples or evidence, Writing introduction and conclusion, Comprehension, Précis Writing, Essay Writing	<b>10</b>
IV	<b>Oral Communication</b>	Listening Comprehension, Pronunciation, Intonation, Stress and Rhythm, Common Everyday Situations: Conversations and Dialogues, Communication at Workplace, Interviews, Formal Presentations	<b>10</b>
<b>TOTAL</b>			<b>40</b>

Paper VII/Subject Name: Sports and Yoga

Subject Code: CSE022C217

L-T-P-C – 0-0-2-1

Credit Units: 01

Scheme of Evaluation: P

**Objective:**

The objectives of the course are to make the students understand the importance of sound health and fitness principles as they relate to better health, to expose the students to a variety of physical and yogic activities aimed at stimulating their continued inquiry about Yoga, physical education, health and fitness and to develop among students an appreciation of physical activity as a lifetime pursuit and a means to better health.

**Prerequisites:** None

**Course Outcomes**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Choose the best form of yoga/ exercise for them	BT 1
CO 2	Understand basic skills associated with yoga and physical activities including strength and flexibility, balance and coordination	BT 2
CO 3	Experiment with different forms of yoga to keep oneself physically fit and mentally strong	BT 3
CO 4	Assess current personal fitness levels	BT 4

**Detailed Syllabus:**

Modules	Topics	Course content	Periods
I	Physical Education, Olympic Movement, Fitness, Wellness & Lifestyle	Meaning & definition of Physical Education. Aims & Objectives of Physical Education. Changing trends in Physical Education, Ancient & Modern Olympics (Summer & Winter), Olympic Symbols, Ideals, Objectives & Values, Awards and Honours in the field of Sports in India (Dronacharya Award, Arjuna Award, Dhayanchand Award, Rajiv Gandhi Khel Ratna Award etc., Meaning & Importance of Physical Fitness & Wellness, Components of Physical fitness, o Components of Health-related fitness, Components of wellness, Preventing Health Threats through Lifestyle Change, Concept of Positive Lifestyle	5
II	Anatomy & Physiology in Physical Education, Sports, Yoga & Postures	Define Anatomy, Physiology & Its Importance, ffect of exercise on the functioning of Various Body Systems. (Circulatory System, Respiratory System, Neuro-Muscular System etc.), Meaning & Importance of Kinesiology & Biomechanics in Physical Edu. & Sports, o Newton’s Law of Motion & its application in sports. o Friction and its effects in Sports, Meaning and Concept of Postures, Causes of Bad Posture. Advantages & disadvantages of weight training. Concept & advantages of Correct Posture. Common Postural Deformities – Knock Knee; Flat Foot; Round Shoulders; Lordosis, Kyphosis, Bow Legs and Scoliosis. Corrective Measures for Postural Deformities	5

<b>III</b>	<b>Yoga &amp; Lifestyle</b>	Meaning & Importance of Yoga, Elements of Yoga, Asanas, Pranayama, Meditation & Yogic Kriyas, yoga for concentration & related Asanas (Sukhasana; Tadasana; Padmasana & Shashankasana) Relaxation Techniques for improving concentration - Yog-nidra, Asanas as preventive measures. Hypertension: Tadasana, Vajrasana, Pavan Muktasana, Ardha Chakrasana, Bhujangasana, Sharasana. Obesity: Procedure, Benefits & contraindications for Vajrasana, Hastasana, Trikonasana, Ardh Matsyendrasana. Back Pain: Tadasana, Ardh Matsyendrasana, Vakrasana, Shalabhasana, Bhujangasana. Diabetes: Procedure, Benefits & contraindications for Bhujangasana, Paschimottasana, Pavan Muktasana, Ardh Matsyendrasana. Asthema: Procedure, Benefits & contraindications for Sukhasana, Chakrasana, Gomukhasana, Parvatasana, Bhujangasana, Paschimottasana, Matsyasana.	<b>5</b>
<b>IV</b>	<b>Training, Planning and Psychology in Sports</b>	Meaning of Training, Warming up and limbering down, Skill, Technique & Style, Meaning and Objectives of Planning. Tournament – Knock-Out, League/Round Robin & Combination. Definition & Importance of Psychology in Physical Edu. & Sports, Define & Differentiate Between Growth & Development, Adolescent Problems & Their Management, Emotion: Concept, Type & Controlling of emotions, Meaning, Concept & Types of Aggressions in Sports. Psychological benefits of exercise. Anxiety & Fear and its effects on Sports Performance. Motivation, its type & techniques. Understanding Stress & Coping Strategies	<b>5</b>
<b>TOTAL</b>			<b>20</b>

## 6.4 Detailed Syllabus of 3<sup>rd</sup> Semester

<b>Paper I/Subject Name: Discrete Mathematics</b>	<b>Subject Code: MAT022C301</b>
<b>L-T-P-C – 3-1-0-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: T</b>

### Objective:

The objectives of the course are to make the students learn the concept of mathematical logic, sets, relations, and functions, generating functions and recurrence relations, Graph Theory for solving engineering related problems.

**Prerequisites:** Concepts of Mathematics I, II

### Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Understand</b> the concept of logic, sets, relations and functions to solve problems.	<b>BT 2</b>
CO 2	<b>Apply</b> the concepts learnt to solve computer science related problems.	<b>BT 3</b>
CO 3	<b>Analyze</b> and evaluate the solutions.	<b>BT 4</b>

### Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I	<b>Sets, Relations, Functions &amp; Algebraic Structures</b>	Operations and Laws of Sets, Binary, Relation, Partial Ordering Relation, Equivalence Relation, Functions, Inverse and Composite Function, Finite and infinite Sets, Countable and uncountable Sets, Poset, Lattice. The Well-Ordering Principle, The Division algorithm: Prime numbers, The Greatest Common Divisor, The least common multiple, Euclidean Algorithm, The Fundamental Theorem of Arithmetic, Congruence, Euler's phi function. Algebraic Structures with one Binary Operation, Semi Groups, Monoids, Groups, Congruence Relation and Quotient Structures, Free and Cyclic Monoids and Groups, Permutation Groups, Normal Subgroups, Algebraic Structures with two Binary Operation, Rings, Integral Domain and Fields.	13
II	<b>Graph Theory and Combinatorics</b>	Graphs and their properties, Degree, subgraphs, walks, paths and circuits, connected and disconnected graphs, Isomorphism, Eulerian and Hamiltonian graphs, Complete graphs, Bipartite graph, Trees, Properties of trees, Pendant vertex, Distance and Centers, Binary tree, Spanning trees, Planar graphs, Matrix representation of graphs, Chromatic number, Chromatic polynomial, Five colours theorem. Pigeon-hole principle, permutation and combination, Recurrence relations, Generating functions.	20

<b>III</b>	<b>Propositional Logic</b>	Proposition, connectives, tautology, contradiction, logical equivalence, normal forms-DNF, CNF, argument, Validity of argument, fallacy, Rules of Inference, Quantifiers. Boolean Algebra and Boolean Ring, Identities of Boolean Algebra, Duality, Representation of Boolean Function.	<b>20</b>
<b>IV</b>	<b>Probability</b>	Definition of Probability, Classical, Relative Frequency, and Axiomatic Approaches, Basic Terminologies: Sample Space, Events, Outcomes, Types of Events: Mutually Exclusive, Exhaustive, Independent, Dependent, Addition Theorem of Probability, Conditional Probability, Multiplication Theorem of Probability, Bayes' Theorem and Its Applications, Discrete and Continuous Random Variables, Probability Mass Function (PMF) and Probability Density Function (PDF), Expectation, Variance, and Standard Deviation, Common Discrete Distributions, Joint and Marginal Probability, Independent and Dependent Events, Conditional Independence	<b>13</b>
<b>TOTAL</b>			<b>66</b>

<b>Credit Distribution</b>		
<b>Lecture/ Tutorial</b>	<b>Practicum</b>	<b>Experiential Learning</b>
3 * 22 NCH = 66 NCH	2 * 15 NCH = 30 NCH	8 * 3 NCH = 24 NCH (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)

<b>Paper II/Subject Name: Data Structure &amp; Algorithms</b>	<b>Subject Code: ARI022C302</b>
<b>L-T-P-C – 3-0-2-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

**Objective:**

The objectives of the course are to make the students understand about the data structures, how to implement them in C, their advantages and drawbacks, & how they can be overcome.

**Prerequisites:** Concepts of Computer Programming

**Course Outcomes**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Define</b> various data structures used in programming.	<b>BT 1</b>
CO 2	<b>Understand</b> the basic constructs of data structure and its implementation.	<b>BT 2</b>
CO 3	<b>Utilise</b> the appropriate data structures to solve a given problem.	<b>BT 3</b>
CO 4	<b>Analyse</b> and <b>evaluate</b> the data structures used for problem solving	<b>BT 4 &amp; 5</b>

### Detailed Syllabus:

Modules	Topics	Course content	Hours
I	<b>Linear Data Structure-I</b>	<p>a. Introduction: Why we need data structure? Concepts of data structures: Data and data structure, Abstract Data Type and Data Type. Algorithms and programs, basic idea of pseudo-code. Algorithm efficiency and analysis, time and space analysis of algorithms – order notations.</p> <p>b. Array : Different representations – row major, column major. Sparse matrix - its implementation and usage. Array representation of polynomials.</p> <p>c. Linked List: Singly linked list, circular linked list, doubly linked list, linked list representation of polynomial and applications.</p>	<b>15</b>
II	<b>Linear Data Structure-I</b>	<p><b>a. Stack and Queue:</b> Stack and its implementations (using array, using linked list applications. Queue, circular queue, dequeuers. Implementation of queue- both linear and circular (using array, using linked list), applications.</p> <p><b>b. Recursion:</b> Principles of recursion – use of stack, differences between recursion and iteration, tail recursion. Applications - The Tower of Hanoi, Eight Queens Puzzle.</p>	<b>18</b>
III	<b>Non-Linear Data Structures</b>	<p><b>a. Trees:</b> Basic terminologies, forest, tree representation (using array, using linked list). Binary trees - binary tree traversal (pre-, in-, post- order), threaded binary tree (left, right, full) - non-recursive traversal algorithms using threaded binary tree, expression tree. Binary search tree- operations (creation, insertion, deletion, searching). Height balanced binary tree – AVL tree (insertion, deletion with examples only).</p> <p><b>b. Graphs:</b> Graph definitions and concepts (directed/undirected graph, weighted/un-weighted edges, sub-graph, degree, cut-vertex/articulation point, pendant node, clique, complete graph, connected components – strongly connected component, weakly connected component, path, shortest path, isomorphism). Graph representations/storage implementations – adjacency matrix, adjacency list, adjacency multi-list. Graph traversal and connectivity – Depth-first search (DFS), Breadth-first search (BFS) – concepts of edges</p>	<b>18</b>

		used in DFS and BFS (tree-edge, back-edge, cross-edge, and forward-edge), applications. Minimal spanning tree – Prim’s algorithm (basic idea of greedy methods). B-Trees operation	
IV	<b>Searching and Sorting</b>	<b>a. Sorting Algorithms:</b> Bubble sort and its optimizations, insertion sort, shell sort, selection sort, merge sort, quick sort, heap sort (concept of max heap, application – priority queue), radix sort. <b>b. Searching Algorithms:</b> Sequential search, binary search, interpolation search.	15
<b>TOTAL</b>			<b>66</b>

<b>Data Structures and Algorithms Lab Syllabus</b>
--

**Detailed Syllabus:**

**Total Lab Hours for the semester = 30 (2 hours per week)**

**Minimum 20 Laboratory experiments based on the following-**

1. Some common programs of C as revision.
2. Programs on Arrays- Traversal, Insertion, Deletion, Polynomial Representation, etc.
3. Programs on Linked List- Creation Insertion, Deletion, Polynomial Representation, etc.
4. Programs on Stacks-Creation, Push Pop, Infix to Postfix Conversion, Evaluation.
5. Programs on Queues-Creation, Insertion, Deletion, etc.
6. Programs on Trees- Binary Tree Creation, Tree Traversal, BST
7. Programs on Searching- Linear Search, Binary Search
8. Programs on Sorting- Bubble Sort, Insertion Sort, Selection Sort, Quick Sort, Merge Sort, Heap Sort.

<b>Credit Distribution</b>		
<b>Lecture/ Tutorial</b>	<b>Practicum</b>	<b>Experiential Learning</b>

4. E. Balagurusamy, *Data Structures Using C*, 1<sup>st</sup> Edition, 2017, McGraw Hill Education.

**Objective:**

The objectives of the course are to explain about the machine instructions and basic computer organization and I/O subsystems and pipelining processing

**Prerequisites:** Fundamental concepts of Digital Logic

**Course Outcomes:**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Define</b> the different hardware and its working in a Computer Systems in architectural level	<b>BT 1</b>
<b>CO 2</b>	<b>Demonstrate</b> computer architecture concepts related to design of modern processors, memories, and I/O	<b>BT 2</b>
<b>CO 3</b>	<b>Solve</b> problems related to computer Organization and Architecture	<b>BT 3</b>
<b>CO 4</b>	<b>Analyse</b> the performance of commercially available computers in architectural level.	<b>BT 4</b>

**Detailed Syllabus:**

<b>Modules</b>	<b>Topics</b>	<b>Course Content</b>	<b>Hours</b>
<b>I</b>	<b>Basic organization of computers and machine instructions</b>	Block level description of the functional units as related to the execution of a program; Fetch, decode and execute cycle. Instruction set architectures, Assembly language programming, addressing modes, instruction cycles, registers and storage, addressing modes; discussions about RISC versus CISC architectures; Inside a CPU.	<b>15</b>
<b>II</b>	<b>Information representation</b>	Floating point representation (IEEE 754), computer arithmetic and their implementation; Fixed-Point Arithmetic: Addition, Subtraction, Multiplication and Division, Arithmetic Logic Units control and data path, data path components, design of ALU and data path, controller design; Hardwired and Microprogrammed Control	<b>18</b>
<b>III</b>	<b>Memory Technology</b>	Static and dynamic memory, Random Access and Serial Access Memories, Cache memory and Memory Hierarchy, Address Mapping, Cache updation schemes, Virtual memory and memory management unit.	<b>18</b>
<b>IV</b>	<b>I/O subsystems &amp; Pipeline Processing</b>	Input-Output devices such as Disk, CD-ROM, Printer etc.; Interfacing with IO devices, keyboard and display interfaces; Basic concepts Bus Control, Read Write operations, Programmed IO, Concept of handshaking, Polled and Interrupt-driven I/O, DMA data transfer. Instruction and Arithmetic Pipeline, Pipeline hazards and their resolution, Parallel Processing.	<b>15</b>

<b>Paper IV/Subject Name: Digital Logic and System Design</b>	<b>Subject Code: ARI022C304</b>
<b>L-T-P-C – 3-0-2-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

**Objective:**

The objectives of the course are to make the students understand the simplification of Boolean expression and how to implement with various gates.

**Prerequisites:** None

**Course Outcomes**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Define</b> the different types of circuits in system design	<b>BT 1</b>
CO 2	<b>Understand</b> the concepts of combinational and sequential circuit design	<b>BT 2</b>
CO 3	<b>Apply</b> the concepts learnt to design digital circuits.	<b>BT 3</b>
CO 4	<b>Analyze</b> the outputs produced and behaviour of the different circuits.	<b>BT 4</b>

**Detailed Syllabus:**

Modules	Topics	Course Content	Hours
I	<b>Fundamental of Digital Electronics &amp; Boolean algebra and its simplification</b>	Review of number system; Position number system – decimal, binary, octal and hexadecimal, number base conversion. Representation of negative binary numbers. Codes – BCD Gray, Excess -3 Digital signal, logic gates: AND, OR, NOT, NOR, EX-OR, EX-NOR Axioms and basic theorem of Boolean algebra. Truth table, logic function and their realization, standard representation (canonical forms) of logic gates-SOP and POS forms, MIN terms and MAX terms Simplification of logic function: K-map of 2, 3, 4 and 5 variables. Simplification of algebra and by map method. Don't care condition. Quine Mcluskey methods of simplification. Synthesis using AND, OR and INVERT and then to convert to NAND or NOR implementation	<b>18</b>
II	<b>Combinational logic circuit design</b>	Combinational logic circuit and building blocks. Binary adders and subtractors. Carry look ahead adder. Encoders, Decoders, Multiplexers, Demultiplexers, Comparators, parity generators, etc. Realization of logic gates functions through decoders and multiplexers.	<b>15</b>
III	<b>Sequential circuits</b>	Flip flops: truth table and state table SR, JK, TD, race around condition, master slave conversion of flip-flops. Sequential shift register, sequence generator. Counter s: asynchronous and d Synchronous generators. Ring counter s and Johnson counter, up. Down counter modulo – N counter. Design of Synchronous sequential circuit.	<b>15</b>
IV	<b>Digital logic families and programmable logic devices</b>	Switching mode operation of PN junction, Bipolar and MOD device Bipolar families: RTL, DTL, DCTL, HTL, TTL, ECL, MOS, and CMOS logic families, Tristate logic. Gate properties fan in, fan out, propagation delay and power delay product. RAM and ROM their uses, SSI, MSI LSI and V LSI devices. Introduction to PLA, PAL TO FPGA and CPLDS, some commonly used digital ICs	<b>18</b>
<b>TOTAL</b>			<b>66</b>

### Digital Logic and System Design Lab Syllabus

#### Detailed Syllabus:

**Total Lab Hours for the semester = 30 (2 hours per week)**

**Minimum 08 Laboratory experiments based on the following-**

- To realize a transistorized AND Gate
- To realize a transistorized OR Gate
- To realize a transistorized NOT Gate
- To realize a transistorized NAND Gate
- To realize a transistorized NOR Gate
- To verify the truth tables of logic gates using ICs
- Realization of half and full adder
- Realization of half and full subtractor
- Realization of 2:1 and 1:2 DEMUX
- Realization of Encoder and Decoder

<b>Paper V/Subject Name: Programming with Python</b>	<b>Subject Code: ARI022G306</b>
<b>L-T-P-C – 3-0-0-3</b>	<b>Credit Units: 03</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to teach the students about Programming with Python and use it to solve real world problems.

**Prerequisites:** Fundamentals of Computers

**Course Outcomes**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define semantics and syntax of Typescripts.	BT 1
CO 2	Understand static types and know how to port untyped JavaScript	BT 2
CO 3	Apply the concepts learnt to create Single Page Web Applications (SPA) using React, Typescript and Tailwind CSS.	BT 3
CO 4	Inspect different elements of front-end development	BT 4

**Detailed Syllabus:**

Modules	Topics	Course content	Periods
I	<b>Introduction to Python</b>	Introduction to Python Programming: Python interpreter/shell, indentation; identifiers and keywords; literals, numbers, and strings; operators (arithmetic operator, relational operator, Boolean operator, assignment, operator, ternary operator and bitwise operator) and expressions	18
II	<b>Programming With Python</b>	Input and output statements, defining functions, control statements (conditional statements, loop control statements, break, continue and pass, exit function.), default arguments,	18
III	<b>Python Functions and Strings</b>	Python Functions, Python Lambda, Python Arrays, Python Classes/Object, Inheritance, Iterator, Polymorphism, Scope, Modules, Dates, Maths, JSON, RegEx, PIP, User Input, Strings	15
IV	<b>Python Modules</b>	Introduction to Numpy, Pandas, SciPy, Django	15
<b>Total</b>			<b>66</b>

**Introduction to Python Programming Lab**

**Detailed Syllabus:**

**Total Lab Hours for the semester = 48 (4 hours per week)**

**Minimum 20 Laboratory experiments based on the following-**

1. **Hello World Program:**
    - Write a simple Python program to print "Hello, World!" to the console.
  2. **Variable Declaration and Printing:**
    - Practice declaring variables of different types (int, float, string) and printing their values.
  3. **Basic Arithmetic Operations:**
    - Write Python scripts to perform basic arithmetic operations such as addition, subtraction, multiplication, and division.
  4. **Conditional Statements:**
    - Create programs using if-else statements to perform tasks based on certain conditions.
  5. **Loops (for and while):**
    - Practice writing for and while loops to iterate over sequences or execute code repeatedly.
  6. **Lists and List Operations:**
    - Explore lists in Python and perform operations like appending, removing, and accessing elements.
- Level: Intermediate**
7. **Functions:**
    - Define and call functions to encapsulate reusable code blocks. Practice passing arguments and returning values from functions.
  8. **String Manipulation:**
    - Work on tasks involving string manipulation, such as concatenation, slicing, and searching.
  9. **File Handling:**
    - Write Python scripts to read from and write to files. Practice handling exceptions during file operations.
  10. **Dictionaries and Sets:**
    - Experiment with dictionaries and sets in Python. Perform operations like adding, removing, and accessing elements in dictionaries and sets.
  11. **Object-Oriented Programming (OOP) Concepts:**

- Introduce students to OOP concepts like classes, objects, inheritance, and polymorphism. Have them implement simple classes and explore inheritance hierarchies.
- 12. Exception Handling:**
    - Practice handling exceptions using try-except blocks to gracefully manage errors in Python programs.
  - 13. Data Structures and Algorithms:**
    - Implement common data structures (e.g., stacks, queues, linked lists) and algorithms (e.g., sorting, searching) using Python.
  - 14. Regular Expressions:**
    - Introduce regular expressions and their usage in Python for pattern matching and text processing tasks.
  - 15. Modules and Packages:**
    - Explore the concept of modules and packages in Python. Have students create their own modules and packages and import them into other scripts.
  - 16. GUI Programming with Tkinter:**
    - Introduce GUI programming using Tkinter. Have students create simple graphical user interfaces (GUIs) for basic applications.

National Credit Hours		
Lecture/ Tutorial	Practicum	Experiential Learning
3*22 NCH = 66 NCH	--	3*8 = 24 NCH (Problem Solving, Seminar, Case Study, Discussion, Internship, Project)

**6.5 Detailed Syllabus of 4<sup>th</sup> Semester**

Paper I/Subject Name: OOP using C++

Subject Code: ARI022C401

**Objective:**

The objectives of the course are to make the students understand how C++ improves C with object-oriented features and to explain problem solving and programming skills in C++ with extensive programming projects.

**Prerequisites:** Fundamentals of Computer Programming

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Define</b> and <b>understand</b> the basic concepts of OOP.	<b>BT 1 &amp; 2</b>
<b>CO 2</b>	<b>Apply</b> the concepts learnt to write efficient programs in C++.	<b>BT 3</b>
<b>CO 3</b>	<b>Analyze</b> a problem and construct a C++ program that solves it.	<b>BT 4</b>
<b>CO 4</b>	<b>Assess</b> a C++ program and describe ways to improve it.	<b>BT 5</b>

**Detailed Syllabus:**

<b>Modules</b>	<b>Topics</b>	<b>Course content</b>	<b>Periods</b>
<b>I</b>	<b>Introduction</b>	Introduction, Need, Characteristics, Difference between POP and OOP, Basic concepts of OOP, Features, Applications of OOP. Revision of topics like data types, keywords, identifiers, tokens, reference variables, different operators, conditional and loop control structures.	<b>15</b>
<b>II</b>	<b>Classes and Objects</b>	Definition of class, object, Difference between class and structure, class definitions, member functions, access specifiers. Objects Dynamic Creation and initialization, Passing and Returning objects, Object assignment and array of objects. Constructors Types, Destructors, Nesting member function, Private member function , Inline functions. Static class members, Function prototyping, Call by reference, Return by reference, Default Argument, Friend functions, this pointer.	<b>18</b>
<b>III</b>	<b>Inheritance and Polymorphism</b>	Types of Inheritance; Base and Derived classes, Syntax of derived classes, access to the base class; Types of Inheritance, Multiple inheritance, Virtual Base classes, Constructors and Destructors in Inheritance, Container classes, Abstract Classes. Polymorphism: Compile time(Early/Static binding), Overloading functions and operators,Overloading new and delete operators, Run time polymorphism(Late/Dynamic Binding), Virtual functions, Pure Virtual functions, Virtual Destructors, Review of Virtual base classes,	<b>18</b>

<b>IV</b>	<b>Templates, Exception and File Handling</b>	Templates–Uses, Generic classes, Class templates, Function templates, Advance templates. Examples. Exception handling-Advantages, Try catch and throw clauses, Examples, Manipulators, different examples of manipulators. Pointer types-uses; Dynamic memory allocation techniques, garbagecollection, Linked list, generic pointers; FilesOpen, Close, Read and Write; File attributes, File management	<b>15</b>
<b>TOTAL</b>			<b>66</b>

**OOP using C++ Lab Syllabus**

**Detailed Syllabus:**

**Total Lab Hours for the semester = 30 (2 hours per week)**

**Minimum 20 Laboratory experiments based on the following-**

1. Write a C++ program to display "HELLO WORLD".
2. Write a C++ program that will ask the temperature in Fahrenheit and display in Celsius
3. Write a C++ program to print the following output using forloop.
 

```

1
2 2
3 3 3
4 4 4 4

```
4. Write a C++ program to reverse a number using do-whileloop
5. Write a C++ program to find out the factorial of a number using while loop
6. Write a C++ program to read an integer array and display it.
7. Write a C++ program to read a character array and display it.
8. Write a C++ program to find out the maximum of three number using if-elsestatement
9. Write a C++ program to implement the concept of static data member in class.
10. Write a C++ program to implement the concept of static function in class.
11. Write a C++ program using function with default argument.
12. Write a C++ program to illustrate the use of objects as function arguments (which performs the addition of time in the hour and minutes format)
13. Write a C++ program to illustrate the use of friend function.
14. Write a C++ program to illustrate how an object can be created (within a function) and returned to another function
15. Write a C++ program to illustrate the use of constructors and destructors.
16. Write a C++ program to illustrate the use of copy constructor.
17. Write a C++ program to implement single inheritance (private/public)
18. Write a C++ program to implement multilevel inheritance
19. Write a C++ program to implement multiple inheritances.
20. Write a C++ program to illustrate the use of virtual base class.
21. Write a C++ program to overload unary minus operator
22. Write a C++ program to overload binary „+“ operator
23. Write a C++ program to illustrate how an operator can be overloaded using friend function.
24. Write a C++ program to illustrate the use of run time polymorphism.
25. Write a C++ program to swap two variable using function template
26. Write a C++ program to implement try(), catch(), throw()function.
27. Write a C++ program to implement this pointer
28. Write a C++ program to illustrate the use of pointers to derived objects
29. Write a C++ program to illustrate the use of virtual function
30. Write a C++ program to open and close a file using open(), close() function
31. Write a C++ program to illustrate the use of read(), write() function

<b>Paper II/Subject Name: Database Management Systems</b>	<b>Subject Code: ARI022C402</b>
<b>L-T-P-C - 3-0-2-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

**Objective:**

The objectives of the course are to make the students learn about databases and the process of designing and constructing data models.

**Prerequisites:** C/C++, Concepts of Data Structures.

**Course Outcomes**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Define</b> and <b>understand</b> the basic concepts and applications of database systems	<b>BT 1 &amp; 2</b>
CO 2	<b>Apply</b> the basic concepts of MySql and write queries using it.	<b>BT 3</b>
CO3	<b>Analyze</b> the designed database for normalization.	<b>BT 4</b>
CO 4	<b>Evaluate</b> the process of transaction processing and concurrency control	<b>BT 5</b>

**Detailed Syllabus:**

Modules	Topics	Course content	Periods
I	<b>Basic Concepts</b>	Purpose of database systems-Components of DBMS –DBMS Architecture-Three Tier Architecture, and Data Independence-Data modelling -Entity Relationship Model and Diagram, Relational –Network-Hierarchical and object oriented models-Data Modelling using the Entity Relationship Model.	9
II	<b>Structure of Relational Databases</b>	Relational databases –relational algebra-relational calculus, tuple and domain calculus. Data definition with SQL, insert, delete and update statements in SQL –views –data manipulation with SQL. assertions –triggers, Cursors	9

<b>III</b>	<b>Database Design</b>	Design guidelines–Relational database design –Integrity Constraints –Domain Constraints-Referential integrity – Functional Dependency-Normalization using Functional Dependencies, Normal forms based on primary keys-general definitions of Second and Third Normal Forms. Boyce-Codd Normal Form–Multi-valued Dependencies and Forth Normal Form –Join Dependencies and Fifth Normal Form –Pitfalls in Relational Database Design, Properties of Relational Decomposition, Dependency Preserving Property, Lossless Non-Additive Join Property, Testing Relational Decompositions for non-additive and dependency preserving properties.	<b>9</b>
<b>IV</b>	<b>Introduction to Transaction and Query Processing</b>	Transaction and System Concepts-Desirable properties of Transactions-Schedules and Recoverability-Serializability of Schedules -Concurrency Control–Data Storage Indexing and Query processing and Optimization  MySQL case study: The basic structure of the MySQL system database structure and its manipulation in MySQL -storage organization in MySQL -Programming in PL/SQL-Cursor in PL/SQL	<b>9</b>
<b>TOTAL</b>			<b>36</b>

<b>Database Management Systems Lab Syllabus</b>
---

**Detailed Syllabus:**

**Total Lab Hours for the semester = 30 (2 hours per week)**

**Minimum 10 Laboratory experiments based on the following-**

1. Programs to understand the functionality and limitations of file system.
2. Consider the following relational schema  
Employee (Emp\_no, Name, Salary, design, dept\_id, DOJ)  
Department (Dept\_id, DName, loc, DOE)
  - a. Display the name of the employees working in marketing dept.
  - b. Display the details of the employee joined in the month of July.
  - c. Display the details of the employee who gets maximum salary.
  - d. Count the no of employees in each department
3. Consider the following relational schema  
Student (Rollno, Name, Address, DOB, C\_id)  
Course ( C\_id, Cname, Dur, Fees)
  - a. Display rollno,name,cname,fees of each student
  - b. Count the no of students in each course
4. Consider the following relational schema  
Books(book\_id,b\_name,author,purchase\_date,cost)  
Members(member\_id,m\_name,address,phone,birthdate)  
Issue\_return(book\_id,member\_id,issue\_date,return\_date)
  - a. Find the author of the books that have not been issued.
  - b. Display the member\_id and no of books issued to that (Assume that if a book in Issue\_Return relation does not have a return\_date then it is issued)
  - c. Find the book that has been issued the minimum no of times.
  - d. Display the names and author of the books that have been issued at any time to a member whose name begins with "Ra".

- e. Display the name and Cost of those books that have been issued to any member whose date of birth is less than 01-01-1989 but not been issued to any member having the birth date equal to or greater than 01-01-1989.
5. Consider the following relational schema  
 Student(name,phone,dob,s\_id)  
 Course(c\_id,cname,credit,teacher\_id)  
 Result(s\_id,c\_id,mark)
- Find the name of the students whose results are not declared in any course
  - Find the teachers who are teaching more than one course
  - Display the name and marks of those students who were born before 1-1-1989 and score more than 80 marks in any course
  - Find the details of students securing pass marks in more than 3 course
  - Find the total no of credits earned by a students whose id is 10.
  - Find name of the students who got maximum overall marks.
  - Display the name and marks of those students who scored more than 80 marks in any subject.
  - Find the details of the students securing less than 30 marks in more than 3 subjects.
6. Consider the following relational schema  
 Customer( C\_id, Name , Address )  
 Item(i\_code , Name , Price )  
 Purchase (P\_id ,C\_id , I\_code, qty , pdate )
- Find the name of the customer who has done maximum purchase.
  - Display the name of the item that has been purchased maximum no of times in the month of Feb.
  - Display the name of the customer who didn't purchase any item.
7. Create three triggers (insert, delete and update) on emp table so that:
- Whenever a new record is inserted then the emp\_id and date of insertion is stored in another table called new\_rec.
  - Whenever a record is deleted the emp\_id and date of deletion is stored in another table called old\_rec.
  - Whenever employee's salary is updated the emp\_id , old salary and updated salary is stored in another table called update\_info.
8. Write a procedure to accept a emp\_id and display the employee details.
9. Write a procedure to accept a emp\_id and return the employee salary.
10. Given,  
 Emp(emp\_no,name,salary,supervisor\_no,dept\_code)  
 Dept(dept\_code, dept\_name)
- employees who get more salary than their supervisor
  - Department name and total number of employees in each Department.
  - Name and department of employee(s) who earn maximum salary.
11. Programs on Views and Cursors

<b>Paper III/Subject Name: Formal Language and Automata Theory</b>	<b>Subject Code: ARI022C403</b>
<b>L-T-P-C – 3-1-0-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to impart knowledge on regular grammars, regular expressions and to teach about the basics of parsing and ambiguity.

**Prerequisites:** Fundamentals of Set Theory

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>List and understand</b> the utility and importance of Automata Theory as the basis of all computer science languages design	<b>BT 1 &amp; 2</b>
<b>CO 2</b>	<b>Construct</b> minimized sample automata and grammars of context free languages	<b>BT 3</b>
<b>CO3</b>	<b>Analyze</b> the power and limitation of a computer and solve the problems using formal language	<b>BT 4</b>

**Detailed Syllabus:**

<b>Modules</b>	<b>Topics</b>	<b>Course content</b>	<b>Periods</b>
<b>I</b>	<b>Introduction</b>	Basics of Strings and Alphabets, DFA, transition graphs, regular languages, non-deterministic FA, equivalence of DFA and N DFA	<b>15</b>
<b>II</b>	<b>Grammars</b>	Regular grammars, regular expressions, equivalence between regular languages, properties of regular languages, pumping lemma.	<b>18</b>
<b>III</b>	<b>Deterministic and Non-Deterministic PDA</b>	Leftmost and rightmost derivation, parsing and ambiguity, ambiguity in grammar and languages, normal forms. NDPDA, DPDA, context free languages and PDA, comparison of deterministic and non-deterministic versions, closure properties, pumping lemma for CFL	<b>18</b>
<b>IV</b>	<b>Turing Machine</b>	Turing Machines, variations, halting problem, PCP Chomsky Hierarchy Manipulators, different examples of manipulators; Pointer types- uses; Dynamic memory allocation techniques - garbage collection, Linked list, generic pointers; Files- Open, Close, Read and Write; File attributes, File management	<b>15</b>

<b>Paper IV/Subject Name: Mathematical Foundations of AI</b>	<b>Subject Code: ARI022C405</b>
<b>L-T-P-C – 3-0-0-3</b>	<b>Credit Units: 03</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to develop a strong mathematical foundation for understanding AI and Machine Learning concepts.

**Prerequisites:** Basic knowledge of Linear Algebra, Probability, and Calculus

**Course Outcomes**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Define</b> the basic mathematical foundations needed for dealing with AI systems	<b>BT 2</b>
CO 2	<b>Understand</b> probability and statistics to model uncertainty in AI systems.	<b>BT 3</b>
CO 3	<b>Apply</b> linear algebra concepts to AI applications like dimensionality reduction and embeddings.	<b>BT 3</b>
CO 4	<b>Apply</b> graph theory for solving AI-related problems such as network analysis and search algorithms.	<b>BT 3</b>

### Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I	<b>Linear Algebra for AI</b>	Vector Spaces and Matrices: Basis, Span, Rank, Null Space, Orthogonality Matrix Operations: Transpose, Inverse, Determinants, Eigenvalues & Eigenvectors, Singular Value Decomposition (SVD) and Principal Component Analysis (PCA) Norms, Projections, and Distance Metrics Applications in AI: Feature transformation, Dimensionality Reduction, Word Embeddings	15
II	<b>Probability and Statistics for AI</b>	Probability Theory: Random Variables, Probability Distributions (Bernoulli, Binomial, Gaussian), Bayesian Inference: Bayes Theorem, Maximum Likelihood Estimation (MLE), Maximum A Posteriori (MAP) Expectation, Variance, Covariance, and Correlation, Markov Chains and Hidden Markov Models (HMM) Applications in AI: Naïve Bayes Classifier, Probabilistic Graphical Models, Decision Trees	18
III	<b>Optimization Techniques</b>	Convex Optimization: Gradient Descent, Stochastic Gradient Descent (SGD), Newton's Method, Lagrange Multipliers and Constrained Optimization, Linear and Quadratic Programming Backpropagation and Optimization in Neural Networks Applications in AI: Training Machine Learning Models, Regularization Techniques	18
IV	<b>Graph Theory and Advanced Topics</b>	Graph Basics: Graph Representation, Adjacency Matrices, Graph Traversal (BFS, DFS) Shortest Path Algorithms: Dijkstra's Algorithm, Bellman-Ford Algorithm Spectral Graph Theory and Laplacian Matrices Game Theory and Decision Making in AI Applications in AI: Social Network Analysis, Knowledge Graphs, Graph Neural Networks	15
<b>TOTAL</b>			<b>66</b>

<b>Paper VI/Subject Name: Fundamentals of Web Design</b>	<b>Subject Code: ARI022G306</b>
<b>L-T-P-C – 3-0-0-3</b>	<b>Credit Units: 03</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to enable the students to build a robust foundation for computational thinking and make them learn client-side web development.

**Prerequisites:** None

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Define</b> basic building and design blocks of an website.	<b>BT 1</b>
<b>CO 2</b>	<b>Understand</b> the basic characteristics and concepts of web development.	<b>BT 2</b>
<b>CO 3</b>	<b>Build</b> static web pages and manipulate data using JavaScript and work with the HTML Canvas	<b>BT 3</b>
<b>CO 4</b>	<b>Analyse</b> and <b>evaluate</b> websites in terms of its design and basic processing at the client side.	<b>BT 4 &amp; 5</b>

**Detailed Syllabus:**

<b>Modu les</b>	<b>Topics</b>	<b>Course content</b>	<b>Periods</b>
<b>I</b>	<b>Introduction to Web and creating website</b>	The Internet: Client & Server, IP address and URL, The World Wide Web (WWW), Installing Visual Studio Code, Installing the Prettier VSCode extension, Install Ubuntu in Windows, using WSL, Install Ubuntu using virtual machine software, making and hosting website. Introduction to HTML tags, Looking inside websites using "Inspect Element"	<b>15</b>
<b>II</b>	<b>Styling and Working with Strings</b>	Working with modern HTML and CSS to produce an attractive, informative multi-page website based on the client's requirements, Creating a multipage website using HTML5, Control the look of a website using CSS, Formating a web page to display complex information, Adding graphical elements and maps to a website, Implement web forms to capture user input, Testing a website for compliance with standards and to ensure that it works with a range of browsers, Implementation of CSS using Bootstrap, Styling and Working with Strings: Introduction to strings, Joining strings together, Switching to the VSCode editor: Putting HTML and JS together, Adding comments to HTML and JS, Find the length of a string, Search for a string inside another string, String equality comparison, Sort a collection of strings, Split strings by a pattern,	<b>18</b>
<b>III</b>	<b>Functions</b>	Numbers, Booleans, Objects and Arrays, Number Data Type, Numbers Boolean Data Type, Boolean - comparisons and logical operations, Object Literals - create, read & update + nesting objects, Arrays - handling ordered values, Functions: Explicitly return a	<b>15</b>

		value from a function, Passing a function as an argument , introduction to Firebase.	
<b>IV</b>	<b>Advanced Techniques of Javascript</b>	Iterating over Arrays: Iterating over an array using the for Each method, Generate an HTML list from an array, Using the index of the array value during iteration, Nested Array iteration, Transforming Arrays, Generate an HTML list from an array using the map function, Using index of array value with map, Transforming Nested Arrays, Filtering Arrays: Filter an array based on some criteria, A minimal UI for filtering flight search results, Use the index of the array value with filter, Building a game with Canvas,HTML canvas element, introduction to AJAX, JSON, RESTful API.	<b>18</b>

## 6.6 Detailed Syllabus of 5<sup>th</sup> Semester

<b>Paper I/Subject Name: Operating Systems</b>	<b>Subject Code: ARI022C501</b>
<b>L-T-P-C – 3-0-2-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

### Objective:

The objectives of the course are to make the students understand the fundamental concepts and design of operating systems, apply principles of concurrency, synchronization, and deadlock in operating systems.

**Prerequisites:** Computer Programming, Computer Architecture & Organization

### Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Describe</b> and <b>illustrate</b> the role and responsibilities of an operating system, system calls, kernel vs. user mode, etc.	<b>BT 1 &amp; 2</b>
CO 2	<b>Apply</b> process scheduling algorithms (FCFS, SJF, RR, etc.) to compute performance metrics.	<b>BT 3</b>
CO 3	<b>Analyze</b> synchronization problems and solutions like semaphores, monitors, and deadlock.	<b>BT 4</b>
CO 4	<b>Evaluate</b> different memory management strategies and their impact on performance.	<b>BT 5</b>

### Detailed Syllabus:

Modules	Topics	Course content	Periods
I	<b>Operating Systems Overview</b>	Introduction and history of Operating systems, structure and operations; processes and files. <b>Computer System Overview</b> - Basic Elements, Instruction Execution, Interrupts Memory Hierarchy, Cache Memory, Direct Memory Access, Multiprocessor and Multicore Organization. <b>Operating system overview</b> -objectives and functions, Evolution of Operating System.- Computer System Organization- Operating System Structure and Operations-System Calls, System Programs, OS Generation and System Boot	<b>15</b>
II	<b>Process Management And Concurrency Control</b>	<b>Processes</b> -Process Concept, Process Scheduling, Operations on Processes, Interprocess Communication; Threads-Overview, Multicore Programming, Multithreading Models; Thread and SMP Management. <b>Process Synchronization</b> – Critical Section Problem, Mutex Locks, Semaphores, Monitors; CPU Scheduling and scheduling algorithms.	<b>18</b>

		<b>Deadlocks-</b> Shared resources, resource allocation and scheduling, resource graph models, deadlock detection, deadlock avoidance, deadlock prevention algorithms	
<b>III</b>	<b>Storage Management</b>	Memory Management requirements, Memory partitioning: Fixed and Variable Partitioning, Memory Allocation: Allocation Strategies (First Fit, Best Fit, and Worst Fit), Fragmentation, Swapping, and Paging. Segmentation, Demand paging, Virtual Memory: Concepts, management of VM, Page Replacement Policies (FIFO, LRU, Optimal, Other Strategies), Thrashing. 32 and 64 bit architecture Examples; Allocating Kernel Memory, OS Examples	<b>18</b>
<b>IV</b>	<b>I/O and File Systems</b>	I/O Devices, Organization of I/O functions, Operating System Design issues, I/O Buffering, Overview of mass storage structure- disks and tapes. Disk structure – accessing disks, Swap Space. Disk Scheduling (FCFS, SCAN, C-SCAN, SSTF), RAID, Disk Cache. Disk Protection– Goals, Principles, Domain. <b>File System Interface:</b> File Concepts – Attributes – operations – types – structure – access methods. File system mounting. Protection. File system implementation. Directory implementation – allocation methods. Free space Management.	<b>15</b>
<b>TOTAL</b>			<b>66</b>

### Operating Systems Lab Syllabus

#### Detailed Syllabus:

**Total Lab Hours for the semester = 30 (2 hours per week)**

#### Minimum 20 Laboratory experiments based on the following-

1. Basic Linux Commands and Overview.
2. Write Shell Script for followings
  - To find the global complete path for any file.
  - To broadcast a message to a specified user or a group of users logged on any terminal.
  - To copy the file system from two directories to a new directory in such a way that only the latest file is copied in case there are common files in both the directories.
  - To compare identically named files in two different directories and if they are same, copy one of them in a third directory
  - To delete zero sized files from a given directory (and all its sub- directories).
  - To display the name of those files (in the given directory) which are having multiple links.
  - To display the name of all executable files in the given directory.
  - Write a script to display the date, time and a welcome message (like Good Morning etc.). The time should be displayed with “a.m.” or “p.m.” and not in 24 hours notation.
  - Write a script to display the directory in the descending order of the size of each file.
3. Implementation of System Calls.
4. Implementation of FCFS (First Come First Serve) CPU Scheduling.
5. Implementation of SJF (Shortest Job First) CPU Scheduling.
6. Implementation of Round Robin (RR) CPU Scheduling.
7. Implementation of Priority CPU Scheduling Algorithm.
8. Implementation of FIFO Replacement Algorithm.

9. Implementation of Optimal Page Replacement Algorithm.
10. Implementation of LRU Page Replacement Algorithm by Stack method
11. Implement the producer-consumer problem using threads.

<b>Paper II/Subject Name: Data Communication</b>	<b>Subject Code: ARI022C504</b>
<b>L-T-P-C – 3-0-0-3</b>	<b>Credit Units: 03</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to teach about the fundamental principles and models of data communication, apply knowledge of modulation, multiplexing, and switching techniques, etc.

**Prerequisites:** Concepts of Computer Fundamentals, Digital Logic and Design.

**Course Outcomes**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Describe</b> and <b>explain</b> the basic components and types of data communication systems and data transmission concepts.	<b>BT 1 &amp; 2</b>
CO 2	<b>Apply</b> error detection and correction techniques such as CRC and Hamming code.	<b>BT 3</b>
CO 3	<b>Analyze</b> data link layer protocols such as HDLC, Stop-and-Wait, and Sliding Window	<b>BT 4</b>
CO 4	<b>Evaluate</b> performance issues in flow control, multiplexing, and switching techniques.	<b>BT 5</b>

**Detailed Syllabus:**

Modules	Topics	Course Contents	Hours
---------	--------	-----------------	-------

<b>I</b>	<b>Introduction</b>	Introduction to Computer network, Networks: classification and components, Layered architecture of a network software, OSI and TCP/IP model. Data Transmission: Communication model- Simplex, half duplex and full duplex transmission - Periodic Analog signals: Sine wave, phase, wavelength, time and frequency domain, bandwidth – Digital Signals; Digital data Transmission:- Analog & Digital data, Analog & Digital signals, Analog & Digital transmission – Transmission Impairments: Attenuation, Delay distortion, Noise – Channel capacity:	<b>18</b>
<b>II</b>	<b>Signal Analysis</b>	Introduction to Signal and its Classification. System and its Basic Properties, Spectral Analysis of a Signal; Signal Bandwidth. Transmission media - Guided Transmission Media: Twisted pair, Coaxial cable, optical fiber, Wireless Transmission, Terrestrial microwave, Satellite microwave. Wireless Propagation: Ground wave propagation, Sky Wave propagation, LoS Propagation.	<b>15</b>
<b>III</b>	<b>Data Encoding and Multiplexing</b>	Baseband Communication: Data Encoding and Modulation, Analog Modulation: AM, FM and PM, Pulse Modulation System: PAM and PWM. Digital Modulation: ASK, FSK, PSK and QAM Multiplexing and its Application: Frequency Division Multiplexing, Wavelength Division Multiplexing, Time Division Multiplexing, Spread Spectrum.	<b>15</b>
<b>IV</b>	<b>Switching and Information Theory and Coding</b>	Switching: Switching and its Application, Circuit Switching and Packet Switching, Datagram Switching and Virtual Circuit Switching X.25, Frame Relay and ATM. Introduction to Information Theory and Average Information Source Coding: Huffman Coding, Error Detection and Correction Codes, Hamming Distance, Linear Block Coding, Cyclic Codes, CRC, Convolution Codes	<b>18</b>
<b>TOTAL</b>			<b>66</b>

<b>Credit Distribution</b>		
<b>Lecture/ Tutorial</b>	<b>Practicum</b>	<b>Experiential Learning</b>

Paper III/Subject Name: Design and Analysis of Algorithms

Subject Code: ARI022C503

L-T-P-C – 3-0-0-3

Credit Units: 03

Scheme of Evaluation: T

**Objective:**

The objectives of the course are to enable the students analyze performance of algorithms and solve problems using algorithm design methods such as the greedy method, divide and conquer, dynamic programming, backtracking and branch and bound.

**Prerequisites:** Concepts of Data Structures and Basic Mathematics

**Course Outcomes**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Examine and understand the performance of algorithm.	BT 1 & 2
CO 2	Apply different designing methods for development of algorithms to realistic problems, such as divide and conquer, greedy and etc.	BT 3
CO 3	Analyze and evaluate algorithms to improve their efficiency.	BT 4 & 5

**Detailed Syllabus:**

Modules	Topics	Course Contents	Hours
I	Introduction and Divide and Conquer	Algorithm, Psuedo code for expressing algorithms, Performance Analysis-Space complexity, Time complexity, Asymptotic Notation- Big oh notation, Omega notation, Theta notation and Little oh notation, Probabilistic analysis, Amortized analysis. Master's Theorem	15
II	Searching and Traversal Techniques	Efficient non - recursive binary tree traversal algorithm, Disjoint set operations, union and find algorithms, Spanning trees, Graph traversals - Breadth first search and Depth first search, AND / OR graphs, game trees, Connected Components, Bi - connected components. Disjoint Sets- disjoint set operations, union and find algorithms, spanning trees, connected components and bi-connected components.	18
III	Types of Problem Solving Techniques	Greedy Method: General method, applications - Job sequencing with dead lines, 0/1 knapsack problem, Minimum cost spanning trees, Single source shortest path problem. Dynamic Programming: General method, applications-Matrix chain multiplication, Optimal binary search trees, 0/1 Knapsack	18

		problem, All pairs shortest path problem, Travelling sales person problem, Reliability design. Backtracking: General method, applications-n-queen problem, sum of subsets problem, graph coloring, Hamiltonian cycles. Branch and Bound: General method, applications - Travelling sales person problem, 0/1 knapsack problem- LC Branch and Bound solution, FIFO Branch and Bound solution	
<b>IV</b>	<b>NP-Hard and NP-Complete Problems</b>	NP-completeness – Polynomial time verification – Theory of reducibility – Circuit satisfiability - NP-completeness proofs – NP-complete problems: Vertex cover, Hamiltonian cycle and Traveling Salesman problems – Approximation Algorithms – Approximation algorithms to vertex-cover and traveling salesman problems.	<b>15</b>
<b>TOTAL</b>			<b>66</b>

<b>Credit Distribution</b>		
<b>Lecture/ Tutorial</b>	<b>Practicum/ Tutorial</b>	<b>Experiential Learning</b>
3* 22 NCH = 66 NCH	-	8 * 3 NCH = 24 NCH (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)

<b>Paper IV/Subject Name: Introduction to AI and ML</b>	<b>Subject Code: ARI022C505</b>
<b>L-T-P-C – 3-0-0-3</b>	<b>Credit Units: 03</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to teach about the foundational concepts and evolution of AI and ML, intelligent agents, search algorithms, and knowledge representation, machine learning types, models, and applications, etc.

**Prerequisites:** Data Structures and Algorithms, Discrete Mathematics, Programming in Python

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms</b>

		Taxonomy Level
CO 1	Describe and explain the basic principles, history, and goals of AI and ML.	BT 1 & 2
CO 2	Apply intelligent agents and implement basic search techniques.	BT 3
CO 3	Analyze supervised and unsupervised ML algorithms and their real-world applications.	BT 4
CO 4	Evaluate and compare model performance using standard metrics.	BT 5

**Detailed Syllabus:**

Modules	Topics	Course Contents	Hours
I	Introduction	What is AI? – Definitions, History, Applications, Components of AI: Perception, Reasoning, Learning, Acting, Agents and Environments, Types of Agents: Simple, Reflex, Goal-based, Utility-based, Problem Solving: Problem formulation, state space, Uninformed Search: BFS, DFS, Uniform Cost Search, Informed Search: Greedy, A*, Heuristics	18
II	Knowledge Representation and Reasoning	Logic in AI: Propositional and Predicate Logic, Forward and Backward Chaining, Rule-Based Systems, Constraint Satisfaction Problems (CSP), Expert Systems and Inference Engines, Applications in NLP, Robotics, and Gaming	15
III	ML Fundamentals	What is Machine Learning? – ML vs AI, Types of ML: Supervised, Unsupervised, Reinforcement (intro only), Data preprocessing and visualization, Linear Regression, Logistic Regression, Decision Trees, Naïve Bayes, K-Nearest Neighbors (k-NN), Support Vector Machines (SVM), Clustering: K-Means, Hierarchical	15
IV	Evaluation, Tools, Case Studies	Model evaluation: Confusion matrix, accuracy, precision, recall, F1-score, Overfitting, Underfitting, Cross-validation, Introduction to tools: scikit-learn, pandas, NumPy, Use cases: spam detection, image classification, recommendation systems, Ethics in AI: bias, fairness, transparency, Recent trends in AI & ML: Generative AI, Explainable AI (XAI)	18
<b>TOTAL</b>			<b>66</b>

<b>Paper V/Subject Name: Principles of Management and Organizational Behavior</b>	<b>Subject Code: BSA022C505</b>
<b>L-T-P-C - 3-0-0-3</b>	<b>Credit Units: 03</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to make the students understand about the principles of management and their application to the functioning of an organization.

**Prerequisites:** None

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Understand</b> the managerial functions like planning, and have same basic knowledge on international aspect of management	<b>BT 2</b>
<b>CO 2</b>	<b>Build</b> the ability to direct, leadership and communicate effectively	<b>BT 3</b>
<b>CO3</b>	<b>Analyze</b> the behavior of individuals and groups in organizations in terms of the key factors that influence organizational behavior.	<b>BT 4</b>
<b>CO 4</b>	<b>Assess</b> the potential effects of organizational-level factors (such as structure, culture and change) on organizational behavior	<b>BT 5</b>

**Detailed Syllabus:**

<b>Modules</b>	<b>Topics</b>	<b>Course content</b>	<b>Periods</b>
<b>I</b>	<b>Introduction To Management and Organizations</b>	Definition of Management – Science or Art, Manager vs. Entrepreneur, types of managers, managerial roles and skills. Evolution of Management-Scientific, human relations, system and contingency approaches, Types of Business organization, Sole proprietorship, partnership, company public and private sector enterprises, Organization culture and Environment, Current trends and issues in Management.	<b>18</b>
<b>II</b>	<b>Planning and Decision Making</b>	Nature and purpose of planning, planning process, types of planning, objectives, setting objectives, policies. Planning	<b>15</b>

		premises, Strategic Management, Planning Tools and Techniques, Decision making steps and process.	
<b>III</b>	<b>Organization and Human Resource Management</b>	Organizing- Nature and purpose, Formal and informal organization, organization chart, organization structure, types, Line and staff authority, departmentalization, delegation of authority, centralization and decentralization, Job Design. Human Resource Management- HR Planning, Recruitment, selection, Training and Development, Performance Management, Career planning and management.	<b>15</b>
<b>IV</b>	<b>Direction and Control</b>	Directing-Foundations of individual and group behavior, motivation, motivation theories, motivational techniques, job satisfaction, job enrichment. Leadership- types and theories of leadership, communication, process of communication, barrier in communication, effective Communication, Communication and IT. Controlling-System and process of controlling, budgetary and non-budgetary control techniques, use of computers and IT in Management control, Productivity problems and management, control and performance, direct and preventive control, reporting.	<b>18</b>

## 6.7 Detailed Syllabus of 6<sup>th</sup> Semester

<b>Paper I/Subject Name: Computer Networks</b>	<b>Subject Code: ARI022C601</b>
<b>L-T-P-C – 3-0-2-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

### Objective:

The objectives of the course are to make the students understand the fundamental concepts and reference models of computer networks, apply error detection, flow control, and congestion control techniques in network protocols, etc.

**Prerequisites:** Concepts of Data Communication

### Course Outcomes

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Describe</b> and <b>explain</b> the layered architecture of computer networks and functions of each layer.	<b>BT 1 &amp; 2</b>
<b>CO 2</b>	<b>Apply</b> subnetting, IP addressing, and routing algorithms in network design.	<b>BT 3</b>
<b>CO 3</b>	<b>Analyze</b> the operation of error control, flow control, and congestion control mechanisms.	<b>BT 4</b>
<b>CO 4</b>	<b>Evaluate</b> performance and reliability of network protocols and simulate them using tools.	<b>BT 5</b>

### Detailed Syllabus:

<b>Modules</b>	<b>Topics</b>	<b>Course content</b>	<b>Periods</b>
<b>I</b>	<b>Data Link Layer and Medium Access Sub-layer</b>	Design issues, Framing, Error detection and correction codes: checksum, CRC, hamming code, Data link protocols for noisy and noiseless channels, Sliding Window Protocols: Stop & Wait ARQ, Go-back-N ARQ, Selective repeat ARQ, Data link protocols: HDLC and PPP Static and dynamic channel allocation, Random Access: ALOHA, CSMA protocols, Controlled Access: Polling, Token Passing, IEEE 802.3 frame format, Ethernet cabling, Manchester encoding, collision detection in 802.3, Binary exponential back off algorithm	<b>15</b>
<b>II</b>	<b>Network Layer</b>	Design issues, IPv4 classful and classless addressing, subnetting, Routing algorithms: distance vector and link state routing, Congestion control: Principles of Congestion	<b>18</b>

		Control, Congestion prevention policies, Leaky bucket and token bucket algorithms	
<b>III</b>	<b>Transport Layer</b>	Elements of transport protocols: addressing, connection establishment and release, flow control and buffering, multiplexing and de-multiplexing, crash recovery, introduction to TCP/UDP protocols and their comparison	<b>18</b>
<b>IV</b>	<b>Application Layer</b>	World Wide Web (WWW), Domain Name System (DNS), E-mail, File Transfer Protocol (FTP), SMTP, HTTP, Introduction to Network security	<b>15</b>
<b>TOTAL</b>			<b>66</b>

<b>Computer Networks Lab Syllabus</b>
---------------------------------------

**Detailed Syllabus:**

**Total Lab Hours for the semester = 30 (2 hours per week)**

**Minimum 20 Laboratory experiments based on the following-**

1. To study various topologies for establishing computer networks.
2. To learn the usage of various basic tools (crimping, krone etc.) used in establishing a LAN.
3. To familiarize with switch and hub used in networks.
4. To learn the usage of connectors and cables (cabling standards) used in networks
5. To make certain copper and fiber patch cords using different standards.
6. To familiarize with routers & bridges
7. Use commands like ping, ipconfig for trouble shooting network related problems.
8. NIC Installation & Configuration (Windows/Linux)
9. TCP/UDP Socket Programming
10. Multicast & Broadcast Sockets
11. Develop a program to compute the Hamming Distance between any two code words.
12. Develop a program to compute checksum for an 'm' bit frame using a generator polynomial.
13. IPC (Message queue)
14. Implementation of a Prototype Multithreaded Server
  - a. Implementation of o Data Link Layer Flow Control Mechanism (Stop & Wait, Sliding Window)
  - b. Data Link Layer Error Detection Mechanism (Cyclic Redundancy Check)
  - c. Data Link Layer Error Control Mechanism (Selective Repeat, Go Back N)

<b>Credit Distribution</b>		
<b>Lecture/ Tutorial</b>	<b>Practicum</b>	<b>Experiential Learning</b>
3* 22 NCH = 66 NCH	1 * 15 NCH = 30 NCH	8 * 3 NCH = 24 NCH (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)

**Text Books:**

1. *Data and Computer Communication*, William Stallings, 10<sup>th</sup> Edition, 2013, PHI.
2. *Data Communications and Networking*, Behrouz A Forouzan, 4<sup>th</sup> Edition, 2017, Tata McGraw Hill
3. *Computer Networks*, Tannenbaum, 3<sup>rd</sup> Edition, 1996, Pearson Education.

**Reference Books:**

1. L.L. Peterson & B.S. Davie, *Computer Networks: A Systems Approach*, 5<sup>th</sup> Edition, 2011, Morgan Kaufmann

<b>Paper II/Subject Name: Introduction to Deep Learning</b>	<b>Subject Code: ARI022C604</b>
<b>L-T-P-C – 3-0-2-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

### Objective

The objectives of the course are to provide the basic concept of neural networks and deep learning architectures, forward and backward propagation, loss functions, and optimization, evaluate CNNs, RNNs, and advanced deep learning models etc.

**Prerequisites:** Linear Algebra and Calculus, Probability and Statistics, Programming in Python, Basics of Machine Learning

### Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Explain</b> the architecture and learning process of neural networks.	<b>BT 1 &amp; 2</b>
CO 2	<b>Apply</b> deep learning models using backpropagation and optimization techniques.	<b>BT 3</b>
CO 3	<b>Analyze</b> convolutional and recurrent neural networks.	<b>BT 4</b>
CO 4	<b>Assess</b> the performance of deep learning models on various datasets.	<b>BT 5</b>

### Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I	<b>Introduction</b>	Introduction to deep learning and applications, Perceptron model and limitations, Feedforward Neural Networks (FNN), Activation functions: ReLU, Sigmoid, Tanh, Softmax, Loss functions: MSE, Cross-Entropy, Forward and Backward Propagation, Gradient Descent and variants (SGD, Adam, RMSprop)	<b>15</b>
II	<b>Deep Neural Networks and Regularization</b>	Deep Feedforward Networks and Vanishing Gradients, Batch normalization and Dropout, Weight initialization techniques, Hyperparameter tuning: learning rate, batch size, epochs, Model evaluation: accuracy, precision, recall, F1, confusion matrix, Overfitting and underfitting	<b>18</b>
III	<b>CNNs and RNNs</b>	Convolutional Neural Networks (CNN): Convolution, pooling, padding, Architecture: LeNet, AlexNet, VGG,	<b>18</b>

		ResNet, Applications in image classification and object detection Recurrent Neural Networks (RNN): Basics, vanishing gradients, LSTM and GRU, Applications in time-series and NLP	
<b>IV</b>	<b>Advanced Topics</b>	Transfer learning and pretrained models (e.g., VGG, ResNet, BERT), Generative Adversarial Networks (GANs): Architecture, training challenges, Attention mechanism and Transformers (introductory level), Applications in computer vision, NLP, speech, healthcare, Model deployment using Flask/TensorFlow Lite, Ethical issues in deep learning (bias, fairness, explainability)	<b>15</b>
<b>TOTAL</b>			<b>66</b>

**Introduction to Deep learning Lab Syllabus**

**Detailed Syllabus:**

**Total Lab Hours for the semester = 30 (2 hours per week)**

**Minimum 10 Laboratory experiments based on the following-**

1. Introduction to NumPy, Pandas, and Matplotlib: Basics of Python for deep learning, Loading and preprocessing data
2. Implement a Perceptron and Feedforward Neural Network: Manual implementation using NumPy, XOR classification using MLP
3. Build an ANN using Keras or PyTorch, MNIST digit classification, Visualize loss and accuracy curves
4. Experiment with Different Activation and Loss Functions, Use ReLU, Sigmoid, Softmax, Compare MSE vs CrossEntropy
5. Optimization Techniques and Regularization, SGD, Adam optimizers, Dropout and Batch Normalization
6. Convolutional Neural Networks (CNNs), Build a CNN for CIFAR-10 or Fashion MNIST, Visualize feature maps
7. Transfer Learning with Pretrained Models, Use VGG16 or ResNet for classification, Fine-tune the final layers
8. Recurrent Neural Networks (RNNs): Character-level text generation, Basic RNN vs LSTM comparison
9. LSTM for Sentiment Analysis, IMDB or Twitter sentiment dataset, Embedding and sequence padding
10. Hyperparameter Tuning, Grid search or random search, Effect of learning rate and batch size
11. Evaluate Model Performance, Confusion matrix, precision, recall, F1-score, ROC-AUC curve
12. Mini Project: Students select a dataset and apply end-to-end deep learning, Example: plant disease detection, emotion recognition, etc.

<b>Credit Distribution</b>		
<b>Lecture/ Tutorial</b>	<b>Practicum</b>	<b>Experiential Learning</b>
3* 22 NCH = 66 NCH	1 * 15 NCH = 30 NCH	8 * 3 NCH = 24 NCH (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)

<b>Paper III/Subject Name: Software Engineering</b>	<b>Subject Code: ARI022C603</b>
<b>L-T-P-C – 3-0-0-3</b>	<b>Credit Units: 03</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to explain the fundamentals of software engineering principles and practices, including project management, configurations management, requirements definition, system analysis, design, testing, and deployment.

**Prerequisites:** None

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Describe</b> and <b>demonstrate</b> the fundamental concepts of software engineering, software process models, and development life cycles.	<b>BT 1 &amp; 2</b>
<b>CO 2</b>	<b>Identify</b> software requirements and develop software specifications using functional and non-functional requirements.	<b>BT 3</b>
<b>CO 3</b>	<b>Analyze</b> risk factors, cost estimation, and scheduling using various estimation and modeling techniques.	<b>BT 4</b>
<b>CO 4</b>	<b>Evaluate</b> and select appropriate software testing strategies, maintenance models, and quality assurance standards.	<b>BT 5</b>

**Detailed Syllabus:**

<b>Modules</b>	<b>Topics</b>	<b>Course content</b>	<b>Hours</b>
<b>I</b>	<b>Introduction to Process Models and Software Requirement Specification</b>	Importance of Software Project Management, Activities Methodologies, Categorization of Software Projects, Setting objectives, Software life cycle models: Waterfall, prototyping, Evolutionary, Spiral models and Agile Model. Software Requirements: Functional and non-functional requirements, user requirements, system requirements, interface specification, the software requirements document. Requirements engineering process: Feasibility studies, requirements elicitation and analysis, requirements validation, requirements management.	<b>18</b>
<b>II</b>	<b>Software Process Management, Activity Planning</b>	Project planning and control, Effort and Cost estimation techniques-LOC, Function Point, COCOMO, project scheduling using PERT and GANTT charts, Critical path (CRM) method, cost-time relations: Rayleigh-Norden	<b>15</b>

	<b>and Agile Development</b>	results, Staffing Pattern, Software configuration management, Introduction to Agility- Agile methods – Extreme Programming – SCRUM – Managing interactive processes.	
<b>III</b>	<b>Software Design and Risk Estimation</b>	Basics of Software Design, Procedural Design Methodology, Modularity, Cohesion, Coupling, DFD and Structure Chart, Object-Oriented concepts, Introduction to UML: Class and interaction Diagrams, Object-Oriented Analysis and Design, Object-oriented Software Modelling. Risk Management-Risk Identification, Risk Assessment, Risk Containment	<b>15</b>
<b>IV</b>	<b>Software Testing, Maintenance and Reuse</b>	Software testing fundamentals-Internal and external views of Testing-white box testing – basis path testing-control structure testing-black box testing-Regression Testing – Unit Testing – Integration Testing – Validation Testing – System Testing And Debugging –Software Implementation Techniques: Coding practices-Refactoring-Maintenance and Reengineering-BPR model-Reengineering process model-Reverse and Forward Engineering. Characteristics of Software Maintenance, Software Reverse Engineering, Software Maintenance Process Models, Estimation of maintenance cost, Software Reuse.	<b>18</b>

<b>Paper IV/Subject Name: Advanced Deep Learning (PEC-I)</b>	<b>Subject Code: ARI022D607</b>
<b>L-T-P-C – 4-0-0-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to teach the concept advanced neural network architectures and deep generative models, attention, transformers, and large-scale pretraining, application of deep learning in specialized domains like vision, language, and multimodal systems, etc.

**Prerequisites:** AI/ML Fundamentals

**Course Outcomes**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Describe</b> and <b>demonstrate</b> generative models like GANs and VAEs.	<b>BT 1 &amp; 2</b>
CO 2	<b>Utilize</b> advanced architectures like ResNet, DenseNet, and Inception.	<b>BT 3</b>
CO 3	<b>Analyze</b> and present recent advances and research trends in deep learning.	<b>BT 4</b>
CO 4	<b>Evaluate</b> and optimize models for interpretability, robustness, and deployment	<b>BT 5</b>

**Detailed Syllabus:**

Modules	Topics	Course Contents	Hours
I	<b>Advanced NN Architectures</b>	Deep CNN Architectures: ResNet, DenseNet, InceptionNet, MobileNet, EfficientNet for edge AI, Network engineering: skip connections, depthwise convolutions, residual learning, Neural architecture search (NAS) – basics, Attention Mechanisms (intro) in CNNs	22
II	<b>Generative Models</b>	Autoencoders and Variational Autoencoders (VAEs), Generative Adversarial Networks (GANs): Vanilla GAN, DCGAN, CycleGAN, Training challenges: mode collapse, stability, Self-supervised learning basics, Contrastive learning and SimCLR	22
III	<b>Transformers</b>	Sequence modeling limitations of RNNs, Attention Mechanism and Self-Attention, Transformers: Encoder, Decoder, Positional Encoding, BERT, GPT, and their variants, Transfer learning and fine-tuning in NLP & vision (e.g., ViT), Vision-Language models: CLIP, BLIP (overview)	22
IV	<b>Deployment and Interpretability</b>	Model interpretability: SHAP, LIME, Grad-CAM, Adversarial attacks and defenses, Fairness, bias, and ethics in deep learning, Model compression: pruning, quantization, distillation, Real-time deployment using TensorFlow Lite, ONNX, Trends: diffusion models, foundation models, multimodal AI	22
<b>TOTAL</b>			<b>88</b>

Credit Distribution		
Lecture/ Tutorial	Practicum	Experiential Learning
4* 22 NCH = 88 NCH	--	8 * 4 NCH = 32 NCH (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)

**Text Books:**

<b>Paper V/Subject Name: Natural Language Processing (PEC-II)</b>	<b>Subject Code: ARI022D608</b>
<b>L-T-P-C – 4-0-0-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to provide the student with knowledge of various levels of analysis, language modelling involved in NLP.

**Prerequisites:** Concepts of Automata Theory

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Demonstrate</b> the fundamental concepts of Natural Language Processing.	<b>BT 2</b>
<b>CO 2</b>	<b>Solve</b> the NLP tasks using various categories of algorithms.	<b>BT 3</b>
<b>CO 3</b>	<b>Analyze</b> the algorithms applied	<b>BT 4</b>
<b>CO 4</b>	<b>Evaluate</b> the algorithms applied	<b>BT 5</b>

**Detailed Syllabus:**

<b>Modules</b>	<b>Topics</b>	<b>Course Contents</b>	<b>Hours</b>
<b>I</b>	<b>Overview and Language Modeling</b>	Overview: Origins and challenges of NLP-Language and Grammar-Processing Indian Languages-NLP Applications-Information Retrieval. Language Modeling: Introduction-Variou Grammar-based Language Models-Statistical Language Model	<b>22</b>
<b>II</b>	<b>Word Level, Syntactic and Semantic Analysis</b>	Word Level Analysis: Introduction- Regular Expressions-Finite-State Automata-Morphological Parsing-Spelling Error Detection and correction-Words and Word classes-Part-of Speech Tagging. Syntactic Analysis: Introduction-Context-free Grammar-Constituency Parsing-Probabilistic Parsing Semantic Analysis: Introduction- Meaning Representation-Lexical Semantics Ambiguity-Word Sense Disambiguation. Discourse Processing: Introduction- cohesion-Reference Resolution Discourse Coherence and Structure	<b>22</b>
<b>III</b>	<b>Natural Language Generation and Machine Translation</b>	Natural Language Generation: Introduction-Architecture of NLG Systems Generation Tasks and Representations-Application of NLG.	<b>22</b>

		Machine Translation: Introduction-Problems in Machine Translation Characteristics of Indian Languages- Machine Translation Approaches-Translation involving Indian Languages	
<b>IV</b>	<b>Information Retrieval and Lexical Resources</b>	Information Retrieval: Introduction-Design features of Information Retrieval Systems-Classical, Non-classical, Alternative Models of Information Retrieval - Evaluation  Lexical Resources: Introduction-WordNet-FrameNet-Stemmers-POS Tagger Research Corpora	<b>22</b>

<b>Paper VI/Subject Name: Fundamentals of IOT</b>	<b>Subject Code: ARI022G606</b>
<b>L-T-P-C - 3-0-0-3</b>	<b>Credit Units: 03</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to teach the vision and basic concepts of IoT, make the students understand IoT Market perspective, impart knowledge on Data and Knowledge Management and use of Devices in IoT Technology.

**Prerequisites:** None

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Explain and understand</b> the basic concepts, architecture, and enabling technologies of the Internet of Things.	<b>BT 1 &amp; 2</b>
<b>CO 2</b>	<b>Identify</b> the use of microcontrollers (e.g., Arduino/Raspberry Pi) in designing simple IoT applications.	<b>BT 3</b>

<b>CO 3</b>	<b>Analyze</b> data acquisition and processing techniques in IoT-based systems.	<b>BT 4</b>
<b>CO 4</b>	<b>Assess</b> the performance, security, and scalability of different IoT applications across domains.	<b>BT 5</b>

#### Detailed Syllabus:

<b>Modules</b>	<b>Topics</b>	<b>Course content</b>	<b>Periods</b>
<b>I</b>	<b>Introduction</b>	Definition and Evolution of IoT, IoT Ecosystem: Components and Architecture, Characteristics and Design Principles of IoT, Embedded Systems vs. IoT, IoT Levels: Perception, Network, Middleware, Application, Physical and Logical Design of IoT, IoT Enabling Technologies: Cloud Computing, Big Data, AI, Edge Computing	<b>15</b>
<b>II</b>	<b>IOT Hardware and Sensors</b>	Microcontrollers and Microprocessors (Arduino, Raspberry Pi, ESP32), Digital and Analog Sensors: Working and Interfacing, Actuators and their Types, GPIO, PWM, ADC, I2C, SPI basics, Sensor Data Acquisition and Conditioning, Power Sources and Management for IoT Devices, Interfacing Sensors with Microcontrollers (Hands-on with Arduino or Pi)	<b>18</b>
<b>III</b>	<b>Networking and Communication Protocols</b>	Network Layer & Communication Models, OSI Layer & Role in IoT, Protocols: HTTP, MQTT, CoAP, LoRa, Zigbee, BLE, NFC, IP Addressing in IoT (IPv6, 6LoWPAN), Cloud Integration for IoT Data (ThingSpeak, Blynk, Firebase, AWS IoT), Security Concerns: Encryption, Authentication, Privacy, Hands-on: Sending data to cloud via MQTT/HTTP	<b>18</b>
<b>IV</b>	<b>IOT Applications and Challenges</b>	Domain Applications: Smart Agriculture, Smart Home / Smart Cities, Healthcare IoT, Industrial IoT (IIoT) Case Studies: Google Nest, Amazon Echo, Smart Irrigation Challenges in IoT: Scalability, Interoperability, Security, Ethics Final Project Design and Development, Documentation and Presentation of IoT Prototype	<b>15</b>
<b>Total</b>			<b>66</b>

<b>Credit Distribution</b>		
<b>Lecture/ Tutorial</b>	<b>Practicum</b>	<b>Experiential Learning</b>
3* 22 NCH = 66 NCH	--	8 * 3 NCH = 24 NCH  (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)

## 6.8 Detailed Syllabus of 7<sup>th</sup> Semester

<b>Paper I/Subject Name: Introduction to Artificial Intelligence</b>	<b>Subject Code: ARI022C701</b>
<b>L-T-P-C - 4-0-0-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: T</b>

### Objective:

The objectives of the course are to make the students learn data analytics concepts and visualization techniques, integrate AI/ML methods for extracting insights from structured and unstructured data, learn effective data storytelling and dashboarding for decision-making, etc.

**Prerequisites:** Basics of Python programming, Data Structures and Algorithms, Probability, Statistics, and Linear Algebra, Fundamentals of Machine Learning

### Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Understand</b> the role of data analytics and visualization in AI-based systems.	<b>BT 1 &amp; 2</b>
CO 2	<b>Apply</b> preprocessing, transformation, and dimensionality reduction techniques on real-world data.	<b>BT 3</b>
CO 3	<b>Analyze</b> AI models and visualize their results.	<b>BT 4</b>
CO 4	<b>Evaluate</b> and communicate insights using interactive dashboards and visual tools.	<b>BT 5</b>

### Detailed Syllabus

Modules	Topics	Course Contents	Hours
I	<b>Introduction</b>	Introduction to data analytics in AI, Data types, scales, and distributions, Data wrangling and preprocessing (missing data, outliers, normalization), Exploratory Data Analysis (EDA): histograms, boxplots, scatter plots, Introduction to data visualization principles (Tufte's theory, Gestalt principles), Tools: Python (Matplotlib, Seaborn, Plotly), Tableau/Power BI (overview)	22
II	<b>Dimensionality Reduction and Feature Engineering</b>	Correlation and Covariance matrices, Principal Component Analysis (PCA) and t-SNE, Linear Discriminant Analysis (LDA), Feature selection vs feature extraction, Feature importance visualization in ML models (e.g., SHAP, permutation importance), Case study: reducing dimensionality in image or text datasets	22
III	<b>Machine Learning and Visual Analytics</b>	Supervised learning recap: regression and classification, Unsupervised learning recap: clustering and association rules, Visualizing ML performance: ROC, confusion matrix, lift charts, Interactive visualizations for ML insights (using	22

		Dash, Streamlit), AI explanations: SHAP values, partial dependence plots, decision plots, Real-world AI use cases: fraud detection, healthcare analytics, customer segmentation	
<b>IV</b>	<b>Storytelling, Dashboards and Ethics</b>	Data storytelling concepts: audience, message framing, design, Creating interactive dashboards using Tableau, Power BI, or Dash, Real-time data visualization (live APIs, IoT, log data), Visualizing NLP and time-series data, Ethical visualization: avoiding misrepresentation, bias, overfitting, Capstone mini-project: end-to-end analytics pipeline with visuals	<b>22</b>
<b>TOTAL</b>			<b>88</b>

<b>Credit Distribution</b>		
<b>Lecture/ Tutorial</b>	<b>Practicum</b>	<b>Experiential Learning</b>
4* 22 NCH = 88 NCH	--	8 * 4 NCH = 32 NCH (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)

**Text Book:**

1. *Visualizing Data*, Ben Fry, 1<sup>st</sup> Edition, 2016, O'Reilly
2. *Data Points: Visualization That Means Something*, Nathan Yau, Illustrated Edition, 2013, Wiley
3. *Data Science from Scratch*, Joel Grus, 1<sup>st</sup> Edition, 2015, O'Reilly

<b>Paper II/Subject Name: Web Technology</b>	<b>Subject Code: ARI022C702</b>
<b>L-T-P-C - 3-0-2-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

**Objective:**

The objectives of the course are to provide knowledge on the basic web concepts, scripting languages and Internet protocols.

**Prerequisites:** Concepts of Databases and Object-Oriented Programming

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Describe and understand</b> the basic concept of web development	<b>BT 1 &amp; 2</b>

<b>CO 2</b>	<b>Apply</b> the concepts learnt to develop simple web applications	<b>BT 3</b>
<b>CO 3</b>	<b>Assess</b> two web applications based on various design factors.	<b>BT 4</b>
<b>CO 4</b>	<b>Evaluate</b> the working of various web applications.	<b>BT 5</b>

**Detailed Syllabus:**

<b>Modules</b>	<b>Topics</b>	<b>Course Contents</b>	<b>Hours</b>
<b>I</b>	<b>Introduction, To Web Technology</b>	World Wide Web: Introduction to TCP/IP and WAP, DNS, Email, TelNet, HTTP and FTP. Introduction to Browser and search engines, Working of the search engines, Miscellaneous Web Browser details, Introduction to Web Servers: Features of web servers, caching, case study-IIS, Apache, Configuring web servers. Internet Principles – Basic Web Concepts – Client/Server model – retrieving data from Internet – HTM and Scripting Languages – Standard Generalized Mark –up languages – Next Generation – Internet –Protocols and Applications.	<b>18</b>
<b>II</b>	<b>HTML,CSS, Java Script</b>	Web Pages - types and issues, tiers; comparisons of Microsoft and java technologies, WWW-Basic concepts, web client and web server, http protocol (frame format), universal resource locator (URL), HTML different Tags, sections, image & pictures, listings, tables, frame, frameset, form. The need of dynamic web pages; an overview of DHTML, cascading style sheet (CSS), comparative studies of different technologies of dynamic page creation. Java Script : Data types, variables, operators, conditional statements, array object, date object, string object, Dynamic Positioning and front end validation, creating rollovers, building smarter forms, Event Handling, working with cookies, DOM, node and objects, creating sliding menu, pop-up menu, slideshow with caption	<b>18</b>
<b>III</b>	<b>XML and AJAX</b>	XML – Server side includes – communication – DTD – Vocabularies – DOM methods – Introduction of XML, Validation of XML documents, DTD, Ways to use XML, XML for data files, HTML Vs XML, Embedding XML into HTML documents, Converting XML to HTML for Display, Rewriting HTML as XML, Firewalls- Proxy Servers. AJAX technologies, Action, XML HttpRequest database operations, security, issues	<b>15</b>
<b>IV</b>	<b>J2SE, J2EE, Servlet and JSP</b>	Data Types, Arrays, Type Casting, Classes and Objects, Inheritance, Interfaces, Exception Handling, Multithreading, J2EE as a framework, Client Server Traditional model, Comparison amongst 2-tier, 3-tier and N-tier Architectures, Thin and Thick Clients. J2EE Servlet 2.x Specification, Writing small Servlet Programs, Deployment Descriptor, Inter Servlet Collaboration, Session: Definition, State on web, Different ways to track sessions. JSP Technology Introduction-JSP and Servlets- Running JSP Applications Basic JSP- JavaBeans Classes - Support for the Model- View- Controller Paradigm- Case Study- Related Technologies.	<b>15</b>
<b>TOTAL</b>			<b>66</b>

<b>Web Technology Lab Syllabus</b>
------------------------------------

## Detailed Syllabus:

**Total Lab Hours for the semester = 30 (2 hours per week)**

### Minimum 10 Laboratory experiments based on the following-

1. Web page design: Designing web pages with HTML- use of tags, hyperlinks, URLs, tables, text formatting, graphics & multimedia, imagemap, frames and forms in web pages.
2. Use of Cascading Style Sheet in web pages.
3. Creating interactive and dynamic web pages with JavaScript: JavaScript overview; constants, variables, operators, expressions & statements; user-defined & built-in functions; client-side form validation; using properties and methods of built-in objects.
4. Extensible Markup Language (XML): Introduction- using user-defined tags in web pages; displaying XML contents; XML DTDs; use of XSL.
5. Server-side scripting: overview of CGI, ASP, and JSP.
6. Server side scripting using PHP; PHP basics, HTML form data handling, Web database connectivity- introduction to ODBC; PHP with database connectivity.  
Exposure to Advanced Web Technologies (as far as possible; not to be made compulsory):  
Distributed Object based models- DCOM, CORBA, EJB; Web services and Related Technologies- ISAPI, SOAP, UDDI, WSDL; Other Advanced Web Technologies- AJAX, ISAPI, .NET. Web Security

Credit Distribution		
Lecture/ Tutorial	Practicum	Experiential Learning

**Paper III/Subject Name: Computer Vision (PEC-III)**

**Subject Code: ARI022D701**

**L-T-P-C – 4-0-0-4**

**Credit Units: 04**

**Scheme of Evaluation: T**

### Objective:

The objectives of the course are to make the students understand the fundamentals of digital image processing and vision systems, explore image transformation, filtering, edge detection, and feature extraction techniques, implement machine learning and deep learning approaches for object recognition, etc.

**Prerequisites:** Linear Algebra, Probability & Statistics, Python Programming, Basics of Machine Learning and Deep Learning

### Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Describe</b> and <b>explain</b> core concepts of image formation, transformation, and processing.	<b>BT 1 &amp; 2</b>
CO 2	<b>Apply</b> techniques for image filtering, edge detection, and feature extraction.	<b>BT 3</b>
CO 3	<b>Analyze</b> image classification and object detection pipelines.	<b>BT 4</b>
CO 4	<b>Evaluate</b> and compare vision models using performance metrics.	<b>BT 5</b>

### Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I	<b>Image Processing Fundamentals</b>	Introduction to computer vision and its applications, Image formation, pixel operations, Color spaces: RGB, HSV, Grayscale, Image thresholding, histogram equalization, Smoothing and filtering: Gaussian, median, bilateral, Edge detection: Sobel, Canny, Laplacian, Geometric transformations: translation, scaling, rotation, affine	22
II	<b>Feature Detection and Matching</b>	Interest point detection: Harris, FAST, Local descriptors: SIFT, SURF, ORB, Feature matching using distance metrics, Homography and image stitching, Motion estimation, optical flow basics, Object tracking: Kalman filter, Mean shift, Camshift	22
III	<b>ML and DL in Vision</b>	Classical classification: KNN, SVM for image data, Introduction to CNNs: architecture, layers, filters, Popular CNN models: LeNet, AlexNet, VGG, ResNet, Object detection models: R-CNN, Fast R-CNN, YOLO, SSD, Image segmentation: semantic and instance segmentation (Mask R-CNN)	22
IV	<b>Application, Ethics and Deployment</b>	Applications: facial recognition, OCR, autonomous driving, healthcare, Real-time video analysis and gesture recognition, Vision in robotics and AR/VR, Explainable AI in computer vision (Grad-CAM), Ethical issues: bias, surveillance, privacy, Deploying models using OpenCV, TensorFlow Lite, ONNX	22
<b>TOTAL</b>			<b>88</b>

Credit Distribution		
Lecture/ Tutorial	Practicum	Experiential Learning

4* 22 NCH = 88 NCH	--	8 * 4 NCH = 32 NCH (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)

<b>Paper IV/Subject Name: Reinforcement Learning (PEC-IV)</b>	<b>Subject Code: ARI022D702</b>
<b>L-T-P-C - 4-0-0-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to introduce students to the fundamental concepts and mathematical formulation of reinforcement learning, explore dynamic programming, Monte Carlo, and temporal-difference learning methods, implement RL algorithms and apply them to games and control problems, etc.

**Prerequisites:** Linear Algebra and Probability, Python Programming, Basics of Machine Learning & Neural Networks (for advanced topics)

**Course Outcomes**

<b>On successful completion of the course the students will be able to:</b>		
<b>SI No</b>	<b>Course Outcome</b>	<b>Blooms Taxonomy Level</b>
<b>CO 1</b>	<b>Explain</b> and <b>understand</b> the core concepts of agents, environments, and rewards in reinforcement learning.	<b>BT 1 &amp; 2</b>
<b>CO 2</b>	<b>Apply</b> value-based and policy-based methods to sequential decision-making problems.	<b>BT 3</b>
<b>CO 3</b>	<b>Analyze</b> RL algorithms using Bellman equations and convergence properties.	<b>BT 4</b>
<b>CO 4</b>	<b>Evaluate</b> and implement deep RL algorithms for complex environments.	<b>BT 5</b>

**Detailed Syllabus:**

<b>Modules</b>	<b>Topics</b>	<b>Course Contents</b>	<b>Hours</b>
<b>I</b>	<b>Introduction</b>	Agent-Environment Interaction, Markov Decision Processes (MDP), Rewards, Policies, Returns, Value Functions (State-value, Action-value), Bellman Expectation Equations, Exploration vs Exploitation, Gridworld examples	<b>22</b>
<b>II</b>	<b>Dynamic Programming &amp; TD Learning</b>	Policy Evaluation and Iteration, Value Iteration, Monte Carlo Methods: First-visit, Every-visit, Temporal-	<b>22</b>

		Difference (TD) Learning, SARSA and Q-Learning, $\epsilon$ -Greedy and Softmax policies	
<b>III</b>	<b>Policy Gradient and Actor-Critic Methods</b>	Policy Gradient Theorem, REINFORCE Algorithm, Actor-Critic Architecture, Advantage Estimation, Trust Region Policy Optimization (TRPO), Proximal Policy Optimization (PPO), Applications in control and robotics	<b>22</b>
<b>IV</b>	<b>Deep Reinforcement Learning &amp; Applications</b>	Deep Q-Networks (DQN), Target networks and experience replay, Double DQN, Dueling DQN, Deep Deterministic Policy Gradient (DDPG), Multi-Agent RL (basics), Applications in games (Atari, Chess, Go), robotics, recommendation systems, Ethics and safety in RL	<b>22</b>
<b>TOTAL</b>			<b>88</b>

<b>Credit Distribution</b>

## 6.9 Detailed Syllabus of 8<sup>th</sup> Semester

<b>Paper I/Subject Name: Predictive Modelling &amp; Optimization Techniques</b>	<b>Subject Code: ARI022C801</b>
<b>L-T-P-C – 3-0-2-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: TP</b>

### Objective:

The objectives of the course are to make the students learn various predictive modelling techniques and their real-world applications, equip students with optimization techniques for enhancing the performance of predictive models, impart practical skills in building, evaluating, and tuning models using tools like Python, R, or MATLAB, etc.

**Prerequisites:** Probability and Statistics, Linear Algebra and Calculus, Programming with Python/R, Basic understanding of Machine Learning

### Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Explain</b> and <b>interpret</b> fundamental predictive modelling concepts and statistical learning techniques.	<b>BT 1 &amp; 2</b>
CO 2	<b>Apply</b> regression, classification, and ensemble methods to predictive tasks.	<b>BT 3</b>
CO 3	<b>Analyze</b> and compare model performance using relevant evaluation metrics.	<b>BT 4</b>
CO 4	<b>Evaluate</b> optimization techniques to improve model accuracy and efficiency.	<b>BT 5</b>

### Detailed Syllabus

Modules	Topics	Course Contents	Hours
I	<b>Introduction</b>	Overview of predictive analytics and its applications, Statistical learning and data preparation, Types of predictive models: regression, classification, time-series, Linear and logistic regression, Bias-variance trade-off, Model validation: hold-out, cross-validation	<b>18</b>
II	<b>Advanced Predictive Modelling Techniques</b>	Decision Trees, Random Forests, Gradient Boosting (XGBoost, LightGBM), k-NN, SVM, Naïve Bayes, Model evaluation: Accuracy, Precision, Recall, F1, ROC-AUC, Model interpretability (LIME, SHAP), Handling imbalanced data and missing values, Feature engineering and selection techniques	<b>18</b>
III	<b>Optimization Techniques</b>	Introduction to optimization: objective function, constraints, Gradient Descent and its variants (SGD, Adam, RMSprop), Linear Programming and Integer Programming,	<b>15</b>

		Metaheuristic optimization: Genetic Algorithms, Particle Swarm Optimization, Hyperparameter tuning: Grid Search, Random Search, Bayesian Optimization	
<b>IV</b>	<b>Applications and Case Studies</b>	Predictive analytics in finance, healthcare, marketing, and supply chain, Time series forecasting using ARIMA, Prophet, LSTM, AutoML tools and pipelines (e.g., TPOT, H2O AutoML, Scikit-learn pipelines), Deploying predictive models using Flask/Streamlit, Capstone project: End-to-end predictive modelling with optimization	<b>15</b>
<b>TOTAL</b>			<b>66</b>

<b>Introduction to Machine Learning Lab Syllabus</b>
--

**Detailed Syllabus:**

**Total Lab Hours for the semester = 30 (2 hours per week)**

**Minimum 10 Laboratory experiments based on the following-**

1. Data Exploration and Preprocessing: Load and clean a real-world dataset, handle missing values, outliers, and encode categorical variables, Normalize/standardize features
2. Linear and Logistic Regression Models: Apply linear regression for prediction (e.g., house prices), Apply logistic regression on a binary classification problem, plot decision boundaries and residual errors
3. Decision Tree and Random Forest Classifiers: Build and visualize decision trees, Evaluate Random Forest using accuracy, F1-score, and feature importance, Compare overfitting/underfitting using training vs testing performance
4. Gradient Boosting with XGBoost and LightGBM: Implement XGBoost and LightGBM, Visualize learning curves and confusion matrix, Analyze feature importance and SHAP values
5. K-Nearest Neighbors and SVM Models: Apply k-NN and SVM to multi-class classification problems, Tune hyperparameters (K, kernel type), Visualize the effect of different kernels on decision boundaries
6. Hyperparameter Tuning using Grid Search and Random Search: Use GridSearchCV and RandomizedSearchCV, Compare performance metrics with default vs tuned models, Plot tuning curves
7. Metaheuristic Optimization – Genetic Algorithms: use DEAP/PyGAD or custom implementation, Optimize hyperparameters of a model using GA, Compare with Grid Search,
8. Linear and Integer Programming with PuLP/Excel Solver: Formulate and solve LP/IP problems for resource allocation, Use Python’s PuLP or Excel Solver to find optimal solutions, Apply LP in model selection or feature reduction scenarios
9. Time Series Forecasting: Use ARIMA/Prophet/LSTM on stock or weather data, Plot predictions vs actual, Evaluate using MAE, RMSE
10. Model Explainability: Use SHAP, LIME for explaining Random Forest/XGBoost models, Visualize and interpret SHAP summary plots, Generate insights for stakeholders
11. Deployment of Predictive Model: Build a Streamlit/Flask app for a predictive task, Allow user input and display predictions and charts, Export and import trained model using joblib/pickle
12. Mini Project: Implement end-to-end predictive pipeline, Sample projects: churn prediction, energy forecasting, fraud detection, Documentation and demonstration

<b>Credit Distribution</b>		
<b>Lecture/ Tutorial</b>	<b>Practicum</b>	<b>Experiential Learning</b>

3* 22 NCH = 66 NCH	1 * 15 NCH = 30 NCH	8 * 3 NCH = 24 NCH (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)

<b>Paper II/Subject Name: Cryptography and Network Security</b>	<b>Subject Code: ARI022C802</b>
<b>L-T-P-C – 4-0-0-3</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to explain the basics of cryptography, kinds of security threats in networks and to learn to find the vulnerabilities in programs and to overcome them and to teach about the models and standards for security.

**Prerequisites:** Concepts of Number Theory and Networking

**Course Outcomes**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Understand</b> and <b>illustrate</b> basic cryptographic algorithms, message and web authentication and security issues.	<b>BT 2</b>
CO 2	<b>Demonstrate</b> the current legal and ethical issues towards information.	<b>BT 2</b>
CO 3	<b>Identify</b> the applications of different protocol like SSL, TLS etc.	<b>BT 3</b>
CO 4	<b>Analyze</b> and <b>assess</b> the security services and mechanisms	<b>BT 4</b>

**Detailed Syllabus**

Modules	Topics	Course Contents	Hours
I	<b>Introduction</b>	Need for Security, Security Approaches, Principles of Security, Types of Attacks, Brute Force Attack, Encryption, Decryption, Crptosystem, Cryptographic Techniques: Substitution Ciphers, Transposition Ciphers, Product Ciphers, Stegenography, Block Cipher, Stream Cipher.	22

<b>II</b>	<b>Symmetric and Asymmetric Key Cryptography</b>	Overview, Algorithm Modes and Types, Data Encryption Standard: Simplified DES, The Strength of DES, Differential and Linear Cryptanalysis. Triple DES, Blowfish. Confidentiality using Conventional Encryption: Placement of Encryption Function, Traffic Confidentiality, Key Distribution, Random Number Generation.  Modular Arithmetic, Public Key Cryptography and RSA: Principles of Public Key Cryptosystems, Difference with Symmetric Key Cryptography, The RSA Algorithms, Key Management, Diffie Hellman Key Exchange.	<b>22</b>
<b>III</b>	<b>Authentication Protocols</b>	Message Authentication: Authentication Requirements, Authentication Functions, Message Authentication Codes, MD5 Message Digest Algorithms, Digital Signatures and Authentication Protocols: Digital Signatures, Authentication Protocols, Digital Signature Standards.	<b>22</b>
<b>IV</b>	<b>Security Protocols</b>	Security Applications and Protocols- Authentication Applications: Secure HTTP, HTTPS, ERT, SSH, Kerberos. Email Security: PGP, S/MIME. IP Security: Overview, IPSec architecture.	<b>22</b>
<b>TOTAL</b>			<b>88</b>

<b>Credit Distribution</b>		
<b>Lecture/ Tutorial</b>	<b>Practicum</b>	<b>Experiential Learning</b>
4* 22 NCH = 88 NCH	--	8 * 4 NCH = 32 NCH  (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)

**Text Books:**

1. *Cryptography and Network Security*, Atul Kahate, 2<sup>nd</sup> Edition. 2003, Tata McGraw Hill.
2. *Cryptography and Network security*, Fourozan, 3<sup>rd</sup> Edition, 2007, McGraw Hill

**Reference Books:**

1. William Stallings, *Cryptography and Network Security: Principles and Practices*”, 5<sup>th</sup> Edition, 2010, Prentice Hall.
2. Michael Howard, David LeBlanc, John Viega, *24 Deadly Sins of Software Security: Programming Flaws and How to Fix Them*, 1<sup>st</sup> Edition, 2009, Mc Graw Hill Osborne Media.

<b>Paper III/Subject Name: AI for Robotics (PEC-V)</b>	<b>Subject Code: ARI022D801</b>
<b>L-T-P-C – 4-0-0-4</b>	<b>Credit Units: 04</b>
	<b>Scheme of Evaluation: T</b>

**Objective:**

The objectives of the course are to make the students understand the integration of AI techniques in robotic systems, path planning, localization, and mapping algorithms, apply machine learning and computer vision for robotic perception and control, etc.

**Prerequisites:** Basic Programming (Python/C++), Linear Algebra, Probability, and Calculus, Fundamentals of AI / Machine Learning

### Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	<b>Explain</b> and <b>understand</b> the foundations of robotic systems integrated with AI algorithms.	<b>BT 1 &amp; 2</b>
CO 2	<b>Apply</b> probabilistic reasoning and search techniques to robot planning and navigation.	<b>BT 3</b>
CO 3	<b>Analyze</b> perception, localization, and mapping algorithms.	<b>BT 4</b>
CO 4	<b>Assess</b> machine learning and computer vision-based models for robotic perception and control.	<b>BT 5</b>

### Detailed Syllabus:

Modules	Topics	Course content	Periods
I	<b>Introduction</b>	Overview of robotics: components (sensors, actuators, controllers), Role of AI in robotics: perception, cognition, control, Agent-based models and environments, Search algorithms: BFS, DFS, A*, D*, Configuration space and motion planning, Robot Operating System (ROS) introduction	22
II	<b>Localisation, Mapping and Navigation</b>	Probabilistic robotics basics, Markov localization and particle filters, Kalman and Extended Kalman Filters (EKF), Simultaneous Localization and Mapping (SLAM), Path planning: RRT, PRM, Obstacle avoidance: potential fields, dynamic window approach	22
III	<b>Perception and Computer Vision</b>	Camera models and calibration, Feature detection and matching (SIFT, ORB), Depth estimation and stereo vision, Visual odometry and 3D reconstruction, Object detection: YOLO, SSD, Sensor fusion (LIDAR + vision)	22
IV	<b>Learning &amp; Autonomous Decision Making</b>	Supervised and Reinforcement Learning for robotics, Q-Learning, SARSA, Deep Q Networks (DQN), Policy gradient and actor-critic methods, Behavior trees and task-level planning, Human-robot interaction (HRI), Ethics and safety in AI-driven robots	22
<b>Total</b>			<b>88</b>

Credit Distribution		
Lecture/ Tutorial	Practicum	Experiential Learning
4* 22 NCH = 88 NCH	--	8 * 4 NCH = 32 NCH (Problem Solving, Seminar, Case Study, Discussion, Internship, Projects)
