ROYAL SCHOOL OF LIFE SCIENCES

(RSLSC)

DEPARTMENT OF BOTANY

COURSE: B.SC BOTANY

TABLE OF CONTENTS

Sl. No.	Contents	Page nos
1	Programme Structure	02-06
2	Scheme of Evaluation	07
3	Syllabus For 1 st Semester	08-16
4	Syllabus For 2 nd Semester	17-25
5	Syllabus For 3 rd Semester	26-32
6	Syllabus For 4 th Semester	33-39
7	Syllabus For 5 th Semester	40-50
8	Syllabus For 6 th Semester	51-61
9	Generic Papers (1 st To 4 th Semester)	62-75

B.SC BOTANY PROGRAMME STRUCTURE

1ST SEMESTER

Sl.No.	Subject Code	Names of subjects	L	T	P	C	TCP
Core Subjects							
1	BOT142C101	Microbiology and Phycology	3	1	0	4	4
2	BOT142C102	Mycology and Phytopathology	3	1	0	4	4
3	BOT142C103	Biomolecules and Cell Biology	3	1	0	4	4
4	BOT142C114	Practical-I	0	0	6	6	12
Total credit for core papers						18	24
Ability Enhancement Compulsory Courses (AECC)							
5	CEN982A101	Communicative English - I	1	0	0	1	1
6	BHS982A104	Behavioural Science – I	1	0	0	1	1
Generic Elective							
7	BOT142G101	GE1: Plant biodiversity	2	0	1	3	4
8	BOT142G102	GE2: Nursery & Gardening	2	0	1	3	4
TOTAL CREDIT FOR THE SEMESTER			18	0	8	26	36

2ND SEMESTER

Sl.No.	Subject Code	Names of subjects	L	T	P	C	TCP
Core Subjects							

1	BOT142C201	Archegoniatae	3	1	0	4	4	
2	BOT142C202	Anatomy of Angiosperms	3	1	0	4	4	
3	BOT142C203	Economic Botany	3	1	0	4	4	
4	BOT142C214	Practical-II	0	0	6	6	12	
Total credit for core papers							18	24
Ability Enhancement Compulsory Courses (AECC)								
5	CEN982A101	Communicative English – II	1	0	0	1	1	
6	BHS982A104	Behavioural Science – II	1	0	0	1	1	
Generic Elective								
7	BOT142G201	GE-3: Mushroom Cultivation	2	0	1	3	4	
8	BOT142G202	GE-4: Plant Ecology And Economic Botany	2	0	1	3	4	
TOTAL CREDIT FOR THE SEMESTER			18	0	8	26	36	

3RD SEMESTER								
Sl.No.	Subject Code	Names of subjects	L	T	P	C	TCP	
Core Subjects								
1	BOT142C301	Genetics	3	1	0	4	4	
2	BOT142C302	Plant Ecology and phytogeography	3	1	0	4	4	
3	BOT144C313	Practical III	0	0	4	4	8	
Total credit for core papers							12	16

Ability Enhancement Compulsory Courses (AECC)							
4	CEN982A301	Communicative English - III	1	0	0	1	1
5	EVS982A303	Environmental Science	2	0	0	2	2
Ability Enhancement Elective Courses (AEEC)							
6		AEEC/SEC/-1*	2	0	0	2	2
Generic Elective							
7	BOT142G301	GE-5: Botany in rural communities	2	0	1	3	4
8	BOT142G302	GE-6: Plant Biotechnology	2	0	1	3	4
TOTAL CREDIT FOR THE SEMESTER			17	0	6	23	29

4TH SEMESTER							
Sl.No.	Subject Code	Names of subjects	L	T	P	C	TCP
Core Subjects							
1	BOT142C401	Plant Systematics	4	1	0	5	5
2	BOT142C402	Reproductive Biology of Angiosperms	4	1	0	5	5
3	BOT142C413	Practical IV	0	0	4	4	8
Total credit for core papers						14	18
Ability Enhancement Compulsory Courses (AECC)							
4	CEN982A401	Communicative English - IV	1	0	0	1	1
Ability Enhancement Elective Courses (AEEC)							
5		AEEC/SEC/-2*	2	0	0	2	2

Generic Elective							
6	BOT142G401	GE-7: Medicinal botany	2	0	1	3	4
7	BOT142G402	GE-8: Environmental Biotechnology	2	0	1	3	4
TOTAL CREDIT OF THE SEMESTER			15	2	6	23	29

5TH SEMESTER							
Sl.No.	Subject Code	Names of subjects	L	T	P	C	TCP
Core Subjects							
1	BOT142C501	Plant Physiology	3	1	0	4	4
2	BOT142C502	Plant Metabolism	3	1	0	4	4
3	BOT142C513	Practical V	0	0	4	4	8
Total credit for core papers						12	16
Ability Enhancement Compulsory Courses (AECC)							
5	CEN982A501	Communicative English - V	1	0	0	1	1
Discipline Specific Elective (DSE) (Any One To Be Selected)							
6	BOT142D501	Research Methodology	3	1	2	6	8
7	BOT142D502	Analytical techniques in plant science.	3	1	2	6	8
8	BOT142P521	Project work I	0	0	6	6	12
TOTAL CREDIT OF THE SEMESTER			12	1	12	25	37

6TH SEMESTER							
Sl.No.	Subject Code	Names of subjects	L	T	P	C	TCP
Core Subjects							
1	BOT142C601	Plant Biotechnology	3	1	0	4	4
2	BOT142C602	Molecular Biology	3	1	0	4	4
3	BOT142C613	Practical VI	0	0	4	4	8
Total credit for core papers						12	16
Ability Enhancement Compulsory Courses (AECC)							
4	CEN982A501	Communicative English - VI	1	0	0	1	1
Discipline Specific Elective (DSE) (Any One To Be Selected)							
5	BOT142D601	Plant diversity and human welfare	3	1	2	6	8
6	BOT142D602	Industrial and environmental microbiology	3	1	2	6	8
7	BOT142P621	Project work II	0	0	6	6	12
TOTAL CREDIT OF THE SEMESTER			12	1	12	25	37
TOTAL CREDIT OF THE COURSE [26 (1st) + 26(2nd) + 23(3rd) + 23(4th) + 25(5th) +25(6th)]= 148							

SCHEME OF EVALUATION

I. Theory Papers (T):

- a. Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))
- b. Mid-term examination: 10%
- c. Attendance: 5%
- d. End term examination: 70%

II. Practical Papers (P):

- a. Continuous evaluation: 25% (skill test, lab copy, practical viva, lab involvement/performance) (any five).
- b. Attendance: 5%
- c. End term examination: 70 %

III. Semester wise distribution of courses and credits:

Semester	No. of Core papers and total credit of core papers	No. of DSE papers and total credit of DSE papers	Project work credit	No. of AECC papers and credit	No. Of AEEC papers and credit	No. Of GE papers and credit	Total credit
1 st	4, 18	0	0	2,2	0	2, 6	26
2nd	4,18	0	0	2,2	0	2, 6	26
3rd	3,12	0	0	2,2	1,2	2, 6	23
4th	3,14	0	0	1,1	1,2	2, 6	23
5th	3,12	1,6	6	1,1	0	0	25
6th	3,12	1,6	6	1,1	0	0	25
Total							148

1ST SEMESTER

DETAILED SYLLABUS OF 1ST SEMESTER

Paper I: MICROBIOLOGY AND PHYCOLOGY,
Subject Code: BOT142C101, L-T-P-C: 3-1-0-4, Credit Units: 04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>To introduce the students to the world of microbes focusing on the diversity of bacteria and viruses.</p> <p>To enable development of the basic concepts of the fundamental biological processes in bacteria and viruses.</p> <p>To provide an understanding of the economic aspects of bacteria.</p> <p>To introduce the range of diversity amongst the algae.</p> <p>To introduce the ecological roles and biotechnological importance of algae.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p>	<p>The course shall enable the students to understand the physical dimensions, forms, functions and habitats of bacteria.</p> <p>The students shall be able to understand the structure of typical viruses, their mode of replication, host ranges of typical plant and animal viruses and pathogenesis of viral diseases.</p> <p>On completion of the course, the students shall become aware of the diversity of algae, the ecological role of algae and the biotechnological application of certain species of the group.</p> <p>The students shall gain hands on experience of bacterial culture in the laboratory.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End-term examination: 70%</p>

Prerequisite: Basic knowledge of biology and chemistry up to class 12

Detailed Syllabus

Modules	Course content	Periods
I	Introduction to microbial world: Microbial nutrition, growth and metabolism. Economic importance of viruses with reference to vaccine production, role in research, medicine and diagnostics, as causal organisms of plant diseases. Economic importance of bacteria with reference to their role in agriculture and industry (fermentation and medicine).	16
II	Viruses and Bacteria: Viruses: Discovery, physiochemical and biological characteristics; classification (Baltimore), general structure with special reference to viroids and prions; replication (general account), DNA virus (T-phage), lytic and lysogenic cycle; RNA virus (TMV). Bacteria: Discovery, general characteristics; Types-archaeobacteria, eubacteria, wall-less forms (mycoplasma and spheroplasts); Cell structure; Nutritional types; Reproduction-vegetative, asexual and recombination (conjugation, transformation and transduction).	16
III	Algae: Algae: General characteristics; Ecology and distribution; range of thallus organization; Cell structure and components; cell wall, pigment system, reserve food (of only groups represented in the syllabus), flagella; methods of reproduction; Classification; criteria, system of Fritsch, and evolutionary classification of Lee (only upto groups); Significant contributions of important phycologists (F.E. Fritsch, G.M. Smith, R.N. Singh, T.V. Desikachary, H.D. Kumar, M.O.P. Iyengar). Role of algae in the environment, agriculture, biotechnology and industry. Economic importance of Algae.	16
IV	Major Groups of Algae: Cyanophyta and Xanthophyta: Ecology and occurrence; Range of thallus organization; Cell structure; Reproduction, Morphology and life-cycle of <i>Nostoc</i> and <i>Vaucheria</i> . Chlorophyta and Charophyta: General characteristics; Occurrence; Range of thallus organization; Cell structure; Reproduction. Morphology and life-cycles of <i>Chlamydomonas</i> , <i>Volvox</i> , <i>Oedogonium</i> , <i>Coleochaete</i> , <i>Chara</i> . Evolutionary significance of <i>Prochloron</i> . Phaeophyta and Rhodophyta: Characteristics; Occurrence; Range of thallus organization; Cell structure; Reproduction. Morphology and life-cycles of <i>Ectocarpus</i> , <i>Fucus</i> and <i>Polysiphonia</i> .	16
Total		64

Text Books:

3. Wiley, J.M., Sherwood, L.M. and Woolverton C.J., Prescott. Microbiology. 2017. McGraw Hill International.

4. Brown A.E. and Smith H.Benson's Microbiological Applications: Laboratory Manual in General Microbiology.2016. McGraw-Hill Education.

Reference Books:

1. Tortora G.J., Funke B.R., Case C.L., Weber D and Bair W. Microbiology: An Introduction (13th Edition). 2018. Pearson Publisher.
2. Madigan M.T., Martinko J.M., Bender K.S., Buckley D.H., Stahl D.A., Brock T. Brock Biology of Microorganisms (14th Edition). 2014. Pearson Publisher.
3. Harvey R.A. and Cornelissen C.N. Lippincott Illustrated Reviews: Microbiology (Lippincott Illustrated Reviews Series) Third, North American Edition. 2012. LWW; Third, North American edition.

Paper II: MYCOLOGY AND PHYTOPATHOLOGY
Subject Code: BOT142C102, L-T-P-C=3-1-0-4, Credit Units: 04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>To introduce the students to the fungal diversity, various modes of fungal nutrition, their detailed taxonomy and life cycles, fungal associations like lichens and mycorrhiza., economic and biotechnological prospects of fungi To introduce various plant pathogens viz. bacterial, viral and fungal.</p>	<p>Lecture Presentation Assignment Individual/group presentation</p>	<p>The course shall equip the students with the understanding of the wide diversity of fungi, their nutritional and ecological variations and roles.</p> <p>The learners shall gain an understanding of the symbiotic relation of some fungi.</p> <p>The course shall provide the basic understanding of plant pathology.</p> <p>The students shall be able to grasp the applications of mycology.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology and chemistry up to class 12

Detailed Syllabus

Modules	Course content	Periods
I	Introduction to fungi and their groups: Introduction to true fungi: Definition, General characteristics; Affinities with plants and animals; Thallus organization; Cell wall composition; Nutrition; Classification. Chytridiomycetes: General account. Zygomycota: General characteristics; Ecology; Thallus organisation; Life cycle with reference to <i>Rhizopus</i> . Ascomycota: General characteristics (asexual and sexual fruiting bodies); Ecology; Life cycle, Heterokaryosis and parasexuality; life cycle and classification with reference to <i>Saccharomyces</i> , <i>Aspergillus</i> , <i>Penicillium</i> , <i>Alternaria</i> , <i>Neurospora</i> , and <i>Peziza</i> .	16
II	Higher fungi: Basidiomycota: General characteristics; Ecology; Life cycle and Classification with reference to black stem rust on wheat <i>Puccinia</i> (Physiological Specialization), loose and covered smut (symptoms only), <i>Agaricus</i> ; Bioluminescence, Fairy Rings and Mushroom Cultivation. Allied Fungi: General characterises; Status of Slime molds, Classification; Occurrence; Types of plasmodia; Types of fruiting bodies. Oomycota: General characteristic; Ecology; Life cycle and classification with reference to <i>Phytophthora</i> , <i>Albugo</i> .	16
III	Mutualism: Symbiotic associations: Lichen – Occurrence; General characteristics; Growth forms and range of thallus organization. Nature of associations of algal and fungal partners. Reproduction. Mycorrhiza-Ectomycorrhiza, Endomycorrhiza and their significance. Applied Mycology: Role of fungi in biotechnology, Application of fungi in food industry (Flavour & texture, Fermentation, Baking, Organic acids, Enzymes, Mycoproteins); Secondary metabolites (Pharmaceutical preparations); Agriculture (Biofertilizers); Mycotoxins; Biological control (Mycofungicides, Mycoherbicides, Mycoinsecticides, Myconematicides); Medical mycology.	16
IV	Phytopathology: Terms and concepts; General symptoms; Geographical distribution of diseases; Etiology; Symptomology. Host-Pathogen relationships. Disease cycle and environmental relation. Prevention and control of plant diseases, and role of quarantine. Bacterial diseases – Citrus canker and angular leaf spot of cotton. Viral diseases – Tobacco Mosaic viruses, vein clearing. Fungal diseases – Early blight of potato, Black stem rust of wheat, White rust of crucifers.	16
Total		64

2. Webster J and Weber R.W.S. Introduction to fungi. 2007. Cambridge university press.
3. Lucas J.A. Plant Pathology and Plant Pathogens. 2011. John Wiley and Sons Ltd

Paper III: BIO-MOLECULES AND CELL BIOLOGY,
Subject Code: BOT142C103, L-T-P-C= 3-1-0-4 Credit Units: 04.

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
To introduce the biomacromolecules and their specific attributes, explain the laws of thermodynamics in the context of bioenergetics in the biological reaction processes, give a comprehensive understanding of the structure, function and the mechanism of functions of enzymes, present cell structure and function in the evolutionary perspective of prokaryotes and eukaryotes.	Lecture Presentation Assignment Individual/group presentation	The course shall equip the students with the understanding of various bonds involved in formation of biomolecules, their types and roles. The learner shall gain an understanding of laws of thermodynamics and enzyme kinetics. The course shall provide basic knowledge on cell and its organelles. The student will gain the basic concept of cell cycle and its regulation.	Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three)) Mid-term examination: 10% Attendance: 5% End term examination: 70%

Prerequisite: Basic knowledge of biology and chemistry up to class 12

Detailed Syllabus

Modules	Course content	Periods
I	Bio-molecules: Types and significance of chemical bonds; Structure and properties of water; pH and buffers. Carbohydrates: Nomenclature and classification; Monosaccharides; Disaccharides; Oligosaccharides and polysaccharides. Lipids: Definition and major classes of storage and structural lipids; Fatty acids structure and functions; Essential fatty acids; Triacyl glycerols structure, functions and properties; Phosphoglycerides. Proteins: Structure of amino acids; Levels of protein structure-primary, secondary, tertiary and quarternary; Protein denaturation and biological roles of proteins. Nucleic acids: Structure of nitrogenous bases; Structure and function of nucleotides; Types of nucleic acids; Structure of A, B, Z types of DNA; Types of RNA; Structure of tRNA.	16
II	Bioenergetics and enzymes: Bioenergenetics: Laws of thermodynamics. Enzymes: Structure of enzyme: holoenzyme, apoenzyme, cofactors, coenzymes and prosthetic group; Classification of enzymes; Features of active site, substrate specificity, mechanism of action (activation energy, lock and key hypothesis, induced - fit theory), Michaelis – Menten equation, enzyme inhibition and factors affecting enzyme activity.	16
III	Cell: Cell as a unit of structure and function; Characteristics of prokaryotic and eukaryotic cells; Origin of eukaryotic cell (Endosymbiotic theory). Cell wall and plasma membrane: Chemistry, structure and function of Plant cell wall. Overview of membrane function; fluid mosaic model; Chemical composition of membranes.	16
IV	Cellular organelles, nucleus and cell division: Cell organelles: Structural organization and function of chloroplast, mitochondria, endoplasmic reticulum, Golgi Apparatus, Lysosomes and peroxisomes, semiautonomous nature of mitochondria and chloroplast. Nucleus: Structure, nuclear envelope, nuclear pore complex, nuclear lamina, molecular organization of chromatin; nucleolus. Cytoskeleton: Role and structure of microtubules, microfilaments and intermediary filament. Cell division: Phases of eukaryotic cell cycle, mitosis and meiosis; Regulation of cell cycle-checkpoints, role of protein kinases.	16
Total		64

Paper IV: PRACTICAL-I
Subject Code: BOT142C114, L-T-P-C=0-0-6-6, Credit Units: 06

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>To introduce the students to the world of microbes by showing them live cultures and photographs of bacteria and viruses.</p> <p>To enable the students to have a hands-on experience of observing algae and fungi under microscope</p>	Hands on activity or Laboratory work	<p>The course will help the students to gain practical knowledge of lower plants as well as fungi and other microbes.</p> <p>They will be equipped to identify plant diseases bases on symptoms.</p> <p>They will be able to identify cell structures under microscopes.</p>	<p>Continuous evaluation: 25% (skill test, lab copy, practical viva, lab involvement/ performance) (any five).</p> <p>Attendance: 5%</p> <p>End term examination: 70 %</p>

Prerequisite: Basic knowledge of biology and chemistry up to class 12

Detailed Syllabus

Modules	Course content	Periods.
I	<p>Microbiology and Algae: Electron micrographs/Models of viruses – T-Phage and TMV, Line drawings/ Photographs of Lytic and Lysogenic Cycle. Types of Bacteria to be observed from temporary/permanent</p>	12

	slides/photographs. Electron micrographs of bacteria, binary fission, endospore, conjugation, root Nodule. Gram staining. Study of vegetative and reproductive structures of <i>Nostoc</i> , <i>Chlamydomonas</i> , <i>Volvox</i> , <i>Oedogonium</i> , <i>Coleochaete</i> , <i>Chara</i> , <i>Vaucheria</i> , <i>Ectocarpus</i> , <i>Fucus</i> and <i>Polysiphonia</i> , temporary preparations and permanent slides (subject to availability, a minimum of 5 genera to be studied).	
II	Fungi: Types of fungi (Unicellular, coenocytic/septate mycelium, ascocarps & basidiocarps). Type study of <i>Saccharomyces</i> , <i>Rhizopus</i> , <i>Aspergillus</i> , <i>Penicillium</i> , <i>Neurospora</i> , <i>Peziza</i> , <i>Alternaria</i> , <i>Agaricus</i> , <i>Phytophthora</i> , <i>Albugo</i> , <i>Puccinia</i> (subject to availability, a minimum of 5 genera to be studied). Study of growth forms of lichens (crustose, foliose and fruticose) on different substrates. Mycorrhizae: ectomycorrhiza and endomycorrhiza (Photographs).	12
III	Phytopathology: Herbarium specimens/ photographs of bacterial diseases; Citrus Canker; Angular leaf spot of cotton, Viral diseases: TMV, Vein clearing, Fungal diseases: Early blight of potato, Black stem rust of wheat and White rust of crucifers.	12
IV	Biomolecules and cell biology: Qualitative tests for carbohydrates, reducing sugars, non-reducing sugars, lipids and proteins. Study of plant cell structure with the help of epidermal peel mount of Onion/ <i>Rhoeo</i> / <i>Crinum</i> . Demonstration of the phenomenon of protoplasmic streaming in <i>Hydrilla</i> leaf. Study different stages of mitosis and meiosis through photographs and live plant cells and flower buds.	12
Total		48

2ND SEMESTER

DETAILED SYLLABUS OF 2ND SEMESTER

Paper I: ARCHEGONIATAE

Subject Code: BOT142C201, L-T-P-C3-1-0-4, Credit Units: 04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>To introduce the students to the world of archegoniates and their evolutionary significance.</p> <p>To teach the students the major classes of bryophytes, their detailed taxonomy and their life cycles.</p> <p>To introduce the students to various groups of pteridophytes.</p> <p>To give an idea about the gymnosperms.</p> <p>To give a brief idea on economic importance of all archegoniates.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p>	<p>The course will enable students to know the earlier plants, their vegetative and reproductive structures and their importance.</p> <p>The course shall equip the students with the understanding of evolutionary lines in each group of archegoniates.</p> <p>The learners shall gain an understanding of the various important features of the lower plants like stellar evolution and seed habit in pteridophytes.</p> <p>The student will have a clear concept on ecological importance of the archegoniates.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course content	Periods
I	Introduction to archegoniates: Unifying features of archegoniates. Transition to land habit and its evolutionary significance. Alternation of generations.	10

II	<p>Bryophytes: Bryophytes: General characteristics; Adaptations to land habit; Classification; Range of thallus organization. Photosynthetic tissues.</p> <p>Type Studies: Classification (up to family), morphology, anatomy and reproduction, evolutionary trends of <i>Riccia</i>, <i>Marchantia</i>, <i>Anthoceros</i>, <i>Sphagnum</i> and <i>Funaria</i>. Ecological and economic importance of bryophytes.</p>	19
III	<p>Pteridophytes: Pteridophytes: General characteristics; Classification; Early land plants (<i>Cooksonia</i> and <i>Rhynia</i>). Type Studies: Classification (up to family), morphology, anatomy and reproduction of <i>Psilotum</i>, <i>Selaginella</i>, <i>Equisetum</i>, <i>Marsilea</i> and <i>Pteris</i>. Apogamy, and apospory, heterospory and seed habit, telome theory, stelar evolution. Ecological and economic importance of pteridophytes.</p>	19
IV	<p>Gymnosperms: Gymnosperms: General characteristics. Classification (up to family). Morphology, anatomy and reproduction of <i>Cycas</i>, <i>Pinus</i> and <i>Gnetum</i>. Ecological and economic importance of gymnosperms.</p>	16
Total		64

Text Books:

Paper II: PLANT ANATOMY

Subject Code: BOT142C202, L-T-P-C= 3-1-0-4, Credit Units:04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>To acquaint the students about the various tissues of the plant.</p> <p>To enable the students to understand the development and functions of various tissue systems inside the plant body.</p> <p>To introduce the concept of secondary growth of plants.</p> <p>To introduce the special types of anatomical adaptations in xerophytes and hydrophytes.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p>	<p>The course will enable students to know about the different tissue systems in angiosperms and how they function.</p> <p>The students will get a concept on different developmental theories of root and shoot development.</p> <p>The students will get a concept on different types of woods developed in plant body.</p> <p>The learners shall gain an idea of dendrochronology and anatomical adaptations.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course content	Periods
I	<p>Introduction and organization of plant body: Applications of plant anatomy in systematics, forensics and pharmacognosy. Internal organization of plant body: The three tissue systems, types of cells and tissues. Tissues: Classification of tissues; Simple and complex tissues. Pits and plasmodesmata; Wall ingrowths and transfer cells. Ergastic substances. Hydathodes, lenticels, cavities, lithocysts and laticifers.</p>	18

II	Meristems, vascular system and structure of root, stem and leaves: Apical meristems: Evolution of concept of organization of shoot apex (Apical cell theory, Histogen theory, Tunica Corpus theory, continuing meristematic residue, cytohistological zonation). Types of vascular bundles. Structure of dicot and monocot stem. Origin, development, arrangement and diversity in size and shape of leaves; Structure of dicot and monocot leaf, Quiescent centre; Root cap. Structure of dicot and monocot root. Endodermis, exodermis and origin of lateral root.	18
III	Secondary growth: Vascular Cambium and Wood: Structure, function and seasonal activity of cambium. Secondary growth in root and stem. Axially and radially oriented elements; Types of rays and axial parenchyma. Cyclic aspects and reaction wood; Sapwood and heartwood; Ring and diffuse porous wood; Early and late wood, tyloses. Dendrochronology. Development and composition of periderm.	18
IV	Specialised anatomical structures: Adaptive and Protective Systems: Epidermal tissue system, cuticle, epicuticular waxes, trichomes(uni- and multicellular, glandular and nonglandular, two examples of each), stomata (classification). Anatomical adaptations of xerophytes and hydrophytes.	10

Paper III: ECONOMIC BOTANY

Subject Code: BOT142C203, L-T-P-C=3-1-0-4, Credit Units: 04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>To enable the students to have an understanding on how cultivated plants originated and how they are introduced across the world.</p> <p>To impart a brief idea on various methods used for extraction of various plant products like rubber. To introduce the students to various uses of plants in day to day life.</p> <p>To provide an understanding of the economic aspects of various plants.</p>	<p>Lecture Presentation Assignment Individual/group presentation</p>	<p>The course will enable students to understand how plants influence day to day life.</p> <p>The course will help the students to have a brief idea on different types of plants used for economic purposes.</p> <p>The course will help the students to have a brief idea on industrial application of different plant parts for economic purposes.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course content	Periods
I	<p>Introduction, origin, cereals and legumes: Origin of Cultivated Plants: Concept of Centres of Origin, their importance with reference to Vavilov's work. Examples of major plant introductions; Crop domestication and loss of genetic diversity; evolution of new crops/varieties, importance of germplasm diversity. Cereals: Wheat and Rice (origin, morphology, processing & uses). Brief account of millets. Legumes: Origin, morphology</p>	18

	and uses of Chick pea, Pigeon pea and fodder legumes. Importance to man and ecosystem.	
II	Sugars, starches, spices and beverages: Sources of sugars and starches: Morphology and processing of sugarcane, products and by-products of sugarcane industry. Potato – morphology, propagation & uses. Spices: Listing of important spices, their family and part used. Economic importance with special reference to fennel, saffron, clove and black pepper. Beverages: Tea, Coffee (morphology, processing & uses)	18
III	Oils and fats and rubber: Sources of oils and fats: General description, classification, extraction, their uses and health implications groundnut, coconut, linseed, soybean, mustard and coconut (Botanical name, family & uses). Essential Oils: General account, extraction methods, comparison with fatty oils & their uses. Natural Rubber: Para-rubber: tapping, processing and uses.	14
IV	Medicinal, timber and fiber plants: Drug-yielding plants: Therapeutic and habit-forming drugs with special reference to <i>Cinchona</i> , <i>Digitalis</i> , <i>Papaver</i> , <i>Swvertia</i> , <i>Andrographis</i> and <i>Cannabis</i> ; Tobacco (Morphology, processing, uses and health hazards). Timber plants: General account with special reference to teak and pine. Fibers: Classification based on the origin of fibers; Cotton, Coir and Jute (morphology, extraction and uses).	14

Paper IV: PRACTICAL-II

Subject Code: BOT142C214, L-T-P-C= 0-0-6-6, Credit Units: 06

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
To impart practical knowledge on various group of archegoniates, have a clear concept on cellular structure of plants by microscopic observation, have a hands on experience on economically important plant parts used and do microchemical tests to observe the molecules present there.	Hands on activity or Laboratory work	<p>The course will help the students to gain practical knowledge of vascular plants.</p> <p>They will be equipped to identify various anatomical structures of plant body.</p> <p>They will be able to identify economic importance of various plants.</p>	<p>Continuous evaluation: 25% (skill test, lab copy, practical viva, lab involvement/ performance) (any five).</p> <p>Attendance: 5%</p> <p>End term examination: 70 %</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course content	Periods
I	Bryophytes: Morphology of thallus, whole mount of rhizoids & Scales, vertical section of thallus through Gemma cup, whole mount of Gemmae (all temporary slides), vertical section of Antheridiophore, Archegoniophore, longitudinal section of Sporophyte (all permanent slides) of <i>Riccia</i> , <i>Marchantia</i> , <i>Anthoceros</i> , <i>Sphagnum</i> , <i>Funaria</i> .	12

II	<p>Pteridophytes and Gymnosperms: <i>Psilotum</i>- Study of specimen, transverse section of synangium (permanent slide). - Morphology, whole mount of leaf, transverse section of stem, whole mount of strobilus, whole mount of microsporophyll and megasporophyll (temporary slides), longitudinal section of strobilus (permanent slide) of <i>Selaginella</i>, <i>Equisetum</i>, <i>Pteris</i>, <i>Pinus</i>, <i>Gnetum</i>.</p>	12
III	<p>Plant anatomy: Study of anatomical details through permanent slides/temporary stain mounts/ macerations/museum specimens/microphotographs with the help of suitable examples. Apical meristem of root, shoot and vascular cambium. Distribution and types of parenchyma, collenchyma and sclerenchyma. Xylem: Tracheary elements-tracheids, vessel elements; thickenings; perforation plates; xylem fibres. Wood: ring porous; diffuse porous; tyloses; heart- and sapwood. Phloem: Sieve tubes-sieve plates; companion cells; phloem fibres. Epidermal system: cell types, stomata types; trichomes: non glandular and glandular. Root: monocot, dicot, Stem: monocot, dicot, lenticels. Leaf: isobilateral, dorsiventral, C4 leaves (Kranz anatomy). Adaptive Anatomy: xerophytes, hydrophytes. Secretory tissues: cavities, lithocysts and laticifers.</p>	12
IV	<p>Economic botany : Cereals: Wheat,Rice Legumes: Soybean, Groundnut, Sources of sugars and starches: Sugarcane , PotatoSpices: Black pepper and Clove (habit and sections). Beverages: Tea (plant specimen, tea leaves), Coffee (plant specimen, beans). Sources of oils and fats: Coconut, Mustard, Essential oil-yielding plants: Habit sketch of <i>Santalum</i> and <i>Eucalyptus</i> (specimens/photographs). Rubber: specimen, photograph/model of tapping, samples of rubber products. Drug-yielding plants: Specimens of <i>Digitalis</i> and <i>Cannabis</i>. Tobacco: specimen and products of Tobacco. Woods: <i>Tectona</i>, <i>Pinus</i>: Specimen, Section of young stem. Fiber-yielding plants: Cotton , Jute</p>	12

3RD SEMESTER

DETAILED SYLLABUS OF 3RD SEMESTER

Paper I: GENETICS

Subject Code: BOT142C301, L-T-P-C= 3-1-0=4, Credit Units: 04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>To acquaint the students about the basics of plant genetics and heredity.</p> <p>To introduce the students to various laws of Mendelism.</p> <p>To give a brief idea about the linkage-crossing over.</p> <p>To give an idea about the different types of inheritance.</p> <p>To impart basic knowledge on mutations and chromosomal aberrations.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p>	<p>The course will enable students to understand how plants inherit characters.</p> <p>The students will gather knowledge on different types of inheritance.</p> <p>The students will have a concept on gene structure.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course content	Periods
I	Mendelism and Quantitative inheritance: Mendelism: History; Principles of inheritance; Chromosome theory of inheritance; Autosomes and sex chromosomes; Probability and pedigree analysis; Incomplete dominance and codominance; Multiple alleles, Lethal alleles, Epistasis, Pleiotropy, Recessive and Dominant traits, Penetrance and Expressivity, Numericals; Polygenic inheritance: Concept, mechanism, examples. Monogenic vs polygenic Inheritance.	16
II	Extrachromosomal Inheritance and Linkage and crossing over: Chloroplast mutation: Variegation in Four o'clock plant; Mitochondrial mutations in yeast; Maternal effects-shell coiling in snail; Infective heredity-Kappa particles in Paramecium. Sex-determination and Sex-linked Inheritance. Linkage: concept & history, complete & incomplete linkage, bridges experiment, coupling & repulsion, recombination frequency, linkage maps based on two and three factor crosses. Crossing over: concept and significance, cytological proof of crossing over.	16
III	Mutations and Chromosomal Aberrations: Types of mutations, effects of physical & chemical mutagens. Numerical chromosomal changes: Euploidy, Polyploidy and Aneuploidy. Structural chromosomal changes: Deletions, Duplications, Inversions & Translocations.	16
IV	Fine structure of gene and population and evolutionary genetics: Classical vs molecular concepts of gene; Cis-Trans complementation test for functional allelism. Allele frequencies, Genotype frequencies, Hardy-Weinberg Law, role of natural selection, mutation, genetic drift. Genetic variation and Speciation.	16

Paper II: PLANT ECOLOGY AND PHYTOGEOGRAPHY
Subject Code: BOT142C302, L-T-P-C=3-1-0-4, Credit Units: 04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>To acquaint the students about environment and plant interactions.</p> <p>To give a concept on various plant communities and community succession in a particular habitat.</p> <p>To impart the basic concept on biogeography.</p> <p>To introduce traditional knowledge in botany.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p>	<p>The course will enable students to understand how plants interact with their environment.</p> <p>The course will enable the students to have a clear understanding of concepts of phytogeography and endemism.</p> <p>The course will give a brief knowledge on traditional uses of plants.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course content	Periods
I	<p>Ecological factors: Basic concepts; Levels of organization. Inter-relationships between the living world and the environment, the components and dynamism, homeostasis. Soil: Origin, formation, composition, soil profile. Water: States of water in the environment, precipitation types. Light</p>	16

	and temperature: Variation Optimal and limiting factors. Shelford law of tolerance. Biotic interactions (2 lectures) Trophic organization, basic source of energy, autotrophy, heterotrophy; symbiosis, commensalism, parasitism; food chains and webs; ecological pyramids; biomass, standing crop. Adaptation of hydrophytes and xerophytes.	
II	Plant communities and ecosystem; Biotic interactions: Trophic organization, basic source of energy, autotrophy, heterotrophy; symbiosis, commensalism, parasitism; food chains and webs; ecological pyramids; biomass, standing crop. Ecotone and edge effect. Succession; Processes and types. Ecosystem Structure; energy flow Ecological pyramids production and productivity; Biogeochemical cycling; Cycling of carbon, nitrogen and Phosphorous.	16
III	Phytogeography and ecological niche: Principle biogeographical zones; Endemism. Definition; Characteristics and Dynamics of Population. Ecological Speciation; Concept of ecological amplitude; Habitat and niche; Characters: analytical and synthetic.	16
IV	Ethnobotany: Ethnobotany in India: Methods to study ethnobotany. Applications of Ethnobotany: National interacts. Palaeo-ethnobotany. Folk medicines of ethnobotany, ethnomedicine, ethnoecology. Ethnic communities of India. Application of natural products to certain diseases- Jaundice, cardiac, infertility, diabetics, Blood pressure and skin diseases.	16

Paper III: PRACTICAL-III
Subject Code: BOT142C314, L-T-P-C= 0-0-4-4, Credit Units: 04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
To impart practical knowledge on various principles of genetics, give a idea on different cytological techniques, special chromosomes. To give a brief idea on the ecological processes in the environment.	Hands on activity or Laboratory work	The course will help the students to gain practical knowledge of cell cycle, special chromosomes etc. They will be equipped to understand different ecological processes as well interactions.	Continuous evaluation: 25% (skill test, lab copy, practical viva, lab involvement/ performance) (any five). Attendance: 5% End term examination: 70 %

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course content	Periods
I	<ol style="list-style-type: none"> 1. Study of cell division – Mitosis in onion root tips (Squash method). 2. Study of cell division – Meiosis in <i>Rheo discolor</i> or <i>Allium Cepa</i> or any available material/flower buds (Smear method). 	20

	<ol style="list-style-type: none"> 3. Cytological technique of making (Mitosis and Meiosis) permanent slides. 4. Observation of polythene and lamp brush chromosomes (Permanent slides). 5. Genetics problems based on theory syllabus – monohybrid, dihybrid, test cross and interaction of factors. 	
II	<ol style="list-style-type: none"> 1. Study of ecological adaptations – (morphological and anatomical) Hydrophytes, Xerophytes, Halophytes and Epiphytes (2 each). 2. Analysis of water samples for pH, Chloride, CO₂, Dissolved Oxygen and total hardness. 3. Determination of minimal quadrat size for the study of herbaceous vegetation in the college campus, by species area curve method (species to be listed) 	10
III	<ol style="list-style-type: none"> 1. Quantitative analysis of herbaceous vegetation in the college campus for frequency and comparison with Raunkiaer's frequency distribution law. 2. Study of biotic interactions of the following: Stem parasite, Root parasite, Epiphytes, Predation (Insectivorous plants) 	10
IV	<ol style="list-style-type: none"> 1. Trip to nearby forest at least for 3 days to study the vegetation and submit a report. 2. Quantitative analysis of herbaceous vegetation for density and abundance in the college campus. 3. Visit to a pond / forest to study communities. 	08

4TH SEMESTER

DETAILED SYLLABUS OF 4TH SEMESTER

Paper I: PLANT SYSTEMATICS

Subject Code: BOT142C401, L-T-P-C=4-1-0-5, Credit Units: 05

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>To introduce the techniques of plant identification.</p> <p>To acquaint the students to various techniques of herbarium making.</p> <p>To introduce the students to various families of angiosperms through study of type specimen.</p> <p>To provide the students with a basic concept on angiosperm evolution.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p>	<p>The course will enable students to understand the classification of plants.</p> <p>The student will have a practical knowledge on the different types of families of angiosperms.</p> <p>The student can understand the evolutionary changes in angiosperms.</p> <p>The students can have hands on experience on how to observe local vegetation and make herbaria from nearby local vegetation.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course content	Periods
I	<p>Significance of Plant systematic: Introduction to systematics; Plant identification, Classification, Nomenclature. Evidences from palynology, cytology, phytochemistry and molecular data. Field inventory; Functions of Herbarium; Important herbaria and botanical gardens of the world and India;</p>	18

	Virtual herbarium; E-flora; Documentation: Flora, Monographs, Journals; Keys: Single access and Multi-access. Concept of taxa (family, genus, species); Categories and taxonomic hierarchy; Species concept (taxonomic, biological, evolutionary). Botanical nomenclature: Principles and rules (ICN); Ranks and names; Typification, author citation, valid publication, rejection of names, principle of priority and its limitations; Names of hybrids.	
II	Systems of classification: Major contributions of Theophrastus, Bauhin, Tournefort, Linnaeus, Adanson, de Candolle, Bessey, Hutchinson, Takhtajan and Cronquist. Classification systems of Bentham and Hooker (upto series) and Engler and Prantl (upto series). Brief reference of Angiosperm Phylogeny Group (APG III) classification. Biometrics, numerical taxonomy and cladistics Characters; Variations; OTUs, character weighting and coding; Cluster analysis; Phenograms, cladograms (definitions and differences).	16
III	Family studies: Affinities, phylogeny, economic importance and comparative studies of the following families: Magnoliaceae, Fabaceae, Malvaceae, Euphorbiaceae, Solanaceae, Verbenaceae, Lamiaceae, Rubiaceae, Cucurbitaceae, Asteraceae. Arecaceae, Poaceae, Musaceae, Zingiberaceae, Liliaceae, Orchidaceae	18
IV	Phylogeny of Angiosperms: Terms and concepts (primitive and advanced, homology and analogy, parallelism and convergence, monophyly, Paraphyly, polyphyly and clades). Origin and evolution of angiosperms; Co-evolution of angiosperms and pollinators. Methods of illustrating evolutionary relationship (phylogenetic tree, cladogram).	12

Paper II: REPRODUCTIVE BIOLOGY OF ANGIOSPERMS

Subject Code: BOT142C402, L-T-P-C= 4-1-0-5, Credit Units: 05

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>To acquaint the students about the development of flower.</p> <p>To introduce the students to various stages of development of male and female gametophytes.</p> <p>To introduce the students to various stages of fertilization.</p> <p>To introduce the students to various incompatibilities.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p>	<p>The course will enable students to understand the process of fertilization.</p> <p>The student will get the basic concept of double fertilization and its significance.</p> <p>The students will have an idea on types of ovules and pollen grains belonging to different families of angiosperms.</p> <p>The students will undertand the developmental stages of an embryo and this knowledge can be later on used for plant tissue culture.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course content	Periods
I	<p>Reproductive development: Induction of flowering; flower as a modified determinate shoot. Flower development: genetic and molecular aspects. Anther and pollen biology Anther wall: Structure and functions, microsporogenesis, callose deposition and its significance. Microgametogenesis; Pollen wall structure, MGU (male germ unit) structure, NPC system. Palynology and scope (a brief account); Pollen wall proteins; Pollen viability, storage and germination. Abnormal features: Pseudomonads, polyads, massulae, pollinia. Scope and process of palynology.</p>	16
II	<p>Ovule Structure, pollination and double fertilization: Ovule Structure; Types; Special structures–endothelium, obturator, aril, caruncle and hypostase. Female gametophyte– megasporogenesis (monosporic, bisporic and tetrasporic) and megagametogenesis (details of <i>Polygonum</i> type). Organization and ultrastructure of mature embryo sac. Pollination and fertilization Pollination types and significance; adaptations; structure of stigma and style; path of pollen tube in pistil. Double fertilization.</p>	16
III	<p>Self incompatibility: Self incompatibility Basic concepts (interspecific, intraspecific, homomorphic, heteromorphic, GSI and SSI). Methods to overcome self- incompatibility: mixed pollination, bud pollination, stub pollination. Intra-ovarian and in vitro pollination. Modification of stigma surface, parasexual hybridization; Cybrids, in vitro fertilization.</p>	16
IV	<p>Embryo, Endosperm and Seed Structure and types: General pattern of development of dicot and monocot embryo and endosperm. Suspensor: structure and functions; Embryo-endosperm relationship, Nutrition of embryo. Unusual features; Embryo development in <i>Paeonia</i>. Seed structure, importance and dispersal mechanisms. Polyembryony and apomixes: Introduction; Classification; Causes and applications.</p>	16

Paper III: PRACTICAL-III
Subject Code: BOT142C414, L-T-P-C= 0-0-4-4, Credit Units: 04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
To impart practical knowledge on various families of angiosperms. To give a brief idea on the various reproductive structures of angiosperm flowers.	Hands on activity or Laboratory work	The course will help the students to gain on field knowledge of identifying various plants. They will be equipped to understand different reproductive structures and processes of angiosperms.	Continuous evaluation: 25% (skill test, lab copy, practical viva, lab involvement/ performance) (any five). Attendance: 5% End term examination: 70 %

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course content	Periods
I	Study of vegetative and floral characters of the families studied in the theory and which are locally available (Description, V.S. flower, section of ovary, floral diagram/s, floral formula/e and systematic position according to Bentham & Hooker's system of classification).	12
II	Field visit (local). Mounting of 5 properly dried and pressed specimen of any wild plant with herbarium label (to be submitted in the record book). Preparation of virtual/digital herbarium.	12
III	Anther: types and stages of development. Tapetum (amoeboid and glandular); MMC, spore tetrads (slides/photographs, fresh material). Uninucleate, bicelled and dehisced anther stages through slides/micrographs, male germ unit (MGU) through photographs and schematic representation. Pollen grains: Fresh and acetolyzed showing ornamentation and aperture, pseudomonads, polyads, pollinia (slides/photographs, fresh material), ultrastructure of pollen wall (micrograph); Pollen viability: Tetrazolium test. Germination: Calculation of percentage germination in different media using hanging drop method.	12
IV	Ovule: Types-anatropous, orthotropous, amphitropous/campylotropous, circinotropous, unitegmic, bitegmic; tenuinucellate and crassinucellate; Special structures: Endothelium, obturator, hypostase, caruncle and aril (permanent slides/specimens/photographs). Female gametophyte through permanent slides/photographs: Types, ultrastructure of mature egg apparatus. Endosperm: types of endosperm with the help of photographs. Embryogenesis: Study of development of dicot embryo through permanent slides; Study of suspensor through photographs.	12

5TH SEMESTER

DETAILED SYLLABUS OF 5TH SEMESTER

Paper I: PLANT PHYSIOLOGY

Subject Code: BOT142C501, L-T-P-C=3-1-0-4, Credit Units:04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>To acquaint the students with the various physiological processes inside the plant body.</p> <p>To make them understand the important life processes of plants.</p> <p>To help them understand the functions of various hormones as well as pigments present in plants.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p>	<p>The students will have a concept on different physiological processes of plants on completion of this course.</p> <p>They will gain ideas on different factors effecting the physiological process.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course Contents	Periods
I.	Plant-water relations: Plant-water relations: Water Potential and its components, water absorption by roots, aquaporins, pathway of water movement. Symplast, apoplast, transmembrane pathways, root pressure,	16

	guttation. Ascent of sap– cohesion-tension theory. Transpiration and factors affecting transpiration, antitranspirants, mechanism of stomatal movement.	
II.	Mineral nutrition: Mineral nutrition: Essential and beneficial elements, macro and micronutrients. Methods of study and use of nutrient solutions, criteria for essentiality. Mineral deficiency symptoms, roles of essential elements, chelating agents. Nutrient Uptake. Soil as a nutrient reservoir, transport of ions across cell membrane, passive absorption, electrochemical gradient, facilitated diffusion, active absorption, role of ATP, carrier systems, proton ATPase pump and ion flux, uniport, co-transport, symport, antiport. Translocation in the phloem :Experimental evidence in support of phloem as the site of sugar translocation. Pressure–Flow Model; Phloem loading and unloading; Source–sink relationship	16
III.	Plant growth regulators: Plant growth regulators (Discovery, chemical nature (basic structure). Bioassay and physiological roles of Auxin, Gibberellins, Cytokinin, Abscisic acid, Ethylene, Brassinosteroids and Jasmonic acid.	16
IV	Physiology of flowering; Photoperiodism, flowering stimulus, florigen concept, Vernalization. Seed dormancy. Phytochrome , cryptochromes and phototropins. Discovery, chemical nature, role in photomorphogenesis, low energy responses (LER) and high irradiance responses (HIR), mode of action.	16

Paper II: PLANT METABOLISM
Subject Code: BOT142C502, L-T-P-C=3-1-0-4, Credit Units: 04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>The students will develop the basic concept of metabolic processes in the plant body.</p> <p>The students will have an idea regarding role of enzymes in the metabolism.</p> <p>The students will have a basic idea about different cycles like TCA inside the plant body.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p>	<p>The students will have a concept on different metabolism of plants on completion of this course.</p> <p>They will gain ideas on various metabolic cycles and factors affecting them.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course Contents	Periods
I.	Concept of metabolism: Introduction, anabolic and catabolic pathways, regulation of metabolism. Role of regulatory enzymes (allosteric ,covalent modulation and Isozymes). Carbon assimilation Historical background, photosynthetic pigments. Role of photosynthetic pigments (chlorophylls and accessory pigments), antenna molecules and reaction centres, photochemical reactions, photosynthetic electron transport, PSI, PSII, Q cycle, CO ₂ reduction. Photorespiration, C ₄ pathways; Crassulacean acid metabolism; Factors affecting CO ₂ reduction. Carbohydrate metabolism Synthesis and catabolism of sucrose and starch.	18
II.	Metabolic pathways: Carbon Oxidation: Glycolysis, fate of pyruvate, regulation of glycolysis. Oxidative pentose phosphate pathway, oxidative decarboxylation of pyruvate, regulation of PDH, NADH shuttle. TCA cycle,amphibolic role, anaplerotic reactions, regulation of the cycle, mitochondrial electron transport, oxidative phosphorylation, cyanide-resistant respiration, factors affecting respiration. ATP-Synthesis Mechanism of ATP synthesis, substrate level phosphorylation, chemiosmotic mechanism (oxidative and photophosphorylation), ATP synthase, Boyers conformational model, Racker's experiment, Jagendorf's experiment; role of uncouplers.	18
III.	Metabolic pathways: Lipid metabolism: Synthesis and breakdown of triglycerides, β -oxidation, glyoxylate cycle, gluconeogenesis and its role in mobilisation of lipids during seed germination, α oxidation. Nitrogen metabolism Nitrate assimilation, biological nitrogen fixation (examples of legumes and non-legumes); Physiology and biochemistry of nitrogen fixation; Ammonia assimilation and transamination.	18

IV	Signal transduction: Mechanisms of signal transduction: Receptor-ligand interactions; Second messenger concept, Calcium calmodulin, MAP kinase cascade.	10
Total		64

-

Paper III: PRACTICAL-III
Subject Code: BOT142C514, L-T-P-C= 0-0-4-4, Credit Units: 04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
To impart practical knowledge on various physiological and metabolic processes of plants.	Hands on activity or Laboratory work	The course will help the students to gain knowledge on metabolism of plants. They will be equipped to understand different physiological processes of angiosperms through laboratory experiments.	Continuous evaluation: 25% (skill test, lab copy, practical viva, lab involvement/ performance) (any five). Attendance: 5%

			End term examination: 70 %
--	--	--	-------------------------------

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course content	Periods
I	<p>Determination of osmotic potential of plant cell sap by plasmolytic method.</p> <p>Determination of water potential of given tissue (potato tuber) by weight method.</p> <p>Study of the effect of wind velocity and light on the rate of transpiration in excised twig/leaf.</p> <p>Study the induction of amylase activity in germinating barley grains.</p> <p>Demonstration of suction due to transpiration.</p> <p>Demonstration of fruit ripening/Rooting from cuttings.</p>	12
II	<p>Calculation of stomatal index and stomatal frequency from the two surfaces of leaves of a mesophyte and xerophyte.</p> <p>To calculate the area of an open stoma and percentage of leaf area open through stomata in a mesophyte and xerophyte (both surfaces). To study the phenomenon of seed germination (effect of light).</p> <p>To study the effect of different concentrations of IAA on Avena coleoptile elongation (IAA Bioassay).</p>	12
III	<p>Chemical separation of photosynthetic pigments.</p> <p>Experimental demonstration of Hill's reaction.</p> <p>To study the effect of light intensity on the rate of photosynthesis.</p> <p>Effect of carbon dioxide on the rate of photosynthesis.</p>	12
IV	<p>To compare the rate of respiration in different parts of a plant.</p> <p>To demonstrate activity of Nitrate reductase in germinating leaves of different plant sources.</p> <p>To study the activity of lipases in germinating oilseeds and demonstrate mobilization of lipids during germination.</p>	12

	Demonstration of fluorescence by isolated chlorophyll pigments.	
	Demonstration of absorption spectrum of photosynthetic pigments	
Total		48

DISCIPLINE SPECIFIC PAPERS (ONLY ONE TO BE SELECTED)

PAPER III: RESEARCH METHODOLOGY

SUBJECT CODE: BOT142D501, L-T-P-C= 3-1-2-6, CREDIT UNITS: 06

Continuous evaluation: 15% (assignment, Class test, seminar, lab experiment, lab copy, practical viva) (any three)

- Mid-term examination: 10%
- Attendance: 5%
- End term examination: 70 %

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
To make students understand the overall process of designing a research study from its inception to its report. To make them understand the way of writing various research article,	Lecture Presentation Assignment Individual/group presentation Laboratory work	To know how to identify a research problem Understand importance of educational research Understand basics of research design	Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three)) Mid-term examination: 10% Attendance: 5%

papers and proposals. To acquaint them with the methods of data collection.			End term examination: 70%
--	--	--	---------------------------

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus:

Modules	Course content	Periods
I	Research fundamentals and terminology: Foundations of Research: Meaning, Objectives, Motivation, Utility and Understanding the language of research Concept, Construct, Definition, Variable. Concept of hypothesis, theory and scientific law. Difference between hypothesis, theory and scientific law. Formulation of hypothesis.	16
II	Data collection: Understand concepts of quantitative and qualitative data collection. Types of data and methods and techniques of data collection. Methods of primary data collection (observation/ experimentation/ questionnaire/ interviewing/ case/ pilot study). Methods of secondary data collection (internal/ external), schedule method. Use of computers in data collection: Literature survey using web, handling search engines.	16
III	Data analysis: Methods to analyze data and Elements of analysis in data processing. The different conventions for scholarly/ report writing. Experimental data collection and data processing, Processing operations, problems in processing. Software for data processing.	16
IV	Report writing and presentation: poster and oral presentations. Types of research reports, guidelines for writing a report, report format, appendices, project proposals. Miscellaneous information. Writing of review of literature.	16
Total		64

Practical:

1. Assignments on report writing.
2. Assignments on project proposal writing.

3. Assignments on review of literature.

Text Books:

1. C.R.Kothari . Research Methodology: Methods And Techniques. 2019. New Age Publ. Wiley Eastern,
2. P.S.G. Kumar (2004). Research methods and statistical techniques. B.R. publishing Academy, Udaypur.
3. Ranjit kumar. Research methodology: a step by step guide for beginners. 2019. Sage Publication.

Reference Books:

1. Select references from the Internet.
2. Wayne C. Booth *et al.* The craft of research. 2016. University of Chicago Press.

PAPER IV: ANALYTICAL TECHNIQUES IN PLANT SCIENCE
SUBJECT CODE: BOT142D502, L-T-P-C-3-1-2-6, CREDIT UNITS: 06

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>Help the students understand the use of major laboratory instruments.</p> <p>Help students understand the different techniques related to research.</p> <p>Acquaint the students about the use of biostatistics.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p> <p>Laboratory work</p>	<p>The student will gain knowledge on new tools and techniques in involved in plant research.</p> <p>The course will make the student learn the different statistical tools in research.</p> <p>The course will help the students to make different types of herbaria.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus:

Modules	Course content	Periods
I	Microscopy: Principles of microscopy, different types of microscope. Basic of staining and imaging techniques. Basic microbiological techniques. Principles of spectrophotometry. pH, electrophoresis, AGE, PAGE, SDS-PAGE, centrifugation and chromatography. Paper chromatography; Column chromatography, TLC, GLC, HPLC, Ion-exchange chromatography; Molecular sieve chromatography; Affinity chromatography.	16
II	Bioinformatics: Basic of bioinformatics. Biological database, data search sequencing methods, fundamentals of computer programming, protein structure analysis.	16
III	Biostatistics : The scope of biostatistics; Exploration and presentation of data: (Scales of measurement, Tables, Graphs, Histograms, Box and Whisker plots, Frequency polygon, Scatter Plots). Measures of central tendency, Statistical software packages and their importance in data analysis	16
IV	Herbarium techniques - drying, poisoning, pressing, labeling, cataloging and preservation. Microtomy: Principles, sample preparation, block preparation, sectioning, staining and mounting.	16
Total		64

Practical :

1. Laboratory visit and field report.
2. Application of statistical knowledge to different research problems.

Text Books:

1. Attwood TK and Parry-Smith DJ (2004) Introduction to Bioinformatics, Pearson Education (Singapore) Pvt. Ltd.
2. David Edwards (Ed.) (2007) Plant Bioinformatics: Methods and Protocols, Humana Press, New Jersey, USA.

Reference Books:

1. Kulas JT (2008) SPSS Essential: Managing and Analyzing Social Science Data. John Wiley & Sons, New York.
2. Selected references from internet.

6TH SEMESTER

DETAILED SYLLABUS OF 6TH SEMESTER

Paper I: Plant Biotechnology,

Subject Code: BOT142C601, L-T-P-C=3-1-0-4, Credit Units: 04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>To acquaint the students with various fields of biotechnology.</p> <p>To acquaint the students with techniques of plant tissue culture, R-DNA technology, gene cloning etc.</p> <p>To help the students to understand the various applications of plant biotechnology.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p> <p>Laboratory work</p>	<p>The student will gain knowledge on various techniques of biotechnology and prepare for various fields of research.</p> <p>The student will also gain knowledge on applied aspects of biotechnology and can become ready for various biotechnology based companies.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus :

Modules	Course Contents	Periods
I.	<p>Plant Tissue Culture: Plant Tissue Culture: Historical perspective. Composition of media; Nutrient and hormone requirements (role of vitamins and hormones). Totipotency; Organogenesis; Embryogenesis (somatic and zygotic); Protoplast isolation, culture and fusion; Tissue culture applications (micropropagation, androgenesis, virus elimination, secondary metabolite production, haploids, triploids and hybrids; Cryopreservation; Germplasm Conservation).</p>	16
II.	<p>Recombinant DNA technology: Restriction Endonucleases (History, Types I-IV, biological role and application). Restriction Mapping (Linear and</p>	16

	Circular). Cloning Vectors: Prokaryotic (pUC 18 and pUC19, pBR322, Ti plasmid, BAC); Lambda phage, M13 phagemid, Cosmid, Shuttle vector; Eukaryotic Vectors (YAC).	
III.	Gene Cloning and Recombinant DNA: Bacterial Transformation and selection of recombinant clones. PCR mediated gene cloning; Gene Construct; construction of genomic and cDNA libraries, screening DNA libraries to obtain gene of interest by genetic selection; complementation, colony hybridization; PCR Methods of gene transfer Agrobacterium-mediated, Direct gene transfer by Electroporation, Microinjection, Microprojectile bombardment; Selection of transgenics– selectable marker and reporter genes (Luciferase, GUS, GFP).	16
IV	Applications of Biotechnology: Pest resistant (Bt-cotton); herbicide resistant plants (RoundUp Ready soybean). Transgenic crops with improved quality traits (Flavr Savr tomato, Golden rice). Improved horticultural varieties (Moondust carnations); Role of transgenics in bioremediation (Superbug); Edible vaccines; Industrial enzymes (Aspergillase, Protease, Lipase). Genetically Engineered Products–Human Growth Hormone; Humulin; Biosafety concerns.	16
Total		64

PAPER II: MOLECULAR BIOLOGY,
Subject Code: BOT142C602, L-T-P-C= 3-1-0-4, Credit Units: 04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>To impart knowledge on different types of hereditary material.</p> <p>To impart knowledge on replication of DNA upto molecular level.</p> <p>To give a brief idea on proteins and transcription.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p> <p>Laboratory work</p>	<p>The course will</p> <p>1. Strengthen the concepts on DNA replication, transcription etc. at molecular level.</p> <p>2. Help the students to design experiments based on molecular level.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus:

Modules	Course Contents	Periods
I.	<p>Nucleic acids: Nucleic acids: Carriers of genetic information Historical perspective; DNA as the carrier of genetic information (Griffith's, Hershey & Chase, Avery, McLeod & McCarty, Fraenkel-Conrat's experiment. The Structures of DNA and RNA (Genetic Material) DNA Structure: Miescher to Watson and Crick- historic perspective, DNA structure, Salient features of double helix, Types of DNA. Types of genetic material, denaturation and renaturation, cot curves; Organization of DNA- Prokaryotes, Viruses, Eukaryotes. RNA Structure. Organelle DNA -mitochondria and chloroplast DNA. The Nucleosome, Chromatin structure- Euchromatin, Heterochromatin- Constitutive and Facultative heterochromatin.</p>	16

II.	<p>Replication of DNA: The replication of DNA Chemistry of DNA synthesis (Kornberg's discovery); General principles – bidirectional, semiconservative and semi discontinuous replication, RNA priming; Various models of DNA replication, including rolling circle, θ (theta) mode of replication, replication of linear ds-DNA, replication of the 5' end of linear chromosome. Enzymes involved in DNA replication. Central dogma and genetic code. Key experiments establishing-The Central Dogma (Adaptor hypothesis and discovery of mRNA template), Genetic code (deciphering & salient features).</p>	16
III.	<p>Transcription : Transcription in prokaryotes and eukaryotes.</p> <p>Principles of transcriptional regulation. Prokaryotes: Regulation of lactose metabolism and tryptophan synthesis in E.coli. Eukaryotes: transcription factors, heat shock proteins, steroids and peptide hormones; Gene silencing.</p>	16
IV	<p>Processing and modification of RNA: Processing and modification of RNA Split genes-concept of introns and exons, removal of introns, spliceosome machinery, splicing pathways, group I and group II intron splicing, alternative splicing eukaryotic mRNA processing(5' cap, 3' polyA tail); Ribozymes; RNA editing and mRNA transport. Translation Ribosome structure and assembly, mRNA; Charging of tRNA, aminoacyl tRNA synthetases; Various steps in protein synthesis, proteins involved in initiation, elongation and termination of polypeptides; Fidelity of translation; Inhibitors of protein synthesis;</p> <p>Post-translational modifications of proteins.</p>	16
Total		64

Reference Books:

References will be given based on latest research papers.

Paper III: PRACTICAL-III

Subject Code: BOT142C614, L-T-P-C= 0-0-4-4, Credit Units: 04

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
To impart practical knowledge to students on various techniques of DNA isolation, gene transfer etc. To give them the concept of in vitro sterilization, and various types of cultures done now a days for plant propagation.	Hands on activity or Laboratory work	The student will have a hand on knowledge of laboratory techniques required for biotechnology based processes. They will gather latest knowledge on GM crops, DNA replication etc.	Continuous evaluation: 25% (skill test, lab copy, practical viva, lab involvement/ performance) (any five). Attendance: 5% End term examination: 70 %

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus

Modules	Course content	Periods
I	Preparation of LB medium, Preparation of MS medium and raising E.Coli., Isolation of genomic DNA from E.Coli., DNA isolation from cauliflower head, DNA estimation by diphenylamine reagent/UV Spectrophotometry. (All	12

	<p>practicals to be done in laboratory subject to availability and use of educational videos for ready reference).</p> <p>Study of DNA replication mechanisms through photographs (Rolling circle, Theta replication and semi-discontinuous replication), Study of structures of prokaryotic RNA polymerase and eukaryotic RNA polymerase II through photographs, Photographs establishing nucleic acid as genetic material (Messelson and Stahl's, Avery et al, Griffith's, Hershey & Chase's and Fraenkel & Conrat's experiments)</p>	
II	<p>Demonstration of in vitro sterilization and inoculation methods using leaf and nodal explants of tobacco, <i>Datura</i>, <i>Brassica</i> etc. Study of anther, embryo and endosperm culture, micropropagation, somatic embryogenesis & artificial seeds through photographs.</p>	12
III	<p>Construction of restriction map of circular and linear DNA from the data provided. Study of methods of gene transfer through photographs: Agrobacterium-mediated, direct gene transfer by electroporation, microinjection, microprojectile bombardment.</p> <p>Study of steps of genetic engineering for production of Bt cotton, Golden rice, Flavr Savr tomato through photographs.</p>	12
IV	<p>Isolation of protoplasts, Isolation of plasmid DNA. Restriction digestion and gel electrophoresis of plasmid DNA. (All practicals to be done in laboratory subject to availability and use of educational videos for ready reference).</p>	12

DISCIPLINE SPECIFIC PAPERS (ONLY ONE TO BE SELECTED)

PAPER III: PLANT DIVERSITY AND HUMAN WELFARE
SUBJECT CODE: BOT142D601, L-T-P-C=3-1-2-6, CREDIT UNITS: 06

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
The course has been designed to introduce the students to - Various diversity found in plant world. Impart traditional knowledge of plants. Application of plants in human society.	Lecture Presentation Assignment Individual/group presentation Laboratory work	The student will gain knowledge on plant biodiversity and its scope. The course will make the student learn the management of plant diversity and role of various world organizations in this regard. The course will help the students to have an understanding of ethnobotany.	Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three)) Mid-term examination: 10% Attendance: 5% End term examination: 70%

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus:

Modules	Course content	Periods
I	Plant diversity and its scope: Genetic diversity, Species diversity, Agrobiodiversity and cultivated plant taxa, wild taxa. Values and uses of Biodiversity, Uses of plants, Uses of microbes. Loss of genetic diversity, Loss of species diversity, Loss of ecosystem diversity, Loss of agrobiodiversity, Projected scenario for biodiversity loss.	16
II	Management of Plant Biodiversity: Organizations associated with biodiversity management-Methodology for execution IUCN, UNEP, UNESCO, WWF, NBPGR; Biodiversity legislation and conservations, Biodiversity information management and communication. Conservation of Biodiversity: Conservation of genetic diversity, species diversity and ecosystem diversity, In situ and ex situ	16

	conservation, Social approaches to conservation, Biodiversity awareness programmes, Sustainable development.	
III	Role of plants in relation to Human Welfare; a) Importance of forestry their utilization and commercial aspects b) Avenue trees, c) Ornamental plants of India. d) Alcoholic beverages through ages. Fruits and nuts: Important fruit crops their commercial importance. Wood and its uses.	16
IV	Ethnic groups and their life styles. Medico-ethnobotanical resources in India with special reference to NE states. Socio-economy and other aspects of Ethnobotany with reference to: Food, Intoxicants and Beverages, Ropes and Binding Materials, Resins and Oils, Cosmetics, Ornamentals, Fodder, Medicinal and Aromatic properties. Medicinal and Aromatic plants-Abundance, conservation and utilization in respect to N.E. India,	16
Total		64

Practical (2 hours of practical per week):

1. Preparation of report on traditional plant knowledge.
2. Field visit to nearby areas and compilation of field notes and identification, field notes.
3. Visual and digital records and preparation of herbarium, especially of the following categories (1 each) – oils, medicines, food.

Text Books

1. Cotton C.M. (1997) Ethnobotany – Principles and applications. John Wiley and sons. Chichester.
- Faulks, P.J. 1958. An introduction to Ethnobotany, Moredale Pub. Ltd., London.
2. Jain S.K., (ed.) 1981. Glimpses of Indian Ethnobotany, Oxford and I B.H., New Delhi.
3. Jain S.K., 1995 Manual of Ethnobotany, Scientific Publishers, Jodhpur

Reference Books

1. Martin, G.J. 1996, Ethnobotany, A methods manual, Chapman & Hall, London.
2. Schultes, R.E. 1995. Ethnobotany, Chapman and Hall.
3. Krishnamurthy, K.V. A textbook of Biodiversity. 2004. Science Publishers Inc., Enfield, New Hampshire, USA.

PAPER IV: INDUSTRIAL AND ENVIRONMENTAL MICROBIOLOGY

SUBJECT CODE: BOT142D602, L-T-P-C= 3-1-2-6, CREDIT UNITS: 06

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>Help the students to understand the application of microbes in human society.</p> <p>Help the students give an idea about various techniques such as fermentation used in industries.</p> <p>Application of microbes in combating pollution.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p> <p>Laboratory work</p>	<p>The student will gain knowledge on application of microbes in various industrial processes.</p> <p>The course will make the student learn the concept of biofuels and biopolymers.</p> <p>The course will help the students to deduce a relationship between renewable sources and microbial metabolism.</p>	<p>Continuous evaluation: 15% (assignment, class test, practical viva, seminar, quiz (any three))</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70%</p>

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus:

Modules	Course content	Periods
I	<p>Bioprocess Technology and Engineering: Microbial growth kinetics- Batch culture, continuous culture, industrial applications of continuous culture processes, fed-batch culture. The isolation, preservation and improvement of industrially important and useful microorganisms. Industrial fermentation- typical media, media formulation, water, energy and carbon sources, nitrogen sources, minerals, vitamin sources, nutrient recycle, buffers, precursors and metabolic regulators, oxygen requirement.</p>	16
II	<p>Microbial production of metabolites: Microbial production of Primary and secondary metabolites. Commercial production of antibiotics with special reference to penicillin, streptomycin and their derivatives.</p> <p>Microbial transformations: steroids and alkaloids production. Large scale production of recombinant molecules interferon, human proteins insulin, somatostatin, vaccines and anticancer agents.</p>	16

III	Biofuels and Biopolymers; Biofuels (ethanol and methane) from organic residues; fuels from algae. Biopolymers and EPS, Bioplastics, Biosurfactants, effluent treatment, SCP	16
IV	Renewable bioenergy using microorganisms Methanogenesis, Methane production by anaerobic digestion of waste organic materials. Bioethanol and Biobutanol production by using microorganisms. Biohydrogen Generation, Microbial Fuel. Biodiesel from algae.	16
Total		64

Practical (2 hours of practical per week):

Seminar presentation based on the syllabus.

Text Books:

1. Casida L.E.J.R. Industrial Microbiology. 2019. New Age International Publishers.
2. Reed. G. Prescott & Dunn's Industrial Microbiology. 2004. CBS Publishers.
3. Patel A.H. Industrial Microbiology. 2015. Laxmi Publications.
4. Buckley R.G. Environmental Microbiology. 2016. CBS Publishing.
5. Ramesh K.V. Environmental Microbiology. 2019. Mjp Publishers

Reference Books:

Selected research papers from the internet will be given to study.

**GENERIC ELECTIVE PAPERS
SYLLABUS FOR 1ST, 2ND, 3RD, 4TH
SEMESTERS**

DETAILED SYLLABUS FOR GENERIC ELECTIVE PAPERS

1st Semester

PAPER GEI: BIODIVERSITY IN PLANTS
SUBJECT CODE: BOT142G101, CREDIT UNITS: 2+0+1=3

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
Develop an understanding of the various groups of Plant kingdom Acquire knowledge about the evolution from lower plants to higher plants in the Plant kingdom.	Lecture Presentation Assignment Individual/group presentation Laboratory work	The course will impart 1. Thorough knowledge about various plant groups of plants from primitive to highly evolved. 2. Foundation for further studies in Botany.	Continuous Evaluation: 15% (Skill Test, lab copy, Practical viva, lab involvement, Any Three) Mid-term examination: 10% Attendance: 5% End term examination: 70 %

Prerequisite: Basic knowledge of biology of class XII.

Module/ Experiment	Topic and Course content	Periods/ Lectures
Theory		
I	Microbes: Discovery, general characteristics and economic importance of viruses and bacteria.	08
II	Algae: General characteristics, range of thallus organization, reproduction, ecological and economic importance of algae. Fungi: General characteristics, range of thallus organization, reproduction, ecological and economic importance of fungi. General account and significance of symbiotic associations: Lichens and Mycorrhiza.	08
III	Archegoniates: Unifying features, Bryohytes: General characteristics, range of thallus organization, reproduction, ecological and economic importance, adaptation to land habit. Pteridophytes: General characteristics, ecological and economic importance.	08
IV	Gymnosperms: General characteristics, ecological and economic importance. Angiosperms: General characteristics, ecological and economic importance	08
Total		32
Practical		

1	Study of preservation of botanical specimens, different instruments used in a laboratory and Microscopy and different sections of plant material and preparation of microscope slides.	1
2	Study of different staining procedures (single, double and Gram staining), Preparation of Gram stain and other important stains used in laboratory studies	2
3	Study of different types of bacteria through photographs and permanent slides	1
4	Study of various structures of <i>Nostoc</i> and <i>Fucus</i> through temporary preparations and permanent slides	2
5	Study of various structures of <i>Rhizopus</i> and <i>Agaricus</i> through temporary preparations and permanent slides	2
6	Study of various growth forms of lichen and different types of mycorrhiza through photographs	1
7	Study of various structures of <i>Marchantia</i> through temporary preparations and permanent slides	1
8	Study of various structures of <i>Selaginella</i> and <i>Equisetum</i> through temporary preparations and permanent slides	2
9	Study of various structures of <i>Cycas</i> and <i>Pinus</i> through temporary preparations and permanent slides	2
10	Study of floral structures of <i>Hibiscus</i> sp. and <i>Tagetes</i> sp. (Marigold).	1
	Total	16

PAPER GEII: NURSERY AND GARDENING
SUBJECT CODE: BOT142G102, CREDIT UNITS: 2+0+1=3

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
To enable the students about different branches of nursery and gardening,	Lecture Presentation Assignment Individual/group presentation	The course will impart 1. Thorough knowledge about various plant groups of plants from	Continuous Evaluation: 15% (Skill Test, lab copy, Practical viva, lab

importance and scope of reference to propagation techniques, canopy management, intercultural practices, diseases and disorders of nursery crops.	Laboratory work	primitive to highly evolved. 2. Foundation for further studies in Botany.	involvement, Any Three) Mid-term examination: 10% Attendance: 5% End term examination: 70 %
---	-----------------	--	--

Prerequisite: Basic knowledge of biology of class XII.

Detailed Syllabus:

Modules	Course content	Periods
I	Introduction to nursery techniques History and importance of nursery; role of Nursery; Guidelines for nursery raising; components of nursery; Layout and management of a good nursery, planting and layout of orchard, Types of nursery plant; nursery tools; Quality propagules production; selection of plants,	8
II	Propagation types, Seed extraction and storage of Nursery crops: Sexual and vegetative propagation, grafting, budding Air-layering. Propagation media and micro propagation, establishment of commercial nurseries-its merits and demerits. Seed extraction and storage of nursery plants; soil management, of rootstocks,	8
III	Production and management of Nursery crops: Production of nursery plant and gardening; Green house types; (Inter, mixed, multilayer) Types of chambers, poly house, net house, Advances of fruits and vegetables crops; Stress management of nursery crops and breeding of nursery crop), Bureau of Indian Standards (BIS-2008);	8
IV	AN INTRODUCTION TO GARDENING: Brief history of gardening, choice and selection of plants for garden , soil ,diseases and pests and its management; layout and designing of a gardening, types of landscaping garden; creative gardening	8
TOTAL		32

Practical (1 hours of practical per week)

1. To make an assessment of guidelines of nursery
2. Layout of nursery and propagation of nursery crop through hydroponics

3. Propagation of selected nursery crops suited to local condition
4. Grafting, budding and micro propagation of selected nursery crops
5. Raising rooting from cuttings in selected nursery crops
6. Projects based on theory course

Textbooks :

2nd Semester

PAPER GEIII: MUSHROOM CULTIVATION, SUBJECT CODE: BOT142G201, CREDIT UNITS: 2+0+1=3

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
The course has been designed with the objectives: To Identify edible types in mushroom, Selection of appropriate cultivation sites , Designing and construction of Mushroom Farm, Packaging, storing and grading of Mushrooms.	Lecture Presentation Assignment Individual/group presentation Laboratory work	The course will impart: Understanding of prospects of Mushroom cultivation The students will gain the knowledge of cultivation of different types of edible Mushroom. The students will gather concepts on the methods of harvesting of Mushroom and methods of grading, packing and storing of Mushroom.	Continuous Evaluation: 15% (Skill Test, lab copy, Practical viva, lab involvement, Any Three) Mid-term examination: 10% Attendance: 5% End term examination: 70 %

Prerequisite: Basic knowledge of biology of class XII.

Detailed syllabus

Module/ Experiment	Topic/ Course content	Periods/ Lectures
Theory		
I	Introduction to Mushroom Cultivation, Its natural growth aspects and climatic requirement, Mushroom edible types, Appropriate Mushroom Cultivation sites	08
II	Designing and construction of Mushroom farm, Role of composting in Mushroom Cultivation and methods of composting, Types of Mushroom growing facilities and fixtures, Disease control and pest management	08
III	Harvesting packaging & grading and storage of Mushroom, Post harvest procedures.	08
IV	Value added products of Mushroom.	08
Practical		
1	Project based on theory and local mushroom flora.	
Total		32

PAPER GEIV: PLANT ECOLOGY AND ECONOMIC BOTANY, SUBJECT CODE: BOT142G202, CREDIT UNITS: 2+0+1=3

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
The course has been designed with the objectives: To impart knowledge on interaction of plants with surrounding environments.	Lecture Presentation Assignment Individual/group presentation	The course will impart: 1. Thorough knowledge about various plant interactions and ecological factors.. 2. Foundation for application of plants for different economic uses.	Continuous Evaluation: 15% (Skill Test, lab copy, Practical viva, lab involvement, Any Three) Mid-term examination: 10%

<p>To impart knowledge on economic use of plants.</p> <p>To impart concept on vegetation in different zones of India.</p>	<p>Laboratory work</p>		<p>Attendance: 5%</p> <p>End term examination: 70 %</p>
---	------------------------	--	---

Prerequisite: Basic knowledge of biology of class XII.

Detailed syllabus

Module/ Experiment	Topic/ Course content	Periods/ Lectures
Theory		
I	<p>Introduction and Ecological factors: Roles played by soil, water, light, temperature. Adaptations of hydrophytes and xerophytes. Ecosystem and Plant communities: Ecosystem introduction, concept, definition, energy flow, food chain and food webs, ecological pyramids, general account of biogeo-chemical cycles, Ecotone and edge effect, succession, processes and types. Phytogeography: Principle biogeographical zones</p>	08
II	<p>Environmental pollution and Conservation:</p> <p>Environmental pollution with special reference to air and water pollution-causes, effects and control measures. Green-house effect.</p> <p>Types of <i>ex-situ</i> and <i>in-situ</i> conservation.</p>	08
III	<p>Origin of cultivated plants: Concept of centers of origin, their importance with reference to Vavilov's work. Cereals and Legumes: Rice and Wheat-origin, morphology and uses, General account of legumes.</p>	08
IV	<p>Spices, Condiments and Beverages: General account with special reference to black pepper and ginger, Tea- morphology, processing and uses. Oils and Fats and Fiber-yielding Plants: General description of oils and fats. General description with special reference to Cotton-(botanical name, family, arts used, morphology and uses)</p>	08
Practical		

1	Determination of soil pH, soil moisture, bulk density, porosity, rate of infiltration of water in soil and organic matter in three different soil samples.	04
2	Study of morphological adaptations of hydrophytes and xerophytes.	04
3	Determination of minimal quadrat size for the study of herbaceous vegetation in the college campus (species to be listed).	04
4	Study of economically important plants through specimens, sections and micro-chemical tests- Rice, Pea, Mustard, Neem, Sugar cane	04

Text Books:

1. Ghosh, Bhattacharyya and Hait. A textbook of Botany , Vol 1-4. 2015.NCBA Publishers

3rd Semester

PAPER GEV: BOTANY IN RURAL COMMUNITIES, SUBJECT CODE: BOT142G301, CREDIT UNITS: 2+0+1=3 (32 LECTURES+ 16 PRACTICALS)

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
The course has been designed with the objectives: To impart knowledge on rural areas use of plants and also basic concept of ethnobotany	Lecture Presentation Assignment Individual/group presentation Laboratory work	The course will impart: 1. Thorough knowledge about various ethnomedicines of NE India 2. traditional knowledge of prominent tribes of Assam	Continuous Evaluation: 15% (Skill Test, lab copy, Practical viva, lab involvement, Any Three) Mid-term examination: 10% Attendance: 5% End term examination: 70 %

Prerequisite: Basic knowledge of biology of class XII

Detailed syllabus

Module/ Experiment	Topic/ Course content	Periods/ Lectures
Theory		
I	Basic concept of society, community and groups, Characteristics and of rural communities, Scope and Importance of botany in Rural Economy and Employment Generation, Importance in food and nutritional security, Ecotourism.	08
II	Ethnobotany in North -east India: Methods to study ethnobotany; Applications of Ethnobotany: National interacts, Palaeo-ethnobotany.	08
III	Ethnomedicine, ethnoecology, ethnic communities of NE India. Application of natural products to certain diseases - Jaundice, cardiac, infertility, diabetics, Blood pressure and skin diseases	08
IV	Herbs used by dominant communities of Assam- Bodo, Tiwa, Karbi, Garo and Rabha in their day to day life.	08
Practical		
Project based on theory syllabus

Internet based latest research papers.

PAPER GEVI: PLANT BIOTECHNOLOGY, SUBJECT CODE: BOT142G302, CREDIT UNITS: 2+0+1=3

Course objective	Teaching- Learning Process	Learning Outcomes	Course evaluation
<p>To impart knowledge on plant tissue culture and R-DNA technology.</p> <p>To impart knowledge on application of plant biotechnology.</p> <p>To impart concept of transgenic crops.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p> <p>Laboratory work</p>	<p>The course will impart:</p> <p>Thorough knowledge about various applications of plant tissue culture.</p> <p>Foundation for application of plants biotechnology.</p>	<p>Continuous Evaluation: 15% (Skill Test, lab copy, Practical viva, lab involvement, Any Three)</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70 %</p>

Module/ Experiment	Topic/ Course content	Periods/ Lectures
Theory		
I	Plant Tissue Culture: Historical perspective; Composition of media; Nutrient and hormone requirements (role of vitamins and hormones); Totipotency; Tissue culture applications (micropropagation, androgenesis, virus elimination, secondary metabolite production, haploids, triploids and hybrids; Cryopreservation; Germplasm Conservation).	08
II	Recombinant DNA technology: Restriction Endonucleases (History, Types I-IV, biological role and application); Cloning Vectors: Prokaryotic (Ti plasmid, BAC); Lambda phage, Cosmid, Shuttle vector; Eukaryotic Vectors.	08
III	Gene Cloning: PCR mediated gene cloning; construction of genomic and cDNA libraries, screening of DNA libraries to obtain gene of interest by genetic selection; complementation, colony hybridization; PCR	08
IV	Applications of Biotechnology: Pest resistant, herbicide resistant plant, Transgenic crops and their role in bioremediation. Biosafety concerns.	08
Practical		
1	Study of anther, embryo and endosperm culture, micropropagation, somatic embryogenesis & artificial seeds through photographs.	04
2	Study of methods of gene transfer through photographs.	04
3	Study of steps of genetic engineering for production of Bt cotton, Golden rice, Flavr Savr tomato through photographs.	04
4	Laboratory visit	04

Text Books:

Prerequisite: Basic knowledge of biology of class XII

4th Semester

PAPER GEVII: MEDICINAL BOTANY, SUBJECT CODE: BOT142G401, CREDIT UNITS: 2+0+1=3

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
The course has been designed with the objectives: To impart knowledge medicinal values of various plants and their day to day applications in human life.	Lecture Presentation Assignment Individual/group presentation Laboratory work	The course will impart: 1. Thorough knowledge about various applications herbal medicine. 2. Foundation for application of herbal medicines or Ayurveda.	Continuous Evaluation: 15% (Skill Test, lab copy, Practical viva, lab involvement, Any Three) Mid-term examination: 10% Attendance: 5% End term examination: 70 %

Prerequisite: Basic knowledge of biology of class XII

Detailed syllabus

Module/ Experiment	Topic/ Course content	Periods/ Lectures
Theory		
I	History, Scope and Importance of Medicinal Plants. Indigenous Medicinal Sciences; Definition and Scope-Ayurveda: History, origin, panchamahabhutas, saptadhatu and tridosha concepts, Rasayana, plants used in ayurvedic treatments, Siddha: Origin of Siddha medicinal systems, Basis of Siddha system, plants used in Siddha medicine. Unani: History, concept: Umooor-e- tabiya, tumors treatments/therapy, polyherbal formulations.	08
II	Conservation of endangered and endemic medicinal plants. Definition: endemic and endangered medicinal plants, Red list criteria; In situ conservation: Biosphere reserves, sacred groves, National Parks; Ex situ conservation: Botanic Gardens, Ethnomedicinal plant Gardens. Propagation of Medicinal Plants: Objectives of the nursery, its classification, important components of a nursery, sowing, pricking, use	

	of green house for nursery production, propagation through cuttings, layering, grafting and budding.	
III	Pharmacognosy - systematic position m edicinal uses of the following herbs in curing various ailments; Tulsi, Ginger, Fenugreek, Indian Goose berry and Ashoka	08
IV	Morphology of plant part used, brief idea of cultivation and uses of the following: Cinchona, Rauwolfia, Atropa, Opium, Cannabis.	08
Practical		
Project based on theory syllabus		

Textbooks:

1. Trivedi P C, 2006. Medicinal Plants: Ethnobotanical Approach, Agrobios, India.
2. Purohit and Vyas, 2008. Medicinal Plant Cultivation: A Scientific Approach, 2nd edn. Agrobios, India.

PAPER GEVIII: ENVIRONMENTAL BIOTECHNOLOGY, SUBJECT CODE: BOT142G402, CREDIT UNITS: 2+0+1=3

Course objective	Teaching-Learning Process	Learning Outcomes	Course evaluation
<p>The course has been designed with the objectives:</p> <p>To impart knowledge on environmental technology.</p> <p>To impart knowledge on application of environmental biotechnology.</p>	<p>Lecture</p> <p>Presentation</p> <p>Assignment</p> <p>Individual/group presentation</p> <p>Laboratory work</p>	<p>The course will impart:</p> <ol style="list-style-type: none"> 1. Thorough knowledge about various applications of environmental technology. 2. Foundation for application of environmental biotechnology. 	<p>Continuous Evaluation: 15% (Skill Test, lab copy, Practical viva, lab involvement, Any Three)</p> <p>Mid-term examination: 10%</p> <p>Attendance: 5%</p> <p>End term examination: 70 %</p>

Prerequisite: Basic knowledge of biology of class XII

Detailed syllabus

Module/ Experiment	Topic/ Course content	Periods/ Lectures
Theory		
I	Introduction: Components of environment, atmosphere, lithosphere, hydrosphere, biosphere and anthroposystems, energy flow and ecosystem. Natural resources: Renewable and nonrenewable resources.	08
II	Concept of environmental technology, Impact of technology and growing population on environment, disasters management, acid rain and ozone depletion. Applications of Remote Sensing and Geographic Information System (GIS).	08
III	Technology to combat soil pollution: bioremediation, organic farming. Waste water treatment technologies. Management of solid waste.	08
IV	Conventional and non-conventional fuels, their environmental impacts, alternative energy sources, vehicular emission standards of fuel consumption, green buildings and rating systems.	08
Practical		
Project based on theory syllabus
